Transition Mistress after Easter for important high-class Private School in Home Counties, to teach general elementary subjects to children from 10 to 12. Trained teacher, Churchwoman. Res. £50 to £60.—A 40566.

Kindergarten Mistress in September for Dual School in China, to teach Singing throughout the School. Certificated, experienced. Res. about £120 and rooms, not board.—B 40542.

ART MISTRESSES.

Art Mistress after Easter for Public Dual School in Home Counties, to teach Drawing and Painting. Art Master's or some equivalent certificate and experience essential. Res. £60 to £70.—B 40254.

Art Mistress in September for high-class Private School in Canada, to teach Art throughout the School, and assist with elementary Form work. Non-res. about £150 and passage.—B 41003.

MUSIC MISTRESSES.

Music Mistress after Easter for small high-class Private School in Home Counties, to teach Piano-forte and Class Singing. German training preferred. Experience essential. Res. £60 to £80.—B 40440.

Music Mistress after Easter for Public Boarding and Day School on South Coast, to teach Piano-forte to prepare for L.R.A.M. Class Singing and Musical Appreciation. L.R.A.M. and school experience essential. Res. £70.—B 40843.

Music Mistress after Easter for high-class Private School on South-East Coast, to teach Piano-forte on Matthay or Clavier Method, Class Singing. Experience in resident post and in organizing Music teaching. Res. £45 to £50.—B 40928.

GYMNASTICS AND GAMES MISTRESSES.

Gymnastic and Games Mistress after Easter for high-class Private Boarding School in Home Counties. Swedish training, Osterberg preferred, with some school experience. Res. £100.—B 40630.

Gymnastics Mistress after Easter for high-class Private School in Canada. Non-res. about £150 and passage.—B 41002.

TECHNICAL MISTRESSES.

Teacher of Needlework and Dressmaking after Easter, able to teach students, for important Public School in South-West of England. Res. post with good salary.—B 40207.

Technical Mistress after Easter for Public Boarding School in the West of England, to teach Cookery, Laundrywork, the elements of Chemistry, and help with Lower Form work. Res. from £50 upwards.—B 40906.

FOREIGN MISTRESSES.

French Protestant Mistress after Easter for Public School in South of England. Certificated and experienced. Res. £80.—F 40924.

German Mistress after Easter for high-class Boarding School on South Coast. Must be able to offer some Music and have had experience in an English School. Res. £35 to £40.—F 40827.

STUDENT-TEACHERS.

Messrs. TRUMAN & KNIGHTLEY always have on their books a large number of Vacancies for **Student-Teachers** on mutual terms or at moderate premiums.

LADY MATRONS AND HOUSE MISTRESSES.

Messrs. TRUMAN & KNIGHTLEY assist qualified **Lady Matrons, Housekeepers, and House Mistresses** to find appointments in Boys' and Girls' Schools.

Ladies desiring further information of any of the above and of other suitable Vacancies should write fully to Messrs. TRUMAN & KNIGHTLEY, stating their age, qualifications, &c., and enclosing copies of their testimonials. **NO CHARGE OF ANY KIND** is made to applicants unless an engagement be secured through this Agency, when the terms are reasonable. Prospectus, terms, &c., will be forwarded on application.

SCHOOL TRANSFERS & PARTNERSHIPS.

A separate Department, under the personal management of one of the Directors, is devoted entirely to the negotiation of School Transfers and Partnerships.

No charge is made to purchasers.

A SELECTION FROM Messrs. Methuen's Educational Books.

Please write for a complete List of Methuen's School Books.

JUST PUBLISHED.

A Child's Book of Arithmetic. By HERBERT MCKAY, B.Sc. (Lond.), Honours in Mathematics. With many Illustrations by LILIAN FAIRWEATHER. Crown 8vo, 10d.

A novel and amusing little book on arithmetic. The subject is presented in a most attractive form, and the word "problem" is robbed of all its terrors.

A Textbook of Elementary Building Construction. By ARTHUR R. SAGE, Chief Lecturer in Building Construction and Mechanics of Building (L.C.C. School of Building), and WILLIAM E. FRETWELL, Chief Lecturer in Plumbers' Work, Sanitary Engineering, and Heating and Ventilating (L.C.C. School of Building). With 576 Illustrations. Crown 8vo, 3s. 6d.

This book is intended for students of Elementary Building Construction as a first year's course, leading up to the Lower Examination of the Board of Education. It should also be useful to students preparing for the various professional examinations, of which building construction and sanitary engineering form part.

A Third Year Course of Organic Chemistry. By T. P. HILDITCH, D.Sc. (Lond.), F.I.C., Author of "A Concise History of Chemistry." With many Diagrams. Crown 8vo, 6s.

This book combines a systematic survey of the important class of heterocyclic substances with a summary of various groups of bodies (notably the alkaloids, purines, polypeptides, carbohydrates, and terpenes) which have formed the subject of the more important research of modern times.

Junior Scripture Examination Papers: Old Testament. By Rev. S. A. P. KERMODE and Rev. W. WILLIAMSON. Fcap. 8vo, 1s.

This is a new volume in Methuen's popular series, Junior Examination Series, suitable for teachers and pupils in Lower and Middle Forms.

Practical Science for Engineering Students. By H. STANLEY, B.Sc., Lecturer in the Merchant Venturers' Technical College, Bristol. Crown 8vo, 3s.

This book contains a series of experiments in Heat, Mechanics, and in Magnetism and Electricity, together with some general experiments embodying important principles.

Old Testament History for Use in Schools. By the Rev. W. F. BURNSIDE, M.A., Head Master of St. Edmund's School, Canterbury. Sixth Edition. Crown 8vo, 3s. 6d.

Junior English. By F. J. RAHTZ, M.A., B.Sc., Senior Lecturer at Merchant Venturers' Technical College, Bristol. Crown 8vo, 1s. 6d. Tenth Edition.

Higher English. By F. J. RAHTZ, M.A., B.Sc. Crown 8vo, 3s. 6d. Eighth Edition.

English Composition. By F. J. RAHTZ, M.A., B.Sc. Crown 8vo, 1s. 6d.

English Composition from Models. By C. ROONEY, B.A., LL.B. Crown 8vo, 2s. 6d.

English Literature. By F. J. RAHTZ, M.A., B.Sc. Crown 8vo, 2s. 6d.

Selections from English Literature. Vol. I. (1350-1700). By F. J. RAHTZ, M.A., B.Sc. Crown 8vo, 2s.

Selections from English Literature. Vol. II. (1700-1900). By H. N. ASMAN, M.A., B.D., Second Master of Owen's School, Islington. Crown 8vo, 2s.

A Junior French Prose. By R. R. N. BARON, M.A., Modern Language Master at Cheltenham Grammar School. Crown 8vo, 2s. [Junior School Books.] Sixth Edition.

French Prose Composition. By R. R. N. BARON, M.A. Crown 8vo, 2s. 6d. Key, 3s. net. Fifth Edition.

An Introduction to the History of Rome. By H. N. ASMAN, M.A., B.D., Second Master of Owen's School, Islington. With 2 Maps and 14 Illustrations. Crown 8vo, 2s. 6d.

Easy Stories from English History. By E. M. WILMOT-BUXTON, F.R.Hist.S. Crown 8vo, 1s. Seventh Edition.

The Pageant of British History. By E. M. WILMOT-BUXTON. Crown 8vo, 1s. 6d.

The Romance of British History. By H. TURNER. Crown 8vo, 1s. 6d.

The Growth of Modern Britain. By B. H. SUTTON. Crown 8vo, 2s.

A Junior History of Great Britain. By E. M. WILMOT-BUXTON, F.R.Hist.S. Crown 8vo, 2s. Second Edition.

A History of Great Britain. From the Coming of the Angles to the Year 1870. By E. M. WILMOT-BUXTON, F.R.Hist.S. With 20 Maps. Crown 8vo, 3s. 6d. Fourth Edition.

A Short History of Early England. To 1485. By H. J. CAPE, M.A., B.A., B.Sc., F.R.Hist.S., Head Master of the Mathematical School, Rochester. Crown 8vo, 2s. 6d. [New Historical Series.]

A Short History of Modern England. 1714-1910. By ERNEST BOWYER, B.A., B.Sc. Crown 8vo, 2s. 6d. [New Historical Series.]

Makers of Europe. Outlines of European History for the Middle Forms of Schools. By E. M. WILMOT-BUXTON, F.R.Hist.S. With 12 Maps. Crown 8vo, 3s. 6d. Thirteenth Edition.

Double-Entry Book-keeping. A Complete Treatise on its Theory and Practice. By JAMES CUSACK, LL.D., Principal of the Business Training College, Finsbury Square. Crown 8vo, 3s. 6d.

Practical Geometry for Schools. By SIDNEY A. SWITZER, Art Master and Honours Medallist in Geometry, Examiner to the Examination Board of the N.U.T. Fully Illustrated. Crown 8vo, 2s.

A Concise History of Chemistry. By T. P. HILDITCH, D.Sc. (London), A.I.C., F.C.S. Crown 8vo, 2s. 6d. [Textbooks of Science.]

A First Year Physical Chemistry. By T. P. HILDITCH, D.Sc. (Lond.), F.I.C. Crown 8vo, 2s. [Textbooks of Science.]

Elementary Experimental Chemistry. By A. E. DUNSTAN, D.Sc. (Lond.), Head of the Chemical Department, East Ham Technical College. With 109 Diagrams. Crown 8vo, 2s. [Junior School Books.] Fourth Edition.

A Junior Chemistry. By E. A. TYLER, B.A., F.C.S., Head of the Chemical Department, Swansea Technical College. With 78 Illustrations. Crown 8vo, 2s. 6d. [Junior School Books.] Seventh Edition.

A Textbook of Inorganic Chemistry. By G. SENTER, D.Sc., Ph.D., Lecturer at St. Mary's Hospital Medical School, Author of "Outlines of Physical Chemistry." With many Diagrams. Crown 8vo, 6s. 6d. [Textbooks of Science.] Second Edition.

The Complete School Chemistry. By F. M. OLDHAM, B.A., Senior Chemistry Master at Dulwich College. With 125 Illustrations. Crown 8vo, 4s. 6d. [Textbooks of Science.] Seventh Edition.

A Textbook of Practical Chemistry for Technical Institutes. By A. E. DUNSTAN, D.Sc.; and F. B. THOLE, B.Sc., Lecturer in Organic Chemistry, East Ham Technical College. Crown 8vo, 3s. 6d. [Textbooks of Science.]

A First Year Course of Organic Chemistry. By A. E. DUNSTAN, D.Sc. With 2 Plates and many Diagrams. Crown 8vo, 2s. 6d. [Textbooks of Science.]

A Second Year Course of Organic Chemistry. By F. B. THOLE, B.Sc., Lecturer in Organic Chemistry, East Ham Technical College. With Plates and Diagrams. Crown 8vo, 2s. 6d. [Textbooks of Science.]

Modern Research in Organic Chemistry. By F. G. POPE, B.Sc. (Lond.), F.C.S. With 261 Diagrams. Crown 8vo, 7s. 6d. [Textbooks of Science.]

Outlines of Physical Chemistry. By GEORGE SENTER, D.Sc., Ph.D., Lecturer in Chemistry at St. Mary's Hospital Medical School. With many Diagrams. 5s. [Textbooks of Science.] Fourth Edition, Revised and Enlarged.

Elementary Experimental Science. Physics by W. T. CLOUGH, A.R.C.S., Head of the Physics and Electrical Engineering Department, East Ham Technical College; **Chemistry** by A. E. DUNSTAN, D.Sc. With 2 Plates and 154 Diagrams. Crown 8vo, 2s. 6d. [Junior School Books.] Thirteenth Edition.

METHUEN & CO., Ltd., 36 Essex Street, London, W.C.

Supplement to
THE JOURNAL OF EDUCATION.

No. 537.

APRIL 1, 1914.

Cambridge University Press

The Bible of To-day. By the Rev. ALBAN BLAKISTON, M.A. Crown 8vo. **3s** net

A popular introduction to the historical or critical method of studying the Scriptures and investigating their messages. It gives a brief survey of the whole field of Biblical study, thus enabling the reader to gain a general view preliminary to more detailed study of the subject.

Know Your Own Mind. A Little Book of Practical Psychology. By W. GLOVER. Fcap. 8vo. **2s** net

The author's aim is to interest ordinary men in Psychology, a subject he considers vital to their welfare, and to show them that, in the words of William James, "the elements of the mental machine can be clearly apprehended, and their workings easily grasped." Attention is given mainly to first principles and their practical application. The book is written in a popular style, and the author makes use of ordinary, everyday incidents to illustrate his points.

Lectures on Dryden. Delivered by the late A. W. VERRALL, Litt.D. Edited by MARGARET DE G. VERRALL. Demy 8vo. **7s 6d** net

Greek Sculpture and Modern Art. Two lectures delivered to the students of the Royal Academy of London. With an Appendix. By Sir CHARLES WALDSTEIN, Litt.D., Ph.D., L.H.D. Demy 8vo. With 78 plates. **7s 6d** net

History of Roman Private Law. Part II, Jurisprudence. By E. C. CLARK, LL.D. Crown 8vo. In two volumes. **21s** net

Photo-Electricity. By A. LL. HUGHES, D.Sc. Demy 8vo. With 40 text-figures. **6s** net Cambridge Physical Series.

First Steps in the Calculus. (Being Chapters XXIII to XXVI of *Elementary Algebra*). By C. GODFREY, M.V.O., M.A., and A. W. SIDDONS, M.A. Crown 8vo. **1s 6d**

Six Contes par Guy de Maupassant. Edited by H. N. P. SLOMAN, M.A. Crown 8vo. **2s 6d**

The first volume of the Cambridge Modern French Series, which aims at providing Modern French texts equipped with exercises on the lines of the direct method. A vocabulary is added for those who desire it. The present volume is in the Senior Group, intended for pupils of from 17 to 19 years of age.

Stinde. Die Familie Buchholz. Edited by G. H. CLARKE, M.A. Crown 8vo. **2s 6d**

In the Cambridge Modern German Series, which is primarily intended for use on the direct method by students who have completed their first course in German. The volume contains a short sketch of the author, questions and exercises, subjects for free composition, and a vocabulary for those who desire it.

The Poem of Job. Translated in the metre of the Original. By E. G. KING, D.D. Pott 4to. Paper boards, parchment back. **5s** net

The Second Book of Kings. Edited, with introduction and notes, by G. H. BOX, M.A. Fcap. 8vo. With a map. **1s 6d** net Revised Version for Schools Series.

Terence. Phormio. Edited, with introduction and notes, by JOHN SARGEANT, M.A. Extra fcap. 8vo. With or without vocabulary. **3s** Pitt Press Series.

Spenser. The Faerie Queene, Book II. Edited, with introduction and notes, by L. WINSTANLEY, M.A. Extra fcap. 8vo. **2s 6d** Pitt Press Series.

Kingsley. The Heroes. With a pronouncing dictionary of proper names and eighteen illustrations. Extra fcap. 8vo. **1s** Also published with introduction and notes by Prof. ERNEST GARDNER, M.A. **1s 6d**

TEXT-BOOKS ON ENGLISH AND HISTORY

ENGLISH

The Revised English Grammar. A new edition of *The Elements of English Grammar*, based upon the recommendations of the Committee on Grammatical Terminology. By A. S. WEST, M.A. **2s 6d**

THE CULTIVATION AND USE OF THE IMAGINATION.*

By Canon J. H. B. MASTERMAN.

THERE is no charge that has more often been brought against us as a nation than the charge of want of imagination. I will not stop now to consider how much truth there is in the accusation; but the fact that it is made illustrates the general recognition that a nation deficient in imagination is lacking in one of the elements of true greatness. Now if this is true, then the question of how to develop imagination as part of our system of education becomes of vital importance. But first of all, what is imagination? It is the exercise of the creative faculty of the mind. All our knowledge of the world comes through the two faculties of perception and imagination—what the mind sees and what it creates. But what is the relation between these faculties? The question brings us to Coleridge's distinction between imagination and fancy. If the creative faculty of the mind becomes separated from the faculty of perception, then we live in two unrelated worlds—the world of things that we perceive and the world of fantasy that we create. This kind of imagination—the faculty that gives to airy nothings a local habitation and a name—Coleridge calls fancy, keeping the name imagination for the nobler faculty that exercises itself on real things. Read the preface to the "Lyrical Ballads" if you want to see what all this means. To the unimaginative man the romantic means the unreal; to the imaginative man the unromantic means simply the unrealized. Remember Wordsworth's Peter Bell:—

A primrose by the river's brim
A yellow primrose was to him,
And it was nothing more.

Well, that is a view with which Peter Bell's donkey would thoroughly sympathize. You can't even eat primroses. But what is a primrose to the man who has learnt to use his imagination? It is a sacramental expression of all the life of the universe. All the mystery of the spring, all the hope of the summer, all the memories of unforgotten days, all the patter of the rain on the dead leaves in the woods, and the love song of a thousand birds, all the hopes that the winter cannot slay, all the sense of the new beginning of things—it means all that, and more. And what makes it mean all that? Only the power of imagination.

So now we can see what imagination means—it is the faculty that realizes the infinite significance of ordinary things; that sees the particular as a revelation of the general, the finite as a segment of the infinite. Like all the faculties of our nature, imagination requires educating. As Goethe says, "Nothing is more frightful than imagination without taste." And the education of imagination means, first the development of the faculty, and secondly, the right disciplining of the faculty when it has been called into exercise.

But here I must meet the charge that imagination is an intellectual luxury, a pleasant exercise for the leisure moments of life. This is a very common idea, but it is profoundly untrue. I am confident that half the social wrongs of modern life arise simply from inadequately developed imagination. The child who treats animals unkindly; the nobleman who allows the peasantry on his estates to huddle in tumbledown cottages; the lady who is glad that hooks and eyes are so cheap, or wears egrets because they are fashionable; the clergyman (for I will not spare myself) who preaches the duty of contentment to the poor, are really suffering from lack of imagination. They have never seen what these things mean; never turned the searchlight on them. So I believe that imagination, rightly directed, would be the mightiest agent of social reform ever called into activity. For economics can only tell us what the world is; imagination tells us what it might be.

I say this to explain that in urging the cultivation of the imagination I am not urging that children's minds should be

* An address to teachers, given at West Ham and at Croydon.

directed from effective doing to impracticable dreaming. Dreams are the reward for noble effort that God gives to the old, but visions are the stimulus to noble effort that God gives to the young.

Children vary very much in imaginative power, but imagination is certainly a normal faculty of childhood. It shows itself in various ways; among others, in a habit of romancing that it seems harsh to call lying. I should draw a rather strong distinction between an untruth told to gain some advantage or avert some unpleasantness and an untruth told from a kind of perverted imagination; for things of the mind are often very nearly objective realities to children. We must check the habit, but we can do it best by showing our children that real things are just as full of romance as mere fancies.

I suppose that the human mind starts with its imaginative power more strongly developed than its perceptive power. So the earliest thing that we have to learn is the reality of things. The dream-world is just as real to the little child as the world of so-called realities. But gradually the external world asserts itself, and as it does so one of two things happens—either the faculty of imagination is stifled and dulled, or, under the wise guidance of skilful teaching, it turns to the world of external things and finds its true place there. In Browning's phrase, we mix our live souls with the inert stuff, and under the shaping spirit of imagination we see the world as it truly is because we see it imaginatively.

It is sometimes supposed that imagination, like long hair and velvet coats, belongs to the artistic temperament. As a matter of fact, the special danger of the artistic temperament is not an excess of imagination, but imagination divorced from reality, and wasting itself with shams and illusions.

Consider three departments of human life—politics, science, and history, and notice the part that imagination plays in each. Take, first, political life. Can you not see that the whole difference between a statesman and a mere administrator lies exactly in this faculty of imagination. Remember what I said just now, that imagination is the faculty that can see the particular as a revelation of the general. Is that not exactly what a statesman has to do? He is immersed in a mass of detail—the moment's expedient to meet the moment's need—and unless he can see all these details against the background of the larger whole, the far-off divine event to which they are moving—unless he can do this, he can neither lead nor inspire. How do you think that any man can lead the life of a great city unless he has, by the power of imagination, seen some ideal of whither he means to lead? Take imagination out of foreign policy, and it is nothing but a mean scramble, like the obscene battles of vultures among the corpses of a battle-field. Take imagination out of national education, and what is left but the tedium of infinite detail and unromantic drudgery?

And this is equally true of the ordinary elector. Where there is no vision, the people perish. People often say that they cannot understand why women should want the vote; for their part they would just as soon not have it. Yes, to Peter Bell a primrose is a primrose; to John Smith, of Acacia Villas, a vote is a vote. Poor Peter Bell! poor John Smith!

Then, again, think of modern science. Wherein lies the greatness of a Newton, a Darwin, a Kelvin? In capacity for patient research? Yes, that certainly, but something more. The great discoveries of science are triumphs of research, but first of all they are triumphs of imagination. It is imagination that sees the particular incident or organ as the symbol of a general law; that makes the daring guess that none has dared to make before; that propounds the hypothesis that changes human thought. I tell you, the poetry of the nineteenth century is written in its books of science not less than in its books of verse.

Or, again, shall I take you to the historian? Rob him of his imagination, and you have shorn away the locks that were the secret of his strength. He cannot make the past live again; he cannot see the present as the beginning of the future. He may be a laborious chronicler, an unscrupulous partisan, a glorified journalist, but he cannot be a historian.

So at last we reach the teacher. What does he want with

imagination? I say that no one needs it more—I had almost said that no one needs it so much. For the work of a teacher is a mass of detail that grows dull through constant repetition. It is not as though he could carry his scholars on year by year into deeper knowledge. He is always beginning again, climbing the same paltry hillocks, padding the same dusty roads. There are only two alternatives before the elementary-school teacher—he must become an idealist or a drudge. And an idealist means a man whose outlook is coloured by imagination.

The question is sometimes asked why in this country the office of a teacher does not receive more respect in general public estimation. May I dare to give you the answer? The public do not estimate your work highly enough, because you do not rank it high enough yourselves. And that simply means that we teachers are deficient in imagination. And to lack imagination is to lack the joy of service, for it means that we do not see our own little bit of work as part of a great whole—may I dare to say, as part of the Divine activity of service?

Perhaps I have said enough about the value of imagination in the personal life of the teacher. Turn now to the work of teaching. What is it that makes a man a great teacher? Knowledge, of course; but a man may be a walking encyclopædia and yet be utterly unable to teach. It is imagination that transforms dead facts into living things. Sometimes it has fallen to my unhappy lot to happen upon a class engaged in the ghastly task of memorizing English verse; and I have ceased to wonder that the British people, which has produced some of the greatest poetry in the world, is, for the most part, frankly indifferent to its own treasures. Yet think of what such a poem as Wordsworth's "Sonnet on Westminster Bridge" might be if it came to our children through the medium of imagination.

Dear God, the very houses seem asleep,
And all that mighty heart is lying still.

Then think of Nature study, of a pinch of earth seen through a microscope, of the infinite variety that has not made two blades of grass alike. Think of our London sparrows. "Not one of them falleth to the ground without our Father's knowledge." Think of what you can teach from a feather, a lump of coal, a handful of seed. I would say to all teachers, leave your textbooks at home and bring your imagination to school.

And then think of history. I want to start a society for the abolition of Readers, though I believe that they are dying a natural death without that. Why do our children crowd our kine-matograph halls? Because they love moving pictures; that is, because they love living things. Well, give them moving pictures. Help them to make them for themselves. Take them a little into the byways of history. Let them be monks for half an hour in a medieval monastery, or warriors in a medieval crusade. Let them sail with Drake to the west or ride with Pym to Parliament. Let them see history as a pageant that has a meaning behind it.

All this will help to develop the imagination, but the harder task remains of training it. Remember again Goethe's words, "Nothing is more frightful than imagination without taste." For imagination may light up things holy and pure and of good report, or it may light up things unholy and impure and of evil report. Among the saddest things in the world are the examples of moral shipwreck of men whose course has been lighted by high imagination. Remember Ruskin's words, "Take the love of beauty and power of imagination, which are the source of every true achievement in art; let the devil touch them with sensuality, and they are stronger than the sword or the flame to blast the cities where they were born into ruin without hope."

The current ideals of our national life are materialistic; and because they are materialistic they are inadequate. They do not go deep enough into the central facts of human life. They leave the great question unanswered, "What shall it profit a man if he gain the whole world and lose his own soul?" If you want to see statesmanship set on fire by imagination you must study the Hebrew prophets—above all the prophets of

the exile. With what splendid faith they looked beyond the disillusionment, and saw how "the ransomed of the Lord shall return and come to Zion, with songs and everlasting joy upon their heads." So imagination kindled hope, and hope brought fulfilment, and the life of the nation was saved.

There is a certain class of mind that delights to sneer at Utopias, but without them the best work of the world would remain undone. For in that greatest of all arts—the art of living—we must follow the true rule of all art; we must

Image the whole, then execute the parts,
Fancy the fabric
Quite, ere you build, ere steel strike fire from quartz,
Ere mortar dab brick.

How can we teach the imagination of our children to create ideals? My answer is that there is only one way, and that is by having them ourselves. If our own outlook on the future is untouched with idealism, if our own attitude towards great political questions is moulded only by the influence of self-interest and tradition, how, in such an atmosphere, can we hope to train our children in that exercise of imagination which is, or should be, "the masterlight of all our seeing"?—

Better it were, thou sayest, to consent,
Feast while we may, and live ere life be spent,
Close up clear eyes, and call the unstable sure,
The unlovely lovely, and the filthy pure;
In self-belyings, self-deceivings roll;
And lose in Action, Passion, Talk, the soul.

Nay, better far to mark off thus much air,
And call it heaven; place bliss and glory there;
Fix perfect homes in the unsubstantial sky,
And say, what is not will be by and by;
What here exists not must exist elsewhere.
But play no tricks upon thy soul, O man!
Let fact be fact, and life the thing it can.

There is a needful warning in that last line. We must reckon with facts. If once the ideal and the actual get out of relation with each other, all the bells of life are jangled and out of tune. Shakespeare has given us a supreme example of this in "Hamlet." It is this that makes cynicism so poisonous and pestilential a thing. Out of an atmosphere poisoned with cynicism idealism will fade altogether or remain only as a disturbing influence destroying the practical effectiveness of life. Hamlet is a man of high imagination, whose ideals have been shattered in that very home life where they ought to find a safe refuge. Let us learn the lesson: every harsh judgment lightly given, every smart cynicism carelessly spoken, in the hearing of our children, helps to destroy the foundation on which imagination can build. For fancy may build her castles in the air, and forget next day that she ever built them at all, but imagination "looks for a city that hath foundations, whose builder and maker is God."

I mentioned Hamlet just now as an illustration of a man whose life was wrecked because his imagination was wrenched out of relation with reality. I might quote Browning's "Sordello" as another study of a similar danger. And I only mention "Sordello," which is much too complex a study to analyse now, in order to remind you of Browning's solution of the problem. He undertakes to speak for Sordello, and what he sets forth as the poet's "utter need" is the right understanding of the Incarnation. Why? Because the story of the Incarnation is the supreme example of imagination in touch with reality. The reality is a human life lived under human limitations and among human associations. But that life evoked in those who knew it a power of imagination under the interpreting influence of which it expanded, and opened out, and grew infinite in its significance, and touched the Divine and became one with the Divine. For, at its highest, imagination means the power of seeing things as God sees them, interpreting the temporal from the standpoint of the Infinite. And, therefore, imagination becomes inspiration, and is like the ladder of Jacob's dream, set up on the earth and the top of it reached to heaven.

Schemes of education will be of value exactly in proportion to the degree in which they evoke and train the three great

faculties of our nature—the faculty of Memory, by which we enter into the inheritance of the past; the faculty of Observation, by which we enter into the inheritance of the present; and the faculty of Imagination, by which we enter into the inheritance of the future.

If you can thus train and discipline the imagination of your children, you will be furnishing them with a valuable equipment for the work of life. For imagination is the secret of true craftsmanship. Imagination is the enemy of bad work, because it sees the particular as part of the general, the brick as part of the building, the rivet as part of the Dreadnought. It sees the infinite significance of little things—the one loose nut that wrecks the motor-car, the one white lie that wrecks the life.

And imagination is the secret of true citizenship: and how much of your work is in the training of citizens. The ugliness and meanness of much in modern England would be intolerable to a generation trained in the faculty of imagination. Imagination is the parent of discontent, not the aimless discontent that is only eager to destroy, but the wise and patient discontent that is always building up. And imagination is a necessary element in all true religion. For imagination means the realization of the unseen. And it is very hard to realize the unseen under the conditions of modern life. The products of human activity fill the foreground of modern life, and the spiritual background is hidden. Yet Romance is not dead. Touch the things around you with the magic wand of imagination and they become transparent. We look not only at them, but through them.

I have said much about the use of the imagination. But if we are to develop and train the imagination of our children, we must first develop and train our own. So we come to the cultivation of the imagination.

The first thing to say is that we must feed ourselves if we are to feed others. The teacher who makes himself a mere conduit-pipe through which information flows to his class is guilty of a kind of imaginative suicide. I think it is the first principle of teaching that we must read something that we shall not have to teach. The best kind of fiction is a valuable training of the imagination. No historical teacher can afford to neglect the best historical novels. It does not much matter whether the facts are right so long as the atmosphere is right.

All good fiction helps to train the imagination. But, remember, it must be good fiction. You cannot train your power of musical perception by setting an enormous gramophone to roar comic songs into your ears; you cannot develop your sense of color by papering your wall with red and yellow stripes. The objection to much modern fiction is that it does not train the imagination, but crushes it. It glares, and roars, and shrieks. You cannot train your imagination on the works of Marie Corelli or Hall Caine. Such writers do not give your imagination a chance. Among modern novelists, I should say that Meredith provides the best training for the imagination; and next to Meredith, George Eliot. And among quite modern writers Arnold Bennett occurs to me as a novelist who tries to help, rather than to overwhelm, the imagination of his readers.

Then I would say, have a hobby of some kind that will help to keep your imagination at work. Buy a second-hand telescope, and study the stars. I suppose no one who has seen Saturn for the first time through a moderately high-power telescope will ever forget the experience. It suddenly makes the universe real. Or buy a microscope, and study the dust. Remember Tennyson's lines about

The million millionth of a grain
That, ever vanishing, never vanishes.

Or, if you are a head teacher, and therefore rich beyond the dreams of avarice, buy a vacuum tube, and rig up an electric apparatus, and experiment with rays. In a word, let your hobby be something that takes you into a new world of wonder. You will be a better teacher next day.

Then about poetry. A book like Prof. Raleigh's "Wordsworth," or Mr. Chesterton's "Browning," or Stopford Brooke's

"Tennyson," or Mr. Glover's "Virgil," or Dean Church's "Spenser," will help you to approach the great poetry of the world in the right way. And there are few things in which we need help more than in the study of poetry. A love for poetry has no commercial value, but it is very good for the soul.

There are many grounds on which the reading of the Bible ought to be encouraged, and on the deeper grounds I will not enter here. But, apart from all else, the Bible contains some of the finest poetry in the world. How much of Ruskin's power of imagination was due to the fact that he used to read the Bible through from Genesis to Revelation with his mother. I wonder whether you all know the "Modern Reader's Bible," published a few years ago under the editorship of Dr. Moulton. Each book or group of books is published in a separate volume, and printed in a form that brings out the structure with new significance. To read the Minor Prophets, for example, in Dr. Moulton's volume will give you quite a new idea of their literary character.

That much abused word, "culture," really expresses what I mean by the development of the imagination. A teacher who is not a cultured man or woman has no right to be a teacher at all, any more than a man whose garden is a wilderness of weeds has any right to set up as a horticultural expert. But culture does not mean the ability to talk learnedly about artistic values and tones and the technique of art and literature; it means the ability to see, by the power of imagination, the infinite significance of ordinary things. The cultured man is the man to whom nothing is common or unclean. He is not always a contented man, for he has a high ideal of what his work ought to be; but he is always a happy man, because he has the philosopher's stone that can turn the dust of common life into the gold of inner realization.

What we all need is to learn how to face our special task in life with courage and hope. Imagination simply means the power of seeing our work as God sees it; not as a mere unrelated fragment of effort, but as part of a great whole—one note in a great orchestra, one stone in a great building, one grain in a great sowing, whereof the harvest is not yet.

MONS VIRTUS: AN ALLEGORY.

T IRED and weary with the day's work I sat by my lonely fireside and watched the play of light and shadow on the darkening walls of my room. And as I sat and gazed, the dreary darkness seemed gradually to give place to a strange and wonderful scene, the contemplation of which soon occupied my whole attention. Instead of my own little school affairs filling my mind, I was watching with ever-growing interest a very different picture. I seemed to be looking down from a vast height upon an entirely strange country. Stretched out before me was an immense and hilly district whose lower valleys were but dimly to be seen through the haze which enshrouded them; here and there a higher point stood out against the sky-line, and I saw that most of the summits rose in needle-like peaks separated from each other by valleys whose depths I could only guess. All these peaks, however, were dwarfed by one great mountain mass that towered like some huge giant in the very midst of them. Upon its mighty head rested a glorious light, so that notwithstanding the distance I could see all that was happening there. A countless number of men were gathered together, and not till I realized the greatness of the crowd was I able to form an accurate idea of the vastness of the view before me. But the strangest thing of all was the magic effect of that glorious light upon my powers of vision. When I looked again to the lower slopes and the craggy peaks, I could see distinctly the details of each; stranger still, I had the power to see through the mists which hung over the valleys. Never had Alpine climber so clear a panorama before him; and as a feeling of exaltation rose in

my mind, I heard a voice saying, "Think not that the power is thine; it is but lent so that thou mayest tell thy brethren what thou art about to see. Look well and long, that the vision may rest in thy mind. Thou art but a servant privileged to see from above some glimpses into the Real." Whereupon all thought of pride left me, and I determined to use to the full the opportunities granted me. Some will say I dreamed, but some will have understanding to perceive the truth.

First I looked upon that which lay nearest to me. Toiling up the rocky ridges were many groups of boys who seemed to be guided by men who tried to lead them to the top of the little peak ahead. But now I saw that what had looked like a little peak was in reality no inconsiderable mountain, and the climbers seemed to find their task beyond their strength. Ever and anon one would fall behind, while some even turned round and began to descend the slope; in such cases the leader would call to them, take them by the hand, and encourage them to persevere; some of the leaders carried whips, with which they urged on the laggards; yet often the more they whipped, the less progress the climbers made. Sometimes I saw the whip produce a good result; I watched one young climber who sat down and declared he could go no farther; the whip just touched him, and soon he was the foremost in the band. And as I still looked I noticed that the way was often rough and stony, and the boys' feet were wearied and bruised by the toil of the climb. One such was in the band of him who had used the whip, but the leader approached him kindly and raised him to his feet; he even carried him over the roughest of the path, encouraged him with cheering words, pointing as he spoke to the peak in front, and then across to the great summit where glowed the wondrous light. When he first spoke the boy's face darkened, and he shook his head, but when the two looked to the distant mountain I saw the light gleam upon their faces, and then with a smile the boy addressed himself again to the climb. After that he was ever the nearest to the guide, and when the road again grew stony he stepped bravely on; though his steps still faltered, the glow from the distance was on his face; once I saw him take the hand of a comrade and help him onwards.

Ever there came fresh bands from the valleys to climb the peaks, and every peak was an object of attainment to some travellers. While I gazed wondering what the meaning of it all was, the voice again spoke, "From the upper heights thou seest the boys of the earth striving to reach the glory that rests on the summit of Mount Virtus, for thither does the ambition of boyhood tend. And forasmuch as the way is long and toilsome, guides are appointed who may help them on the journey. There are many paths over the lower ranges, and the tracks may easily be missed. But thou shalt see for thyself how the travellers prosper." With that he seemed to touch me, and straightway I became invisible to the eyes of men, and was conscious of one who stood by me in shining garb. The stranger led me far down towards the rugged and broken land of Youth, which lay among the valleys and hills that I had seen in the distance.

Soon we overtook a band of boys who were being led through the dry and stony plains that lay at the foot of the lofty peak of Mons Literatus, across whose slopes went one of the most frequented of the routes to Virtus. I learned that the leader of this band had in his early days achieved great reputation by the skill with which he had climbed the rugged path that went straight up this very peak, and hence he had been chosen as a fitting guide for the boys. But he had for so long a time been gazing on the rocks and crags of the peak that he had ceased to look across to the glorious light streaming in the distance. Thus his vision had grown dim, for unless the eyes were frequently directed to the distant light they lost the power of distant vision; a man thus afflicted could only see what lay immediately in front of him, and often confused the near with the distant. This poor guide actually believed that his little peak was the distant Virtus, and I heard him telling the boys how the gods had chosen it for their own dwelling-place. The road this band was following was very rough, and often some boy stumbled or fell. The guide tried

to cheer them on, but his voice had lost its power, so that few could hear what he said. Some of his boys lagged behind on the road, saying that the peak was inaccessible, and they were better off as they were; others struggled on, and I noticed that, when they came to the place where the road for Mount Virtus branched off, they all missed it and went after their leader to the top of the peak. Some of them looked happy to have achieved their goal, but others were sad, and asked where the light was which they were promised at the journey's end. A few became distraught, and though they sat on the very summit of Literatus they looked like those whom melancholy had claimed for her own. My companion told me that there was some excuse to be made for the guide's mistake. In earlier times nearly every traveller was forced to take this road if he wished to reach the distant glories of Virtus. Even now it was perhaps the safest of all the routes, though there was a strange fascination about the peak which affected many as it had the guide we had just met. The danger lay in the leader's weakness, not in the perils of the road itself.

Soon I had a proof of this truth, for at that moment another band came up the same path. I noticed, however, that, as often as this band gained a projecting crag whence the glory of Virtus was visible, its leader paused and pointed out to his boys the real end of their march, so that they resumed the way with clearer visions of the goal. When they reached the parting of the roads, most of the band branched off along the road to Virtus, but one or two who had been the most skilful began to scale the very steepest path to the summit of Mons Literatus. To my astonishment their leader made no demur, but parted from them with many a kindly farewell. My companion told me that for a few gifted youths there lay from the summit of every peak a difficult path to Virtus, but only those whose eyes had been often turned to the magic light had vision to discern it; even then they required the winged heels of Genius to tread it. Only the best and the bravest of the sons of men could traverse that airy path, but to them it was given that waft encouragement to such of their fellows as followed the humbler paths below. Plato had trodden it, blind Milton had crossed it, but most of those who attempted it had been beguiled to their destruction by the glittering pebbles which lay scattered on the way, little things of beauty that I had seen the lost leader pointing out for the admiration of his band, telling them that the light which gleamed on the polished stones was the light that shone on Virtus. Poor man, he had eyes to see the glitter of the trivial; he was blind to the glory of the distant and eternal.

Between some of the peaks, and up some of the loftier hills, stretched wide smooth grassy plains, and I saw that when a band of boys reached them they at once changed their travelling garb for white raiment. Faces which had been sad and gloomy on the rocky paths then shone with unusual animation. Cries of delight echoed on all sides. At times I caught glimpses of what appeared to be a kind of mimic warfare, but no one could think the opponents to be real foes. No guides were needed across these pleasant plains, though some well-meaning but foolish men tried even here to lead. But they only succeeded in taking a longer and duller path, and I saw that their boys moved on more quietly, and that the look of spontaneous happiness died from their faces. I heard that all these grassy plains had been laid out by the loving care of the Lord of the whole realm, and that across them lay some of the most direct roads to Virtus. Their only danger lay in the travellers being so delighted by the pleasure of their surroundings that they delayed therein too long.

I watched some bands thus delaying, and ever the clear light shone fainter and fainter upon them till at last I saw them trying to find the road they had lost, and falling out of my sight in the thick haze of the lower valleys. My companion assured me that every road to Virtus, even the grassy plains, sloped upwards. When I asked how these plains were called, I learned that they had many names; of some of the most delightful no man could pronounce the name, though the lips of boyhood could easily utter them. And I noticed that among the grass of these plains there grew flowers of purest white, which the boys loved to gather, carrying them with them as

they turned once more to the steeper paths. And when the road was very hard they would look upon the little flower and gain courage as they thought of the other grassy plains that lay beyond the rocky path.

I next visited another mountain connected by a great causeway with that on which we had just been. Some called it a separate height, others maintained that the two rose from a common base. Up its smooth shoulders countless paths were trodden by the many travellers who chose this way for their journey. It was the huge and famous peak of Science—so huge that no man had yet learned all its hidden ways. The boys chose it because of the glamour that ever surrounds the unknown. Its higher crags rose as if deriding the puny attempts made by the travellers to scale them. On this mountain the guides suffered from a strange delusion. Some of them argued that since the summit of Virtus had never been trodden by mortal feet, and since no man had ever reached the top of Mount Science, therefore Mount Science was the true Mount Virtus. Moreover they pointed to the halo of light that always rested on the mountain as another argument in their favour, but they were told that the halo was but the reflection of a distant light, and that the peak only shone with borrowed glory.

We left them to their disputations, and drew near to a band of boys moving rapidly forward under the guidance of one who seemed familiar with his road. And I noticed that, whereas in many bands the faces of the boys were often dull and sad, here every face was bright with the happy light of boyhood. Certainly the pleasant fields of Experiment at the base of this hill were much more attractive than the stony plains that we had seen at the foot of Mons Literatus. More brightly shone the distant light on them, and often the boys' glances wandered from the soft turf at their feet to the brightness of the sky above. Yet here, too, it was possible for the travellers to lose the road. Those whose gaze became fixed on the attractions of the peak itself, and who did not perceive that all this glory was but borrowed, sooner or later went astray. It was on this mountain in particular that my attention was attracted by men who passed rapidly from band to band, asking questions of the boys and leaders, and sometimes directing them as to the best road. These were the patrols, men organized by the authorities to ensure the safe guidance of the bands. Unfortunately, although some of these patrols gave valuable help, many of them had been chosen rather for their knowledge of a particular peak and the skill they had themselves shown in climbing it than for any very distinct acquaintance with the entire road to Virtus; hence their local knowledge often delayed the real progress of the travellers. Moreover, they knew little of the difficulties that the boys encountered, and were too often impatient with the leaders who had studied more fully and sympathetically the ways of boyhood. I saw one patrol join a band led by an old leader, and complain because the boys were not nearer to the summit. The old man mildly asked him if he had ever led a band thither. The patrol answered sharply that he had climbed the path himself, and knew it well, but that he now only condescended to help the leaders. Patrols were few, and to be respected; leaders were many, and too often ignorant. But the old man endured this insult patiently, though I saw that he looked across to Virtus, and a bright ray of the distant light shone on his gray hairs and enwrapped his face in a golden halo. He turned again to his boys, and I heard him murmur to himself something about the wisdom of men being foolishness elsewhere, but I could scarce hear the words, so softly were they spoken. And then I saw that he still led his band along the same road, ever pointing out the glorious light of Virtus, so that, as they looked, the boys seemed to catch upon their faces something of the glory that shone on his, and I thought to myself that surely no leader was more successful in his work than he.

But even as I thought, there approached another patrol who handed to the old man a letter ordering him to leave his band, which the authorities had declared him to be no longer capable of guiding aright. For a moment the old guide looked sad, he bowed his head, and when I again saw his face it was

as that of an angel. He bade a loving farewell to his boys, uttered softly the one word "Finis," looked once again with unspeakable affection upon the boys, then turned swiftly and disappeared. When I again beheld him, he was far away upon the slopes of Virtus itself. And as he drew nearer and nearer, methought there came those who met him with rejoicing, and they all passed into the dazzling glory till I lost them from my sight. And then I knew that there was a road unseen to me but evidently known to the old man, by which he had attained his final goal; nor could I help regretting that he had not been allowed longer to teach that pathway to his boys. I saw them also once more; moving more swiftly up the steep path to the top of Mount Science, they no longer had time to look across to the glory of Virtus, and then I understood for the first time what the old man had meant when he had spoken of wisdom being foolishness. But even as I thought thus to myself, I saw one or two of the band had so got into the habit of looking towards Virtus that now they did so on their own account, and I knew that the old man's labours had not been in vain.

My companion took me to many other peaks. We saw everywhere the bands of boys, and I learnt much more than I can weary you with relating. We visited Mons Mathematicus, which few bands could altogether avoid, but its slopes were very steep and its paths stony, so that the boys moved sadly and slowly, and the leaders' whips were often in use. My guide told me that the higher paths on this mountain were more attractive, but that few boys ever climbed high enough to be conscious of the austere beauty that characterized the summit. Then we went to the twin peaks which lay near Mons Literatus, and which many now chose instead of following the older track. I learnt that they were called Mons Gallicus and Mons Germanicus. On these peaks the patrols were specially busy, and they seemed to be received by the leaders with a more real welcome than on other peaks. I could not but note on these peaks a strange feature that characterized many bands. Instead of the band moving along the path in silence as elsewhere, a sound of voices was often heard, and I learned that many leaders encouraged their boys to beguile the tedium of the way by repeating or singing a poem recently composed. When I drew near enough to catch the words, I could hear that it was the "Lay of the Direct Method." It certainly enlivened the march, but one old leader said that the breath thus wasted should have been saved for the labour of the ascent. I cannot tell, for there seemed to be much difference of opinion on the matter.

But I must not omit mention of one strange thing. Some guides had accepted a recently propounded theory about the cruelty of using the whip. They called it a barbarous relic of the past which ought to be discarded. So they cast it away—the leader no longer drove, he led. The new plan worked excellently, except for one little matter that had been overlooked. The old guides had had their bands before them; they had given orders, and had seen them obeyed. The new guides walked at the head of their bands; they tried to allure the boys to follow them, but I saw that many boys slipped out of sight and went their own way, so that it was but a small remnant that gathered round the leader at the end of the day's march.

But I was now drawing near to the end of the journey. Mount Virtus rose in front, and greater and greater grew the host of boyish travellers. I discovered to my astonishment that many of them had long ago parted from their guides, and had travelled alone along the road. Nor were they the most backward of the host. They had seen the light of Virtus, and, in spite of every obstacle, had journeyed thitherwards. And now I saw that he who once set foot even on the lowest slope of this great mountain seemed to add to his boyhood something of the power of manhood. Something of the glory of the "vir" was his, transfiguring him and ennobling him. The weakest dared to try to scale the heights, and from the summit there ever glowed as a beacon the glorious light. No one tried to outclimb his fellows; the highest task seemed helping some other upward. And I saw that he who helped another to rise raised himself more thereby.

Now it happened that when I essayed to follow some of the climbers up the rugged path, my companion suffered me not to proceed. None who missed the base might travel along the higher ways. So I watched from afar, and saw how each climber moved ever more quickly the higher he ascended, until my eyes were unable to bear the brilliance of the glorious light which surrounded him. So I turned to my companion, and asked him as to the nature of the light. He bade me remember the lines my boys had repeated to me during the afternoon, and straightway I knew that the schoolmaster's true quest lay not upon Mons Literatus nor Mons Mathematicus, nor on any of the hills he climbs so often, but that it is to lead his boys to that light which is

Not of the sunlight,
Not of the moonlight,
Not of the starlight.

And so perchance he may some day find himself on that mighty mountain where I was forbidden to travel. N.

THE PRODUCT.

HE had the appearance of a brisk young clerk or a budding commercial man. There was an air of satisfaction about him, as if he felt sure that he had done very well for himself so far as his opportunities permitted. He looked like a young Englishman with a keen eye for the practical, whose considerable energies were driven by an almost too sane ambition along the paths which seemed most obviously to lead to some measure of success. There was nothing about him to suggest the bookworm, the idealist, or the man of culture. If directly appealed to, he would almost certainly have disclaimed all wish to possess qualities so needless in his career. He was certainly rather fond of music, though inclining to the showy, executive, or obviously tuneful types, and not so moved by profound harmonies or highly sensitized expression. For literature he confessed frankly he had no natural gift. He far preferred a popular novel to any kind of classic; and as for poetry, I have heard him laugh aloud, as at an excellent jest, at the very suggestion that it might appeal to him. He read Shakespeare and Milton only for strictly business purposes, and never a word more than he was obliged; and, though he was sometimes heard to express a regret that he was not more literary, he was careful to make it quite clear that such regrets were uttered merely on the grounds that a literary sense would be a decided asset to him in his profession.

What was he? He was a junior master in a secondary school for boys. The events which led him to this career are not difficult to trace. His strongest subject had always been mathematics, for which he showed a very real talent. At a comparatively early age he won a scholarship by dint of mathematical grasp and a certain force of character; his industry recommended him to his teachers, and step by step his future profession became more and more inevitable. Had he been more free to choose, would this have been his deliberate preference? It is hard to say. He was not a man to be tempted from the plain track by such will-o'-the-wisps as ideals or enthusiasms, and it is not improbable that he accepted his profession in much the same spirit as moved Sir Frank Lockwood to accept his oft-quoted *alibi*: "The best of three, my Lord!"

But, having once decided upon it, his hard practical sense led him to work with energy upon all the lines which concentrate upon "success" as the practical world understands it. At whatever study would aid him, under the advice of a standard correspondence college, to obtain his degree he was willing to work with zest and tenacity. But never for one moment would he be tempted to seek or value culture for culture's sake. The word "learning" had one meaning for him, and one

only—i.e. whatever would enable him to obtain a degree which would advance his value in the money market. In fact, we might beg to be excused for the epigram that whatever initials he might obtain the right to place after his name were in his eyes merely equivalents to the familiar L.S.D.

At the precise moment of our present analysis he is on the brink of his Intermediate (Arts); he has given up his teaching for a term to have leisure for extra study, and both he and his coaching college consider his prospects rosy. In Mathematics he certainly deserves to pass with distinction. For Languages he has an excellent memory, and his lack of literary sense will probably not prevent him from passing. The same criticism applies to his History and Geography, which he treats merely as memory subjects, with hardly a vestige of interest in their deeper human values. The subject which he dreads is English, and at the last moment he regrets that he did not take a Science instead of an Arts course. Grammar he knows well as a subject; but this does not prevent him from making notable blunders both in speaking and in writing; for it is a matter of observation that good reading will exercise a far more improving influence on grammar than the rules of the grammarians.

The difference between theory and practice is here very marked, and we must not make the error of Molière's Learned Lady, who expressed surprise that her footman should fall down after she had taught him the law of gravitation! We have to remember, therefore, that we are considering the only too common case—that of a man who substitutes for culture the mere commercial value of "cram"; and we confidently predict his success, despite the fact that he can hardly write passably in his own language, and that his own literature, the grandest in the world, is a closed book to him! Let us try, in strict fairness, to consider what he brings to his profession.

He has a genuine liking for boys, though he knows nothing of their psychology. He has a hatred of "nonsense" and a love of honest work. He will, up to a point, put himself to trouble over the boy who makes rapid progress, but is impatient of the difficulties of the boy who is slow. With a nervous boy he could do nothing; each would have a wrong impression of the other, the master thinking the boy wilfully troublesome, the boy thinking the master more or less of a brute. Within these limits imposed by his non-comprehension of the slow and of the nervous, he would teach Mathematics well and other subjects in a manner which never soared above the dead-level of routine. And of his general influence in a school, the best point about it would be that he is not a "slacker," nor would he wish others to be. Of the wonder world of culture, imagination, and vital interest; of Literature as the heart-beats of great writers; of History as the deeds of great or weak or wilful men whose acts were milestones of the world's great way; of Geography as the describing of the wondrous abiding place of the human race—of all this he could teach nothing, for the simple reason that he himself knows nothing of it. Imagination and culture would not, in his opinion, have helped him to pass his examination; yet this very examination is to stamp him as fit to be a teacher, and what is a teacher if he have not imagination and culture? Many years ago I devoted much of my leisure to evening classes for shop assistants, and I can honestly assert my belief that the average clerk or man behind the counter has far more sense of, and longing for, culture than was ever shown by this pushing young man whose life was to be devoted to the teaching of our growing English boys. But, . . . even as I write this, word has come to me that he has passed his Intermediate (Arts) and is returning to Dr. Theophrastus's Academy with a rise of salary.

The Home School, Grindelford.

WILLIAM PLATT.

THE University College of Wales has arranged for a Summer School of Geography at Aberystwyth on August 4 to 22. Five Lecture Courses will be given by Prof. Fleure and Mr. W. C. Whitehouse, and there will be field classes on alternate afternoons. The fee is £2, and correspondence should be addressed to Prof. Fleure, Aberystwyth.

POSTS IN EGYPTIAN SECONDARY SCHOOLS.

THE subject of Egyptian secondary schools is not altogether new to readers of *The Journal of Education*; but these schools are constantly increasing in number, and, consequently, the number of posts for English teachers is also increasing. The present writer, therefore, who left Egypt only last June, offers a few suggestions for the use of anyone who thinks of taking one of these posts. These schools may be roughly divided into three classes—the Government schools, schools owned by private individuals and corporations and entirely in native hands, and a miscellaneous category which includes the Victoria College at Alexandria (where there are also some non-Egyptian pupils), the American College at Assiout, and various schools up and down the country in the hands of the Society of Jesus. What I shall now say applies only to schools of the second of these classes. The Egyptian Government are now considering some new arrangements by which the Ministry of Education will keep a much closer eye than hitherto upon the native non-Government schools. Should these proposals go through there will be more inspection, certain requirements will be laid down, and the English masters will probably find themselves more comfortable. But meanwhile I can consider only the actual state of things now obtaining. As I must speak of salaries, I should mention that the Egyptian pound is equivalent to £1. 0s. 6d.

Take the case of a man in a secondary school at home, perhaps doing some Senior Local work, and drawing, say, £120 a year resident. If he wishes to remain a schoolmaster he will do well not to migrate to an Egyptian school. His social and financial position at home and his prospects are such that he would be a loser by the change. Out there he would find men doing just the same work, with pockets just as full, who in England would not be holding posts as good as the one he has just thrown up. There are men of all sorts, academically speaking, holding these posts—men from Universities, men from training colleges, men with no qualifications whatever.

All these schools take the Government secondary syllabus, which to our ideas is very elementary—e.g., fourth-year classes take, in English, one play of Shakespeare, some good English prose, such as "The Tale of Two Cities," or a number of essays from J. H. Lobban's collection, composition, and dictation; while in science, if the fourth-year student prefers the scientific to the literary side, he takes dynamics (kinematics, Newton's laws of motion, simple machines), optics, and chemistry (atomic theory, classification of elements, acid-forming elements). But many schools have only first and second year classes, which means that a teacher of English spends all his time over syntax, parsing, analysis, easy composition, and boiled-down extracts from such works as the "Arabian Nights," "Robinson Crusoe," and Dickens's novels. Generally an English master is wanted only to teach English, but there is some demand for science men, and occasionally an Englishman takes some other subject. A man is never asked to give more than 24 lessons a week, and head masters, who are all natives, prefer that he should not give so many. There is a great deal of correcting to be done, as the classes are large, often numbering about three dozen. Apart from teaching there is nothing for the Englishman to do, except, perhaps, to give some help with football. The holidays are excellent—about three and a-half months every summer, and occasional odd days.

The usual starting salary is from £18 to £20 a month, but I have known a lower figure offered. Two schools have scales, starting at £20 and going up to £32. But as a rule there is nothing definite: nothing is definite in Egypt except the sunshine; you get a rise of salary when you can. In Cairo or Alexandria the cost of living is on an average £9 a month; that covers everything. Of course if a bachelor lived alone in a small flat, or in a good *pension*, it would probably be a little more; but many single men live together in batches.

In these big cities there is plenty of society of all grades, and generally something to do. In the provinces one can live more cheaply, but the life is apt to be very, very monotonous. In some towns there are British communities of fair size, but one has to pay for one's society. Most Britishers in Egypt draw at least £26 a month, or the equivalent thereof, and they live accordingly. I know one school where each English master gets £20 or more per month, and finds that he can save a good deal of it; but this place is right away in the country, very dull, and very inconvenient if one wants to buy anything. The whole British community numbers less than 20 souls, of which the school supplies 13—eight masters, four masters' wives, one baby. I once met a schoolmaster who only got £15 a month; he, poor fellow, lived in a Greek hotel, and never saw anybody. But though he was engaged as a teacher of English, he was a Maltese. With a little luck a man may make from £20 to £25 a year apart from his salary by taking private pupils. Some schoolmasters, instead of spending the whole of the summer vacation in making holiday, take what are known as Rotation Inspectorships. These are temporary posts in the Irrigation Department of the Ministry of Public Works, and only exist for about three months in the summer. No technical knowledge is needed; a man need only be able to endure a hot sun, speak some Arabic, and ride a horse or mule. The pay is £27½ a month and railway fares, and the inspector finds his own mount and his own servant.

Said an English master in a big Cairo school one day, "I have to make my own discipline. If I go to the Head to complain about a boy, he bids me welcome, gives me a cup of coffee and a cigarette, and blandly remarks, 'Never mind this time.' " These native head masters are trying sometimes. They are poor organizers; they procrastinate. A new term begins with a shortage of textbooks; the new classrooms have not yet been finished, so that dictation lessons go on to an accompaniment of bangs from workmen's hammers. You want to spend the summer holiday in Europe, but you cannot book your passage because the Head is not sure about the date of breaking-up day. Once a man went out to a post on the understanding that his passage would be paid on a two years' agreement. When he arrived the authorities wanted to pay him the money at the end of the two years. "Mr. X—'s salary is £18 a month," said a head master; "I also paid him £18 for his passage. I can therefore say that I pay him £20 a month."

Schoolmasters need not find the climate trying. In May, when the weather begins to be warm, afternoon school is given up. The summer holiday can be spent at Alexandria or in Europe. I need not expatiate here on the attractions of Egypt; that has been done so often. The schoolmaster has plenty of time for these attractions; he is far less trammelled and cooped up than his brother in England. And most English workers in Egypt agree with the native proverb that he who has once drunk of the water of the Nile will of a surety return to drink of it again.

CORRESPONDENCE.

UNIFORMITY OF PRONUNCIATION.

To the Editor of *The Journal of Education*.

DEAR SIR,—The brief article on "Uniformity of Pronunciation" in your March issue shows some misapprehension of what is involved in the demand for a standardization of English speech. It is stated that the Simplified Spelling Society "now asks that Yorkshiremen and Irishmen, Scotsmen and Canadians, should all be required to pronounce English in exactly the same way, on pain of being pronounced ill-educated people, not fit for polite society. The ideal to be aimed at is to be uniformity and monotony. How the pronunciation thus artificially fixed

is to be rendered immune from that liability to change to which everything human is subject we are not told." As it was I who addressed the annual meeting of the Simplified Spelling Society on this subject, I may be allowed to express some disappointment that your critic apparently was not present; otherwise he could hardly have said these things. Let me give as briefly as I can the case for standardizing our speech.

Language uncontrolled varies from town to town, from village to village. Leaving out of account minor variations we get dialects, spoken in more or less extensive districts. Where there is considerable communication among people in the various districts of a country the need is felt of a speech which shall be generally intelligible. The man who uses the dialect at home and with his neighbours will speak differently when addressing people drawn from other districts. He will not only avoid words peculiar to his native dialect, he will also modify his pronunciation.

There is, as Prof. Wyld pointed out in the December number of *Modern Language Teaching* a received standard, in the direction of which dialect is modified. It is the speech of the stage, and it is the speech taught, more or less successfully, in our schools. We do not let the children talk pure dialect. As a rule they are taught a compromise between the standard and dialect speech. If there is frequently something approaching failure here, it is due to various causes. Teachers are often indifferent to the beauty of the spoken language; examining bodies have not instituted oral tests in English; phonetic training is not yet regarded as an essential part of the English teacher's equipment; there is no definitely established standard.

Is it not simply ridiculous to expect our teachers to correct the children's speech, yet to refuse to tell them how? Instead of the present muddle we want the distinction of Dialect and Standard to be made clear. Now, the teacher too often calls a dialect pronunciation "wrong," and corrects it to something which is really no better. Our children should be interested in their dialect and told that it is "right" (if indeed they speak true dialect and not the mongrel speech often heard in our large towns); and they should also learn that—unless their activities are to be confined throughout life to a narrow district—it is very important for them to acquire a form of speech more widely acceptable; and in any case it is well for them to learn to read aloud prose and poetry with the best pronunciation that can be taught. No one denies the charm of many of our dialects; but would anyone be so bold as to claim that one of them should be singled out as superior to all others and recommend its adoption on the stage, in the pulpit, in the schoolroom?

Our ideal is said to be uniformity and monotony. Uniformity of pronunciation? Yes, we desire a rational spelling based on and safeguarding a generally accepted form of good English. But monotony? Many people now pronounce English in much the same way, yet without monotony, and will continue to do so when we have achieved our object. For we are not standardizing the vocal organs, the varying shapes and activities of which account for the *timbre* of the individual voice, and we are not standardizing the phrasing of the sentence or the intonation, which are the factors that make speech expressive.

Finally the idea that there must be change in speech has its justification only when we consider dialect, or confine our attention to the vocabulary. But when we consider standard speech the conditions are altogether different. Only those ignorant of the development of our language during the last century can remain blind to the growing tendency to uniformity in educated English speech. Given compulsory education, teachers with a phonetic training, and a rational spelling that represents a generally recognized form of good English speech, and there will be no change at all. "The liability to change to which everything human is subject" is a specious phrase that should not delude. You need merely consider our miserable spelling to see how little liable to change some human things are; it is practically the same as it was 150 years ago. Why? Because of the very same

influences that might, with much greater advantage, be devoted to fixing our speech.

I know that some phoneticians emphasize the varieties and changes in the spoken language, and sometimes support the view that all speech must change. I am disposed to think that they have not devoted sufficient attention to the fundamental differences between dialect and standard speech: that dialect is acquired unconsciously, and has no written or printed form to serve as a record of the pronunciation, whereas the standard speech is taught and has (or should have) an adequate representation in the printed word. As Sweet said, phonetic writing is the only means we have of preserving our present method of pronunciation.

Why should it be impossible to lay down what is the most beautiful way of speaking our language? And, when we have determined the standard, why should we not use the means we possess of preserving it from deterioration?—Yours &c.,

Simplified Speling Societi, WALTER RIPPMAAN.
44 Great Russell Street, London, W.C.

SLANG AND ARGOT.

To the Editor of The Journal of Education.

DEAR SIR,—All the French people I know, not excluding myself, repeatedly add to the gaiety of the English nation by honestly endeavouring to speak correct English, and I hope I am not rude if I say that Englishmen visiting Paris and desiring to make a proper return need not have recourse to slang.

I should like to warn your readers that "il y a argot et argot." They will make themselves ridiculous and unpleasant if they try such words or phrases as *tire-jus*, *lardon*, *casser la jupe*, *se barber*, in circles where *genou*, *passer l'arme à gauche* are permissible. There is no need ever to use slang, and this is very fortunate, as even those who, like Mr. F. Bayford Harrison, would seem to be possessed of a fair stock are liable to err at every turn. I append a few obvious examples:

Pautruche should be *Pantruche*. *Porter l'arme à gauche* is a military phrase; in its figurative acceptance it reads: *passer l'arme à gauche*. *Casquer* does not mean to *pass the hat round*, but (if I may venture on English slang) *to shell out*, *to stump up*. *Carré* does not refer to first-year students; they are called *biau(ths)*; similarly *cube* applies, very naturally, to third year. *Etre gris* is not slang. *Litré* gives it as familiar, but *Hatzfeld* does not make that restriction.

Gambettes refers only to a woman's legs. *Riz, pain, sel*, is not applied to soldiers employed on commissariat service because of their diet, but because the dealing out of these substances is (supposed to be) their chief business. *On dirait du veau* has been out of use for twenty years or so. *Se barber* does not mean to put on a beard; it is just a synonym of *se raser*, &c.

Lastly, I cannot make out what Mr. Bayford Harrison means when he states: "As a body of men the police are called in Paris 'La Rousse,' though they are not redder, even when indignant, than other people." I have heard of people "losing their hair" when in a temper, but I was not aware that they could also change the colour of it. I hope Mr. F. B. H. does not imagine that *roux* can be used of "blushing," or of "becoming flushed"! *Etre roux* is to be red-haired, nothing else.—Yours very truly,

F. BOILLLOT.

INTEREST AND HARD WORK.

To the Editor of The Journal of Education.

SIR,—In an article in the March number of *The Journal* I note the following:—"It is one of the drawbacks of modern methods of teaching, with their insistent appeal to interest, that there is a growing unwillingness and incapacity to undertake any piece of hard work."

Are we to understand, then, that children only work willingly and hard at things in which they are not interested? Would the writer of the article endorse the words of the parent who lately asked us to "provide" drudgery for his boy, as he understood that, under the present-day régime of "interest," drudgery was entirely left out. Every modern teacher who appeals to interest knows that boys and girls are capable of any amount of hard work and love hard work if they are doing the things they really care about. Surely it is a tribute to our modern and rational educational methods that drudgery is no longer arbitrarily imposed upon the child as an end in itself and because it is "good for him," but that it arises naturally out of a keen interest and desire to know. The rationally taught child accepts drudgery as a means to a very much

to be desired end, so he no longer toils aimlessly at a long list of verbs in a language of which he has probably never heard a single spoken sentence. On the contrary, he already knows something of the people who used the language; he has sung their national songs, he has read simple stories and spoken simple words, and he knows that the verbs are the gateway to further knowledge, and not to be learnt only "because old Stodgers never likes to see a fellow have a minute to himself."

Not for one moment do we spare the children the necessary hard work, but we clothe dry bones until drudgery, transfigured, becomes real and living. Further, work must not be measured by the time given to it, for the interested student will put as much work into one hour as the bored student into many.—I am, faithfully yours,

SUSAN PLATT.

The Home School, Grindleford, North Derbyshire.

March 3, 1914.

[It is not fair to our contributor to treat "hard work" and "drudgery" as synonyms. "Labor omnia vincit improbus" is one side of the shield; "the labour we delight in physics pain" is the other.—ED.]

A MUSIC TOUT.

To the Editor of The Journal of Education.

DEAR SIR,—In *The Journal of Education*, dated February 2, 1914, there appeared a paragraph about "a certain London Academy." In case the careless way in which the capitals have been inserted should lead people to suppose that the Institution in question was the London Academy of Music, we should like to state that we have never employed any tous, and that we never under any circumstances pay any premium for the introduction of pupils.

We are willing to leave this matter in your hands, feeling convinced that you will take the proper steps to remove the false impression occasioned by the publication of the paragraph in question.—Yours faithfully,

E. LE BRETON MARTIN.

The London Academy of Music, 22 Princes Street,
Cavendish Square, W.

[In publishing the complaint of a Music Mistress we had no notion what Institution she was referring to. We accept unreservedly the *démenti* of the Secretary, and express our regret at having admitted a letter which could be interpreted in such a sense. Will our correspondent kindly communicate with the Editor and assist him in exposing the objectionable Music tout?—ED.]

SAFE NOVELS.

It Happened in Egypt. By C. N. and A. M. WILLIAMSON. (6s. Methuen.)

Personally conducted tours are not much to our taste, but to travel with such guides as Mr. and Mrs. Williamson is another story. The narrator, Lord Ernest Borrow, *alias* the Duffer, is a young English diplomatist on leave of absence with the object of exploring "the Mountain of the Golden Pyramid," the traditional tomb and treasure-house of the Queen Candace, of which he and his old chum Captain Anthony Fenton have discovered the secret. At starting on board the P. and O. he meets an old flame of his, Biddy O'Brien, the widow of a disreputable Fenian, now travelling under an assumed name to escape the vendetta that pursues her, as the companion of a multimillionaire American heiress, who likewise, for a lark, has changed parts with her governess. To complete the cast we are introduced to Sir Marcus Lark, a Midas, who turns all he touches to gold, and is now in Egypt to organize a touring scheme that shall take the wind out of Cook. He has somehow got scent of the Golden Mountain and obtained from the Government a permit to explore, but he proposes to strike a bargain and relinquish his claim if Fenton and Lord Ernest will agree to run and personally to conduct his first grand tour of the Nile. Thus we get the party well under weigh, with Lord Ernest as cicerone and Fenton disguised as an Arab dragoman. There are endless plots and counterplots. They are tracked by the Fenian vendetta; they are forestalled at the mountain by one of their passengers who has stolen the secret, but the curtain is rung down to a chime of marriage bells. Some of us will remember Becker's "Charicles" as a bitter pill with a thin coating of romance. In this case the fear is that the rich humour and varied incident will make the reader skip the vivid and truthful description of modern Egypt and its ancient monuments.

8 *The Way Home.* By BASIL KING. (6s. Methuen.)

Charlie Grace is the son of Dr. Grace, Rector of St. David's, a fashionable church in New York. He has been destined by his mother, another Hannah, for the Ministry, but as he grows up he is scandalized by the hollowness of these professors of religion and soured by the snobbery of his early playmates, who cut him at college as a poor man. So he casts religion to the winds, and vows he will have no other god than Mammon. The Margaret to this

modern Faust is Hilda Penrhyn, a *schöne Seele* who fascinates him by her ethereal beauty and "eyes conversing with the skies," and he marries her in spite of her poverty. Why she should have married him, an impenitent sinner glorying in his shame, is not explained. After marriage the rift between the two widens, but her love continues; but so far from calling him to repentance, she is ready to immolate herself by abetting a divorce, and so giving him a young and innocent girl with whom he has fallen in love. But it turns out that the girl has given her heart to another, and when the curtain falls on the dying man, his wife gives him absolution. It was not the skyeey eyes, but the sky that shone through them, with which he was in love. The cover announces a problem novel on religion. As such we must pronounce it a failure. The hero never interests us enough to make us care to know the answer to the verdict, *gerichtet* or *gerettet*. It is for the sake of the minor characters and the clever pen-portraits that we recommend the novel.

The Way of these Women. By E. PHILLIPS OPPENHEIM. (6s. Methuen.)

Mr. Oppenheim has a fatal facility for weaving clever, yet utterly artificial, plots. In the present instance he has seemingly set out with the determination to exasperate us to the point of fury by the utter incapacity of any one of his characters to do or say anything at all approaching the human. We wonder what sort of reading human sayings and human doings would make. Mr. Oppenheim is not satisfied with ordinary folly and wickedness. The noble Marquis who on the very first page steps out of the first-class smoking carriage next to the engine—whoever saw a first-class smoking compartment next to the engine?—is but one of a number of elevated, but exceedingly wicked and stupid, persons who are leagued together to prevent Jermyn from marrying his little actress. We feel personally affronted that we should be deprived of that satisfaction which is by the convention of novelists due to readers—namely, of seeing the hero wed the heroine, in spite of all opposition, on the last page. Jermyn is too big a fool even to do that. We can only hope that the equally foolish Sybil eventually found a congenial mate.

The Golden Barrier. By AGNES and EGERTON CASTLE. (6s. Methuen.)

We do not know what general impression the authors wished to convey to us concerning the character of Magdalen Tempest. In our particular case it happens to be one of nausea. A girl who, after winning such a husband as Captain Denvers, deliberately throws away the treasure of his love and protection richly deserves the fate which she so nearly met at the hands of those unspeakable cads, Lady Adelaide Simon and Isidore Blaise. We are glad that such creatures as the latter do not exist in real life. And we are still more glad that wealthy and beautiful young ladies are not given to playing the "Lady Maecenas" as this one was so fond of doing. "All's well that ends well" is but a hollow mockery of artistic justice when our feelings and our intelligence have been consistently outraged through the preceding three hundred and sixty pages.

The Sea Captain. By H. C. BAILEY. (6s. Methuen.)

Your modern reader loves a pirate. Who does not covetly mourn for Hook's untimely end at the hands, or rather the jaws, of the crocodile? Who does not, at least secretly, revel in accounts of the exploits of a Morgan or a Kidd? Every healthy mind shares the sentiments which Sir Frederick Treves openly avowed in his charming "Cradle of the Deep." Time has softened the asperities of the pirate's character—the ideal pirate is ever a gentleman for all his villainy. This particular gentlemanly pirate who was once only a "silly shepherd," as folk used to call him, remains, for all his humble origin and for all his piracy, an English gentleman. If such a captain never set sail in the days of good Queen Bess he ought to have done so, and it is a blot in the escutcheon of his generation that he did not. So this tremendous person, who was once no more than Diccon the shepherd, was moved by the love of a lady to become that terror of nautical evildoers known to posterity as Captain Dick Rymington, not the least of whose many exploits was, metaphorically speaking, to pluck Barbarossa's very self by the beard, and hold his chief lieutenant, Dragut Reis, to ransom! But that is as much as we may, in fairness to the author, divulge of his altogether charming story of great hearts, great deeds, marvellous escapes from death, and beautiful ladies who could never tempt an English gentleman from his allegiance to a fair lady in far-off England, feluccas and galleys and Spanish treasure and Spanish treachery and all that delightful paraphernalia which we followers of Peter Pan love so well.

War. By W. DOUGLAS NEWTON. (2s. net. Methuen.)

The book, like the reality which it depicts, gives one furiously to think. To think, if one has not sufficiently schooled oneself in the art of shirking unpleasant truths. We fear many of our countrymen are hidebound beyond the impress of even Mr. Newton's slings

and arrows. If not, if there is still left a vulnerable spot, "War" should of a surety seek it out, and cause the peace-loving citizen to realize the horror of that which he seeks to escape merely by refusing to think of it. We do not altogether like Mr. Newton's artistry. He is inclined to use very crude colours, and to lay them on to a thickness approaching the grotesque. In our humble experience of soldiering in peace time we have thus far failed to make acquaintance with officers who speak as they do in "War." Perhaps that is our misfortune. We have not the pleasure of knowing whether the author speaks of the scenes which he portrays from the standpoint of practical experience of active service conditions. Parts of his work suggest that he does, whilst others raise the suspicion of a lay mind somewhat hazy as to actualities. But it needed, perhaps, some purple patches to rouse from his lethargy "the man in the street." Upon all vital matters—the frightful suddenness, the ghastliness of the attendant circumstances of war, and the futility of resistance except on the part of men trained and organized as our continental neighbours know how to train them—upon such matters as these Mr. Newton is absolutely sound, and deserves to be ranked with the author of "The Green Curve," which is the highest compliment we can pay him. We came across a remark the other day by a celebrated pacifist to the effect that it is no longer the horrors of war, but the horrors of peace, with its intolerable burden of armaments, that are to be shunned. Such an argument would not be tolerated in the case of an attempt to evade a visit to the dentist or the doctor or the payment of insurance premiums. Its utter immorality should be borne in upon the mind of any seriously inclined citizen who has grown unaccustomed to grasp what war really signifies for the individual. We should advise such an one to contemplate what we can assure him is a substantially faithful rendering of a theme too long forgotten or, worse, ignored.

The Happy Hunting Ground. By ALICE PERRIN.
(6s. Methuen.)

Miss Perrin's tale of Caroline Gordon's hunt for a husband is skilfully and convincingly told. The characters bear the impress of reality, and, as such they make one feel the sordidness of the conventional view of that matrimony which is by courtesy termed "holy." From beginning to end of the story there is no suggestion of any real love. And it is precisely for that reason that the events depicted appear so natural. Captain Falconer is simply a military cad, Francis Wendover is a beast, John Severn is irri-

tatingly unromantic, and Caroline herself is uninspiring simply because she regards marriage from a commonplace point of view. But they are, each and all of them, very real and live people, and they act in a very human manner. We feel, then, that we must not complain if they are just a trifle too ordinary for a taste educated to an expectation of the romantic unfolding of stories of passion.

SPECIMEN OF TEACHERS' REGISTER.

OUR readers may care to see two or three specimens from the lists of teachers already approved by the Council as indication of the form in which the names will appear in the printed Register.

ADAMS, JOHN [Jan. 1, '14]

Att. M.A., B.Sc., LL.D. Glasgow; F.C.P.; B.E. Cert. (Scot.).
Trg. Free Church T.C., Glasgow.
Exp. Prof. of Education, Univ. of London, 1902-
Add. 23 Tanza Rd., Hampstead, London, N.W.

BROWNING, OSCAR [Jan. 1, '14]

Att. M.A. Cantab.
Exp. A.M. Eton, 1860-1875; Tutor, King's Coll., Camb.,
1875-1909; Prin. Camb. Univ. T.C., 1891-1909.
Add. King's Coll., Cambridge.

CLEGHORN, ISABEL [Jan. 1, '14]

Att. B.E. Cert., L.L.A. St. Andrews; M.A. Sheffield and
Wales.
Trg. Stockwell T.C.
Exp. H.M. Heeley Bank Girls' Sch., Sheffield.
Add. Heeley Bank Girls' Sch., Sheffield.

STRONG, THOMAS BANKS [Jan. 1, '14]

Att. M.A., D.D., Oxon.
Exp. Class. and Theol. Lecturer, Christ Church, Oxford,
1886-1901; Dean of Christ Church. Vice-Chancellor,
Univ. of Oxford.
Add. The Deanery, Christ Church, Oxford.

HORLICK'S MALTED MILK

MALTED BARLEY, WHEAT, and MILK in Powder Form

The wholesome nutrition of pure rich milk and choice malted grain, supplying strength and vigour, with little tax on digestion. Instantly ready for use by stirring briskly in hot or cold water.

NO COOKING REQUIRED.

Equally useful to both

TEACHERS AND SCHOLARS.

A glass of "Horlick's" is an ideal lunch, as a delicious and nourishing food-drink may be easily prepared in a moment. **Keep a bottle in your desk.** Horlick's Malted Milk will be found to supply the strength and energy so necessary during the long hours of study, and its use will prevent lassitude.

An efficient corrective of insomnia, taken hot before retiring.

HORLICK'S MALTED MILK LUNCH TABLETS.

A delicious food confection, to be dissolved in the mouth. Especially useful during study for exams.

In Glass Bottles, 1/6, 2/6, 11/-, at all Chemists and Stores. Liberal Sample, either in Powder or Tablet Form, for trial free by post on request.

HORLICK'S MALTED MILK CO., SLOUGH, BUCKS.

BRITAIN AND HER NEIGHBOURS.

Correlating Home and Foreign History.

With Pictorial Time-Charts in Red and Black, and a series of Reproductions of Famous Paintings beautifully printed in Colour, and numerous Illustrations in Black and White, and Maps and Plans.

IN SIX BOOKS:

Book I.—*Tales from Far and Near.* With 16 coloured illustrations. 10d.

Book II.—*Tales of Long Ago.* With 16 coloured illustrations. 1s.

Book III.—*The Beginnings.* 55 B.C.—1066 A.D. With 12 coloured illustrations reproduced from famous pictures, and pictorial time-charts, &c. 1s. 3d.

Book IV.—*Lord and Vassal.* 1066—1485. With 12 coloured illustrations reproduced from famous pictures, and pictorial time-charts, &c. 1s. 6d.

Book V.—*The New Liberty.* 1485—1688. With 12 coloured illustrations reproduced from famous pictures, and pictorial time-charts, &c. 1s. 8d.

Book VI.—*The Modern World.* 1688 to the present. With 12 coloured illustrations reproduced from famous pictures, and pictorial time-charts, &c. 1s. 8d.

A New Series correlating History and Geography on the most modern lines.

LANDS AND THEIR STORIES.

This series of books embodies an attempt to provide a fully correlated scheme of History and Geography teaching. The subjects are not only naturally related, but to a great extent supplementary, History supplying the element of human interest, and Geography insisting on those causal connexions so easily lost sight of in the general interest aroused by History. To utilize this relationship for the better teaching of these kindred subjects, History and Geography are in this series brought together in a combined course.

IN SEVEN BOOKS.

Beautifully Illustrated Prospectus, giving full particulars of the Series, post free on application.

Prospectuses giving full particulars of above books will be sent post free on application.

**MADAME
BERGMAN ÖSTERBERG'S
PHYSICAL TRAINING COLLEGE,
DARTFORD HEATH, KENT,
FOR RESIDENT STUDENTS.**

The College, the first of its kind in England, was opened in 1885, with the view of training educated women as Teachers of Scientific Physical Education.

The Course of Training conducted by a large and competent staff of teachers, extends over two years. It includes the study of Anatomy, Physiology, Hygiene, Anthropometry, and Theory of Movement. In practical subjects instruction is obtained in Ling's Swedish Gymnastics, Dancing, Outdoor Games, and Medical Gymnastics and Massage. At the end of the Course, examinations are held and certificates of theoretical knowledge and practical efficiency in teaching are awarded to successful students.

The College, which provides 50 separate bed-sitting rooms and several large studies, is situated on very high ground, gravel soil, on the confines of an extensive heath, half an hour from town. It stands in its own fine grounds of fourteen acres, which contain an Outdoor Gymnasium, Running Track, Cricket and Hockey Grounds, Lawn Tennis Courts. The Indoor Gymnasium, 50 ft. by 25 ft., and the Medical Gymnastic Room, 50 ft. by 35 ft., and the apparatus having been designed and executed in Stockholm.

The immediate neighbourhood offers over one thousand children for the students' practice as teachers. Hundreds of posts have been obtained through this College, a list of which is to be obtained with the Prospectus.

Students admitted in September.

For particulars apply—THE SECRETARY.

**MADAME
BERGMAN ÖSTERBERG'S
UNION OF TRAINED GYMNASIAC TEACHERS.**

Ling's Swedish System.

Aim of the Union: To advance the cause of Physical Education on scientific lines.

In placing members of this Union as Teachers in Schools, careful and discriminating choice is exercised, and the exact requirements of each School specially considered.—PHYSICAL TRAINING COLLEGE, DARTFORD HEATH, KENT.

93 FIRST PLACES.

FACTORY INSPECTORS.

(Age 21 to 38) (Salary £200 to £750)
From D. Buchanan, M.A.—1st.—I am pleased to inform you that I have secured First Place. My thanks are due to you for the admirable tuition which you afforded me. I wish to mention particularly the excellent hints provided in Arithmetic, Tabular Summary, and Précis. In Economics, too, your tuition was excellent.—D. BUCHANAN, Port Glasgow (1st, Factory Inspectors, Last Exam.).
3 Successes in Last Exam.

PATENT OFFICE EXAMINERS.

(Age 20 to 25) (Salary £150 to £700)
Last Exam. Patent Office.—I had hardly expected this result, but in any case I should be bound to acknowledge the great value of your tuition; it is without doubt the best method of preparation for an examination of this kind, where one needs expert guidance.—H. E. COLLINS (9th place, Last Patent Office Exam.).
2nd, 3rd, 4th, 9th, 12th, &c., Places in these Exams.

SECOND CLASS CLERKS (N.H.I.).

(Age 20 to 25) (Salary £100 to £350, &c.)
From C. N. French, B.Sc.—Full Marks for Further Mathematics.—I have much pleasure in acknowledging the value of the services of the "I.C.C."—You can rely on my recommendation.—CECIL N. FRENCH (4th National Health Insurance (Wales) 2nd Class Clerks, Last Exam.).
1st and 8th Places also taken Last Exam.

JUNIOR APPointments (C.S.).

(Age 18 to 19½) (Salary £100 to £350, &c.)
2nd.—Gained 2327 Marks in 3 Months.—After three months' course with you I have risen 109 places and my marks have increased 2327. In Higher Maths. my marks increased 1570.—E. S. WOOD (2nd, Junior Appointments).
6 First, 8 Second, 6 Third Places, and 186 Successes in these Exams.

INDIAN POLICE APPOINTMENTS.

(Age 19 to 21) (Salary £250 to £3000)
2 Successes Last Exam.,
Previous Exam. 4 out of 5 successful.

London Matriculation, 1914.—The papers and solutions in Mathematics were of especial value to me. All papers were promptly returned and conscientiously corrected. Your course is economical both of time and money. In short, you have completely satisfied me of the efficacy of the Correspondence System of tuition in connexion with examinations taken after leaving school.—D. A. EDWARDS (successful London Univ. Matric. Exam., Jan., 1914).

London Matriculation.—I cannot but express my best thanks to the Imperial Correspondence College staff for the useful hints, accurate and helpful solution sheets, and general aid so readily given.—W. WRIGHT.

London Matriculation.—I attribute my success to the admirable coaching of your College and to the efficient way in which all queries were answered and model solutions, &c., were supplied.—F. H. GOODMAN.

Numerous Successes in University Exams.

Gerstenberg Scholarship in Economics.—I have taken First Place (Asst. Surveyor of Taxes). I wish to acknowledge my indebtedness to your tuition, and I have much pleasure in expressing my entire satisfaction.—J. J. CATER (secured Gerstenberg Scholarship).

£50 a year for 3 years.—1st Place County Scholarships, N.U.I.—I have received the result of the exam. for County Scholarships in the N.U.I., and I find I have taken First Place. This entitles me to £50 a year for 3 years.—ED. DUFFY, Dublin (First Place).

Details of Examinations, Courses, &c., post free. Inquiries invited. All communications strictly confidential. Address—

LONDON, W.**

"There is an absolute necessity for advertising; there is a great eagerness to compete for attention, and no one gets it unless it is by giving, as it were, so many strokes of the hammer, one after the other, to compel people to notice what is going on."—W. E. GLADSTONE.

PATON'S List of Schools and Tutors.

AN AID TO PARENTS IN THE SELECTION OF SCHOOLS.

1216 pages, crown 8vo. Red Cloth, 2s.; post free, 2s. 6d.

THIS BOOK secures for its advertisers a far larger proportion of *definite results* than any other publication of its kind.

LONDON,
13.10.1913.

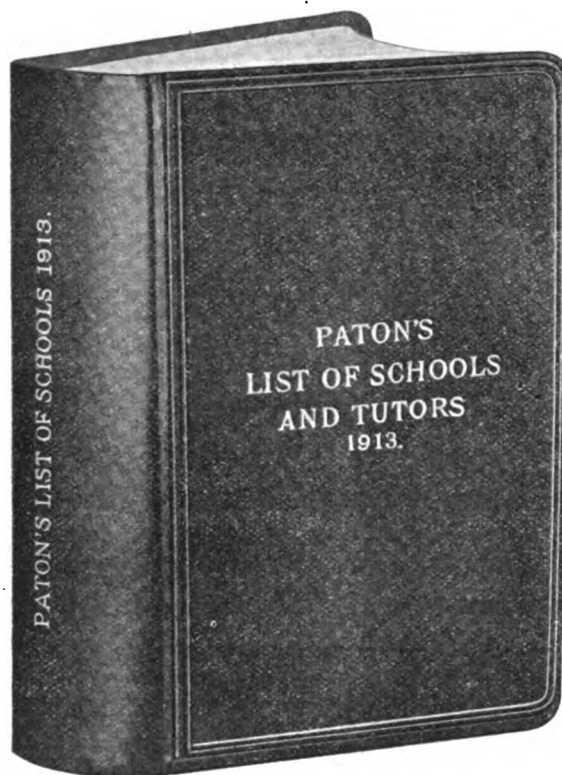

"I have sent my little boy to — School. He is very happy there, and well looked after, and I am very pleased with everything I saw there. Many thanks for the *great assistance* you were to me."

HAMPSTEAD,
2.10.1913.

"We have to thank you very much for your courteous assistance in placing D—. It is just the school she required, and we feel we were fortunate to have had the benefit of your knowledge in the matter. Next year we shall be sending our younger daughter to school, and shall certainly seek your advice again."

"The majority of my boys come, of course, from personal recommendation, but I may say that of those who come as a result of advertising, practically all have heard of the School through your List of Schools."

"I advertise in your book because I have found it of great use to me, and the best possible way of making the School known."

COLCHESTER,
13.9.1913.

"I am extremely obliged to you for the great help you were to us, and for sending us such a splendid selection of schools, and shall most highly recommend your Agency to any parents requiring schools, for with your help it is no trouble at all."

MANCHESTER,
14.7.1913.

"I cannot thank you enough for your help in finding me a suitable school. I am exceedingly pleased with — School in every way."

"I consider that your book fills an awkward gap, especially in cases where Schools do not go in for general advertising."

"I have recommended my Governors to continue our advertisement in your book because it appears to be a useful medium for bringing this School before a large number of people whom it would be impossible to reach personally."

The SEVENTEENTH Annual issue is now being prepared for Press.

A SPECIMEN COPY, with full particulars and definite proof of value to clients, will be forwarded to Head Masters or Head Mistresses on application to

Messrs. LONGMANS & CO'S Books

LONGMANS' HISTORICAL SERIES

By T. F. TOUT, M.A., *Professor of Mediæval and Modern History in the University of Manchester.*

Book I.—**A First Book of British History.** From the Earliest Times to the Death of Edward VII. With 85 Illustrations, 13 Tables, and 25 Maps and Plans. **2s. 6d.**

Book II.—**A History of Great Britain.** From the Earliest Times to the Death of Edward VII. With 146 Portraits and other Illustrations, 8 Tables, and 35 Maps and Plans. **3s. 6d.**
(Book II is also issued in Two Parts, **2s.** each.)

Book III.—**An Advanced History of Great Britain.** From the Earliest Times to the Death of Edward VII. With 29 Tables, and 63 Maps and Plans. **5s.**
(Book III is also issued in Three Parts, **2s.** each.)

By SAMUEL RAWSON GARDINER, D.C.L., LL.D.

A STUDENT'S HISTORY OF ENGLAND.

Vol. I: B.C. 55—A.D. 1509. With 173 Illustrations. Crown 8vo, **4s.**
Vol. II: 1509—1689. With 96 Illustrations. Crown 8vo, **4s.** Vol. III: 1689—1910. With 109 Illustrations. Crown 8vo, **4s.**
COMPLETE IN ONE VOLUME. With 378 Illustrations. Crown 8vo, 12s.

Preparatory Questions on S. R. Gardiner's "Student's History of England." By R. SOMERVELL, M.A. Crown 8vo, **1s.**

A SCHOOL ATLAS OF ENGLISH HISTORY.

With 66 Maps and 28 Plans of Battles, &c. Fcap. 4to, **5s.**
Longmans' Elementary Historical Atlas. Containing 25 Maps in Colour. Abridged from the above. Post 4to, **1s.**

OUTLINE OF ENGLISH HISTORY. B.C. 55—A.D. 1902.

With 96 Woodcuts and Maps. Fcap. 8vo, **2s. 6d.**
. SUMMARY OF ENGLISH HISTORY, based on the above. By W. REEP. Fcap. 8vo, **6d.**

By CYRIL RANSOME, M.A.

A SHORT HISTORY OF ENGLAND.

With Tables, Plans, Maps, Index, &c. Crown 8vo, **3s. 6d.** Or in Two Parts, **2s.** each. Part I: To 1603. Part II: 1603—1901.
. A SUMMARY OF THE ABOVE. With 22 Maps and Plans and 34 Genealogical Tables. **1s.**

By WILLIAM WATSON, A.R.C.Sc., D.Sc. (London), F.R.S.,

Assistant Professor of Physics at the Royal College of Science, London.

THIRD IMPRESSION.

TEXTBOOK OF PRACTICAL PHYSICS.

A Book of Reference for the Student working in a Physical Laboratory.

With 278 Illustrations. Large crown 8vo, **9s.**

FIFTH EDITION (NINTH IMPRESSION).

A TEXTBOOK OF PHYSICS.

With 579 Illustrations and a Collection of Examples and Questions, with Answers. Large crown 8vo, **10s. 6d.**

NEW EDITION (1914).

INTERMEDIATE PHYSICS.

With Diagrams, 8vo, **6s.** net.

GANOT'S TREATISE ON PHYSICS.

Translated and Edited by E. ATKINSON, Ph.D., F.S.C., and Revised by A. W. REINOLD, M.A., F.R.S.
EIGHTEENTH EDITION. With 8 Coloured Plates and Maps, and 1,106 Woodcuts. Crown 8vo, **15s.**

GANOT'S NATURAL PHILOSOPHY.

Translated and Edited by E. ATKINSON, Ph.D., F.S.C., and Revised by A. W. REINOLD, M.A., F.R.S.
TENTH EDITION. With 7 Plates, 632 Woodcuts, and an Appendix of Questions. Crown 8vo, **7s. 6d.**

LONGMANS, GREEN, & CO., 39 Paternoster Row, London, E.C.

BOOKS IN GREAT DEMAND

A CHILD'S BOOK OF ARITHMETIC.

By HERBERT MCKAY, B.Sc. (Lond.), Honours in Mathematics. With many Illustrations by Lilian Fairweather. Crown 8vo. **10d.**

A novel and amusing little book on Arithmetic. The subject is presented in a most attractive form, and the word "problem" is robbed of all its terrors.

SOME SECRETS OF NATURE.

Short Studies in Field and Wood. Illustrated with Coloured Plates and Photographs from Nature. Crown 8vo. **1s. 6d.**

This book is designed primarily as a class-book for children of eleven years of age and upwards. Its aim is to supplement and give unity to the ordinary Nature lesson, to inculcate a love of the study of plants and animals as they live and grow, and to teach children to see and to think.

THE ROMANCE OF NATURE.

Studies of the Earth and its Life. With an Introduction by the Rev. ALFRED THORNLEY, M.A., Superintendent of Nature Study to the Nottingham and Leicestershire Education Committees; Lecturer on Nature Study in the Midland Agricultural and Dairy College, Kingston, Derby. Illustrated with Coloured Plates and Photographs from Nature. Crown 8vo. **2s.**

This book will serve as a more advanced class-book. It will also be useful to teachers as an indication of the lines to be followed in planning a systematic course of lessons in this subject. While in no sense attempting to exhaust any one branch, the book gives a brief account of earth-lore, dealing successively with the history and structure of the earth, and the common forms of plant and animal life that inhabit it. The aim throughout is to provide material to stimulate observation and independent thought.

A TEXTBOOK OF ELEMENTARY BUILDING CONSTRUCTION.

By ARTHUR R. SAGE, Chief Lecturer in Construction and Mechanics of Building, and WILLIAM E. FRETWELL, Chief Lecturer in Plumbers' Work, Sanitary Engineering and Heating and Ventilating at the L.C.C. School of Building. With many Diagrams. Crown 8vo. **3s. 6d.** net.

This book is intended for students of Elementary Building Construction as a first year's course, leading up to the Lower Examination of the Board of Education. It should also be useful to students preparing for the various professional examinations, of which building construction and sanitary engineering form part.

A THIRD-YEAR COURSE OF ORGANIC CHEMISTRY.

By T. P. HILDITCH, D.Sc. (Lond.), F.I.C., Author of "A Concise History of Chemistry." With Plates and Diagrams. Crown 8vo. **6s.**

This book completes the course of organic chemistry whose earlier stages have been dealt with by Dr. Dunstan (Part I) and Mr. Thole (Part II). It is occupied for the most part with the systematic study of the different groups of heterocyclic compounds, especially those of practical or commercial value. The work is suited to the needs of honours students in this subject, either for the B.Sc. or the Board of Education examinations.

THE PAGEANT OF BRITISH HISTORY.

By E. M. WILMOT-BUXTON, F.R.Hist.S. With 2 Plates in Colour and 8 other Illustrations. Crown 8vo. **1s. 6d.**

This book attempts to show, as in a pageant, the course of English history by a series of word pictures, and thus by a vivid appeal to the imagination of the children to arouse their interest in the drama of the past.

THE ROMANCE OF BRITISH HISTORY: or, Britain's Rise from Savagery to Civilization.

By JOSIAH TURNER. With a Frontispiece in Colour and 8 other Illustrations. Crown 8vo. **1s. 6d.**

This volume contains a more systematic treatment of the subject on concentric lines, with special emphasis on the great movements that have left a permanent mark on the history of the country, and tracing the influence of geographical conditions on historical development.

THE GROWTH OF MODERN BRITAIN.

By B. H. SUTTON. With a Frontispiece in Colour and 8 other Illustrations. Crown 8vo. **2s.**

This volume, after summarizing the leading events up to 1830, deals in greater detail with the modern period from 1830 to 1910. It is written on entirely new lines, and a considerable amount of space is devoted to industrial progress and social conditions. The development of local government is sketched in simple language, and the moral of history is applied to the practical problems that confront the democracy of to-day.

JUNIOR SCRIPTURE EXAMINATION PAPERS.

Vol. I. Old Testament. By Rev. W. WILLIAMSON and Rev. S. A. P. KERMODE. Fcap. 8vo. **1s.**

[Junior Examination Series.]

These papers, based on the subjects set in recent years, and graded according to the standard of Preliminary, Junior, and Senior Students in the Cambridge Local and kindred examinations, will save time for teachers, and enable students to test themselves.

OCCASIONAL NOTES.

Local Taxation. THE recommendations of the Final Report of the Departmental Committee on Local Taxation will, if adopted, revolutionize the present system of State and local aid for education. Questions relating to local taxation have been under discussion for many years, and a solution for the serious difficulties which have arisen, especially as the result of the Education Act of 1902, is long overdue. We are doubtful, however, whether the last word has been said by the Departmental Committee on any of the numerous aspects of the question. As to education, the proposal is that a block grant should be distributed for elementary education on a new formula, based on a standard expenditure of 60s. per child and a standard rate of 7d. The formula proposed is 36s. per child (that is, two-fifths of the standard expenditure), plus two-fifths of the total net expenditure on the produce of a 7d. rate, certain limitations being also proposed to meet the case of parsimonious authorities which attempt to escape with a very small education rate.

The Financial Aspect. ON the basis of the statistics of 1911-12, the adoption of the proposals will involve an extra State grant of nearly £2,000,000 a year, which must be regarded as a generous concession to local demands. London would stand to gain nearly half-a-million, or the equivalent of nearly a 3d. rate. Poor districts will, as a rule, gain most, and places like Eastbourne and Bournemouth will have to raise an extra rate of nearly 3d. The principle of a

block grant for the whole area of Local Authorities rather than for individual schools will be generally welcomed. On the other hand, incentives to regularity of attendance are removed and statutory provisions as to free education appear to go by the board. While the clerical work at the Board of Education may be much simplified—a most desirable reform—the control of the Board over elementary education is not likely to become less powerful. As to grants for secondary and higher education, no alterations of the present system are recommended, except that for the "whiskey-money" should be substituted a grant of the same amount. Why secondary schools should be treated in this step-motherly way is not apparent. Can it be because their interests were not properly represented in the witness-chair? In the list of bodies who made representations we observe the National Union of Teachers. Where was the Federal Council of Secondary School Associations?

Report of the Commission on the Civil Service. THERE are two recommendations in the Report of the Royal Commission on the Civil Service which are of importance to contemporary youth. The first is that the "Temporary Boy Clerk" shall be abolished. The existence of this young gentleman has long been a blot upon the Government, considered as an employer of labour. He enters the Civil Service at fifteen, is put to do purely mechanical work, and unless he is sufficiently able to get into the Second Division or gain an assistant clerkship, a success achieved by only one in three, he passes out again at eighteen. He has learnt nothing, not even typewriting, unless he has practised it for himself out of office hours, and he is thrown out on an overstocked clerical labour market, endowed with no form of skill. The system constitutes one of the worst of the "blind-alley" occupations. The Commission wish to see it perish utterly. They recommend that a Junior Clerical class be substituted, the members of which will be at once placed permanently on the establishment, other arrangements being made for some of the purely mechanical work.

The Second Recommendation. THE recommendation which touches the schools most nearly is the proposal for a change in the ages of admission to the Service which will bring the examinations into line with the educational system of the country. The Junior Clerical Class, it is suggested, should be recruited from boys of sixteen, the age at which intermediate secondary education, as the Commissioners call it, ceases, or, to put it more accurately, the age at which it is desirable that it should cease. Admission to the Senior Clerical Class, the proposed substitute for the Second Division, should be open to youths of eighteen, the age limit of a complete secondary education. Amidst the thorns of the examination question the Commissioners tread gingerly. Of the examination system as a whole they heartily approve. But they have something to say for the addition of a *viva voce* test, and they recommend that an inquiry be made into the allegation that the scheme of examination for the First Division of the Service unduly favours the curricula of the older Universities. By all means; only the inquiry must embrace also the question whether these curricula do or do not furnish the best liberal education and the education which produces the most capable Civil Servant.

THE scales of salaries suggested by the Commissioners throw out once more into high relief not merely the inadequacy of the salaries paid in secondary schools, but also the viciousness of the lack of any system of increment. Let us compare the financial career of a member of the proposed Senior Clerical Class with that of an assistant master in an average secondary school. The former will begin to earn money at eighteen, with nothing behind him but a school education. He begins, it is true, with only £85 a year, but when he is forty he will receive £290. To secure this he need make no special exertion; he has simply to do his daily round and keep the Ten Commandments. If at forty he can pass an "efficiency bar," he will reach £350 in another four years. The assistant master begins his wage-earning career at twenty-two, after a University course, and will be exceptionally lucky if he ever earns more than £200 a year. We do not bring the emoluments of the highest class of Civil Servants into the comparison, as it may be fairly held that these correspond to the head masters of secondary schools.

ROUND about the question, which at the present moment is scarcely one of practical politics, whether the Universities should make efficiency in military duties a condition of a degree, has sprung up a correspondence on the public-school boy and his games. The Head Master of Dulwich opened it by a protest that undergraduates are too much given to the worship of athletics, and that the contagion spreads from the 'Varsity to the school. Sir Joseph Larmor retorts that the undergraduate brings the infection from the school to the 'Varsity. The President of Magdalene College supports that view, but thinks that Cambridge students at least are less absorbed in games than they appear to be and that they have really a very wide range of interests. What we feel ourselves about the matter is that our games are a most valuable part of our school life and of our whole national life, so long as they are felt merely to be games. Unfortunately, they have passed out of that stage; they are regarded by large numbers of young men, both at school and college, as the most serious elements in life. Play has ceased to be play; it has become work. It demands devotion, daily thought, intense application. Other things must be sacrificed to it. To succeed in play is to have really done something; to fail is to be disgraced. It is this spirit which must be changed. As a step in the right direction we should like to see a rigorous curtailment of public displays, the abolition of the Eton and Harrow match, and the reduction of the number of inter-school matches to one for each school. Next, the whole race of groundsmen and professionals should be swept away, and boys made to do the whole of the preparation for games themselves. That would be a useful education for them as well as healthy exercise.

MR. DENMAN'S Employment and School Attendance Bill, to which we referred in our March number, has been going steadily through Standing Committee, and there is a fair prospect of its becoming law. Its provisions are important. The keynote is the large measure of discretion given to the Local Education Authorities, who will be able to require children to attend school till they are fifteen or release them at thirteen. The cast-

iron age limit will be abolished, and it will be possible within the range indicated to retain children in the school or let them go to work, as seems best for them. Half-time will be abolished. Then the Authority may require the children exempted from school attendance to work in continuation classes. Thus more than one kind of education will be possible for boys and girls over thirteen. Street trading is not to be allowed generally for lads under seventeen or lasses under eighteen, but here again the Local Education Authority is to have discretion. A noticeable feature of the Bill is the extension of the territory over which the Educational Authorities hold sway. Education Committees will have power to regulate the hours of labour and so forth of young people under sixteen, and the Board of Education instead of the Home Office will administer the Employment of Children Act. The tendency in recent legislation to hand over to the Education Office the administration of laws affecting children has been very marked.

THE action of the London County Council, in maintaining in the case of lady doctors the principle that all women in their employment, except teachers, must resign their posts on marriage, has brought again to the front the question of the employment of married women in the public service. Certainly the inconsistency of the Council is indefensible, except on the ground that teachers are so badly paid that it is unfair to prevent both man and wife earning money. For it is probably easier to be a good mother and a doctor at the same time than to be a good mother and a teacher. The whole question is one which lends itself easily to argument by generalities, but which is in reality very complicated. Do women really hold that a mother can educate and care for her little children in a way that a mother should if she is required to be absent from them for very nearly the whole of their working day? Or will it be seriously urged that anything, even the work of the cleverest teacher trained in the newest methods, can take the place of the daily and hourly thought and devotion of the mother? The Majority Report of the Civil Service Commission is against the employment of married women in the service, and it is noticeable that the eight members, including the two ladies on the Commission, who disagree with this recommendation, do not go further than to object to a hard and fast regulation of compulsory retirement on marriage. To leave the door ajar in this way is, we think, the utmost length to which public authorities can go. Those who would have them take no notice of an employee's marriage may be asked whether they wish wifelyhood and motherhood to be regarded as being for a woman neither a profession nor a vocation, but merely a piece of by-play.

WITH Mr. Sharples' resolution at the Lowestoft Conference of Elementary Teachers on half-time and continuation schools we are in general agreement—at least, so far as the abolition of the half-time system in towns is concerned. But, before we voted that no boy should go into the fields before he was fourteen, we should have asked him for his views on the best education for the son of the village labourer. More definitely do we disagree with his suggestion that Local Authorities should have power to compel the attendance up to the age of fifteen.

Salaries.

Public Schools and Games.

Employment of Women and Marriage.

Mr. Denman's Bill.

Choosing the Line of Advance.

The extension of school life may be a good thing in itself or it may not; that point we do not propose to argue at the present moment. What we would urge is that a great many things are desirable—smaller classes, continuation schools, better salaries for teachers, and better training for teachers. We cannot expect to have them all at once, and the most urgent need is smaller classes. It is more necessary at present to improve the building than to add a story to it. We should all concentrate our efforts on reducing the classes to such a size that the children can be given a genuine education. And that will need a great deal of money.

Books in Elementary Schools.
WE are glad to note in the revised edition of the Board of Education's circular on the Teaching of Geography in Elementary Schools the stress laid on the use of books. One of the weak points of these schools is the failure to make the children in the upper classes learn from books. John Stuart Mill said that no

one had ever learnt geography and history except by reading. Without going so far as that, one may safely say that these subjects cannot be learnt without reading. Books may be used in the classroom in at least four ways: First, the teacher may read aloud books of travel and description; secondly, the children may read to themselves books supplied from libraries; thirdly, children may be taught how to use works of reference by being given questions to work up in such volumes. All these uses of books the circular notices; and, further, it rightly condemns the deadly, mind-destroying, historical and geographical manuals used as "readers" in so many schools. But we are surprised to find no reference to the plan, none the worse because it is of immemorial antiquity, of making children prepare a portion of a book and examining them on it afterwards. If this method is used intelligently children will learn as much by it as by any other, and, what is of far greater importance, they will learn how to learn for themselves. Nothing helps more to the understanding of the printed page than a cross-examination by an intelligent teacher of some prepared matter.

School Libraries.
WHILE we are on the subject of books, we may note that the Report of the Board of Education for 1912-13 devotes considerable space to the subject of libraries in secondary schools, which, generally speaking, the Inspectors find to be sadly deficient. Out of 120 schools in which investigation has been made only about one-third have tolerable accommodation for a library or a satisfactory number of books. Every school should possess two libraries—one of books of reference, the other of books for general reading. But alas! in spite of a cheap press and numberless reprints, most books of reference and many of other kinds are expensive luxuries, and schools have no money to spend on luxuries. Many head masters and mistresses never get a penny to spend on the library, some a beggarly £5 a year, a few lucky ones £10 or even £25. But boys and girls must not only have access to books, they must be encouraged and taught to use them, not as nutriment to be assimilated by a process of absorption, but as tools to work with. The Board gives some useful hints on this point. In the higher forms of a school a subject may be set for an essay which needs some examination of books. Works

of reference should actually be used in class, and teachers should certainly not be afraid of thereby showing the limitations of their own knowledge. Children do not believe that their masters and mistresses are omniscient. It might be added that occasionally the pupils of a good sixth form might be set to compare authorities on some historical question, for instance, so that they may find out how much there is which we cannot know. To learn to doubt is as necessary as to learn to believe, and far more difficult.

Examinations in English.
WE had space last month for only a brief glance at the Report of the English Association on Examinations in English, and we need make no apology for returning to the subject. Examinations vex the soul of all enthusiastic teachers, but specially the souls of teachers of literature. Well, it is to a great extent a vexation that must be borne, for no test that can be devised will discover the best effects of the teaching of literature. Examinations, whether public or arranged separately for each school, whether conducted *viva voce* or by means of paper and ink, can probe only the intellectual results of literary teaching, not the moral and spiritual. Nor can they properly test appreciation. You can find out whether a boy or girl understands an argument or has acquired certain information, but not whether he or she has been moved by a drama, felt the force of a great oration, or been lifted out of the world by a great poem. The best part of the teacher's work can never be known. He must sow in faith and be content in most cases to remain for ever ignorant whether there has been a harvest.

Deviations from Type.
LITTLE Miss Phyllis Bourke, aged ten, has suddenly become a person of importance, to whom paragraphs in the daily papers are devoted. Phyllis is a youthful actress who was cast for a part in Mr. Galsworthy's new play. A benevolent magistrate, however, refused to allow her to remain at the theatre later than ten o'clock. The hour for the curtain to rise has therefore been altered, and London must dine earlier than it likes in order that Phyllis may get a proper allowance of sleep. The case brings up again the question of the employment of children on the stage. Such employment must, no doubt, be watched, and the children safeguarded by regulation, but it would be a great mistake to prevent it or harass it out of existence. It is a deviation from the normal type of education, and, in a world which is more and more regulated by Government Departments, any deviation from the normal which is not clearly mischievous ought to be cherished. Every child must be educated, but all children need not be forced through the same mill or turned out to the same pattern. Artistic talent knows no law, laughs at codes, and snaps its fingers at schoolmasters. It is rare enough in this country, and, when we find it, we may well give it a chance to grow in its own way.

Amendments of the Act of 1902.
THE address of Mr. W. A. Brockington on "Desirable Amendments of the Education Act, 1902," before a special meeting at the N.U.T. Conference, is well worthy of careful reading. He recommends a reduction in the number of autonomous education areas of small population and the abolition of differential rating and the 2d. rate limit for higher

education. Attention is also drawn to the difficulties surrounding the appointment of teachers under the dual system of provided and non-provided elementary schools. As to the distribution of State grants, he asks for a system which will give not only to those who have spent well, but to those who have spent wisely and well. "The grant should be based on the number of children in each area, but it should be adjusted to the rateable value of the area, and it should be a Block grant."

THE Head Mistresses' Association have adopted some very sensible recommendations in regard to the status of senior assistant mistress in mixed secondary schools with head masters. Without discussing the whole question of co-education, we may admit that the arguments contained in the preliminary statement carry conviction as to the need for reform. In the schools referred to, the number of which is tending to increase, it is recommended that the senior assistant mistress should be a woman of full academic and professional qualifications, and should be given a defined status and responsibilities and a corresponding salary. She should share in the teaching of the higher forms, and have sufficient spare time for personal communications with the girls of the school and their parents. We are interested to note that women teachers appear to agree generally that girls should be allowed to work more slowly than boys, and should therefore take corresponding examinations at a somewhat higher age.

THE deputation to the President of the Board of Education, to urge the grant of a charter for an East Midlands University at Nottingham, received a sympathetic hearing. Mr. Pease does not believe we have enough Universities, but he pointed out that the way charters for new Universities have been obtained in recent years has been through the evidence of enthusiasm shown by generous benefactions from local people. He cited the case of Reading, which in this way is justifying its claim for a University charter. Larger State grants would, he hoped, soon be available for London in particular, and for other Universities. Meanwhile he urged the Duke of Portland and the other members of the deputation to secure local support for their proposals.

TWO new claimants for special commemorations in schools have appeared, in addition to Empire Day. These are May 1, consecrated by the workers of the world for demonstration purposes, and May 18, "Peace Day," celebrating the first sitting of the Hague Conference. The School Peace League wish this day to be used for instilling in school children elementary ideas of what Lord Haldane has called "higher nationality." Lord Hill, at the London Education Committee meeting at which the representations of the Peace League were discussed, thought that the idea of combining Empire Day and Peace Day was worth considering. We presume that head teachers would take their choice whether to emphasize the military or the pacific aspects of our Imperial responsibilities.

A QUESTION which has arisen at Birmingham is of more than local interest. It is whether the parents of elementary school children competing for free places

How to keep Free-placers.

in secondary schools should be required to accept an obligation to allow their children to remain at school for four years, before the child competes or after he is declared to have qualified. Opinion on the question was fairly evenly divided, but in the result it was decided to approach the parents after the success of the child, the idea being that the parent would be at that time more readily disposed to make the necessary sacrifice. There is in Birmingham a very laudable ambition to make the free-place system effective for securing secondary education for poor children. The numbers qualifying for the privilege from various schools show that under present conditions many children of ability pass through the net.

IN the *Nineteenth Century* for April Prof. Marcus Hartog returns to the question of scholarships. He is against the imposition of any property disqualification, mainly on the ground that the income of a parent is no test of his ability to send his son to the University, and also on the rather specious plea that a student who cannot live in ease and comfort is handicapped and prevented in running the race. His main plea is for the foundation of funds, either by public endowment or private benefaction, to be placed in the hands of heads of colleges whereby the incomes of deserving students might be supplemented. These "Thoughts on Scholarships" are somewhat rambling and inconclusive, and before criticizing we must wait for the Report of the B.A. Committee appointed in 1912, of which Prof. Hartog is Secretary.

THE sinister legend which makes the apple the forbidden fruit,

Whose mortal taste
Brought death into the world
And all our woe,

has never sensibly affected its popularity as an article of food. It is well that it has been so, for we owe more to the apple than we think. Dr. Sims Wallace declares that the eating of apples is an excellent thing for the teeth: they leave the mouth physiologically clean. So, if the apple has helped to wreck our souls, it has at least done something to save our teeth. Dr. Wallace advocates a diet of brown bread and fresh fruit for children as a preservative against dental decay. He holds the appalling opinion that there are twenty-one millions of teeth in this country ruined by sweets! Viewed as a proportion, however, the number of decaying teeth gives a milder shock. About 10 per cent. of the children who enter the London elementary schools have really bad teeth. Poverty here has its compensations; the poorest children are not dentally the worst off; the coarse food that they get is supposed to strengthen their molars.

Children's Teeth.

TECHNICAL EDUCATION.—Mr. Len. Godfrey has been appointed instructor of the Mess-room Classes held among the workmen engaged in erecting houses for the co-partnership societies that are developing the Hampstead Garden Suburb. He gained much experience at the London Polytechnic, and subsequently on the Hampstead Garden Suburb saw opportunities of encouraging the men actually engaged in building to methods of scientific precision in place of the old rule of thumb. Last winter the Co-partnership Tenants Housing Council paid the fees of over two hundred workmen attending classes at the evening classes near their federated estates, and the institution of Mess-room Classes will keep up the interest till the next session.

LOCAL AUTHORITIES.

The Departmental Committee. If the recommendations of the Departmental Committee on Imperial and Local Taxation, in so far as they affect education, are adopted, it will not impose a serious additional burden upon the Exchequer, and it will give some much needed relief to Local Authorities. The net increase of Government subventions in respect of elementary education is estimated to amount to something over £2,250,000, and the basis upon which it is recommended the grants for elementary education should be calculated appears to be equitable. Consideration will be given not only the number of children in average attendance, but also to the total expenditure and the special circumstances of areas with a large number of small schools. Of more importance still, perhaps, is the proposal to abolish "special areas of charge for elementary education." This will render comparatively easy many needed alterations and improvements in school accommodation which are now difficult, if not impracticable. As regards higher education, there is no additional subsidy contemplated, although it is suggested that the residue grant should be replaced by a grant of approximately equal amount, to be distributed in proportion to the net expenditure of the Local Authorities concerned.

Assistance where needed. THE effect of the recommendations, if carried out, will be that a county such as Herefordshire, where the produce of a penny rate is fairly high and the expenditure relatively low, will obtain little or no advantage. On the other hand, an area such as Durham, where a penny rate yields only 2s. 1d. per child and the expenditure is heavy, will obtain substantial relief. Moreover, the general principle will be recognized that as expenditure increases the Government contribution will increase—at any rate, to the extent of 40 per cent.

London Junior Scholars. IN his valuable report on the examinations held for the award of Junior County Scholarships in London, the Chief Examiner states that the results generally confirm the view which he expressed last year to the effect that "a written test is not unsuited to these young children." The twenty thousand candidates are selected from about seventy thousand children between the ages of ten and eleven years, and the questions are designed to discover ability beyond the average. It is quite possible, therefore, for children to be well taught and yet obtain low marks "if their innate intelligence is below the average." It is pointed out that of the 20,000 candidates 3,900 boys and 2,463 girls obtained more than half marks. As the question papers indicate, this level of attainment means that the children were able, without assistance, to solve a series of problems in arithmetic and to satisfy a searching test in English. In this competition no scholarship can be won by the mere reproduction of memorized knowledge. The scholarship winners have shown themselves to be capable as well as well trained.

Arithmetic and English. THE Report is extremely interesting, and indicates the care and thoroughness with which this important process of selection is conducted. "It is somewhat the fashion," says the Chief Examiner, "to depreciate the 'finicking' accomplishments of reading, writing, and arithmetic. Rather should these arts be regarded as instruments of civilization. When a large proportion of the population can use these instruments the nation is recognized as a civilized one. The general impression which I have formed from this examination is that the children of London are trained to use these instruments, and that at the same time there is increasing recognition that this work is subsidiary to the development of the moral and intellectual powers. Unless I am mistaken, the next generation will recognize its debt to the growing intellectual endeavour in the primary schools of to-day." Some entertaining examples are recorded of the child's unconscious humour. One of the questions was concerned with London's water supply, and a list is given of 87 variant spellings of "reservoir," which merits the attention of phoneticians and advocates of reformed spelling. Most of the renderings indicate that the children have had their ear for the spoken word well trained. But there are exceptions. A boy wrote: "These pipes lead to what we call a viceroy; this viceroy is filled with water." The water was frequently stored in a "system" and released by a "tape." The following quotations, it is suggested, are significant of the unpopularity of water in too many of the poorer homes. "Some of us drink it"; "Water has a lot to do with drinks,

and teetotalers have very little to drink"; "When people have no money to have a drink they go to the tap and have a drop of water."

Durham. AT the last meeting of the Durham County Education Committee it was agreed that for the future, in connexion with the secondary schools maintained by the County Council, there shall be no compulsory external examinations of any form the average age of which is under sixteen years. This decision will affect the previous regulations applicable to present and future holders of County Junior Scholarships, no one of whom will be required to pass any University Local Examination before reaching the age of sixteen years unless the head master or head mistress of the school should desire it.

Somerset Senior Scholars. THE Somerset Education Committee has prepared an interesting, and reassuring, return concerning the subsequent careers of holders of Senior County Scholarships. Twenty-five of the thirty scholars, it appears, were enabled by means of the Committee's system of scholarships to pass from a public elementary school to a University or a University college. As a whole, the return is very gratifying—a result which is due, in part at least, it is suggested, to the Committee's policy of awarding scholarships of any grade only when candidates of really satisfactory merit present themselves. The particulars given of the distinctions gained by the scholars and their present occupations indicate that the policy of the Committee has been abundantly justified. The Committee is entitled to record with pride the brilliant achievements of one of its scholars, who is now the Director of Cambridge Observatory.

Stoke-on-Trent Technical School. THE new Central School of Science and Technology at Stoke-on-Trent, opened by the President of the Board of Education last month, is an admirable example of municipal enterprise which should prove of great value to the industries of the pottery district. The institution has been established jointly by the Staffordshire County Council and the Borough Council of Stoke-on-Trent, and is estimated to cost about £30,000. One of the objects of the school will be to undertake the work of research into the nature, constitution, and properties of different clays and related minerals, and also into the possibilities of obtaining a leadless glaze. The results of such investigations will be of more than local interest. It is gratifying to note that the manufacturers in the district have manifested their active interest in the new school by contributing a sum of £1,500 towards the efficient equipment of the pottery department, while the colliery owners have subscribed a like sum towards the mining section.

Glasgow. MEMBERS of County Councils are beginning to feel that, if they are placed upon the Education Committee, they have little time to devote to other departments of local administration. They are probably right, and this fact is perhaps the strongest argument of those who desire the election of education authorities *ad hoc*. The report of the School Board of Glasgow (which, of course, is elected for the special purpose) indicates the amount of work imposed upon a zealous Authority. In addition to the Board, there are eleven standing committees and two special committees, each with their clerk. The Board is also represented on some twenty-six bodies concerned with educational work in the city. An interesting table shows the annual cost per scholar since 1878. In twenty years the cost has increased from £2. 5s. 9d. to £4. 14s. 1d.; the charge for teachers' salaries having gone up in that period from £1. 10s. 3d. to £3. 10s. 7½d. These figures do not include payments in respect of loans or the cost of administration.

Continuation Classes. IN connexion with the compulsory attendance at continuation classes it is stated that an increasing number of pupils prolong attendance at the day school, beyond the date at which they are entitled to leave, in order that they may reach the standard of attainment necessary to free them from compulsory attendance at continuation classes. There is now evidence that many young persons who would otherwise have ceased learning at a low point of attainment on leaving the day school, are profiting by the instruction given in the classes. On the other hand, there is no evidence as yet to show that pupils who have passed the period of compulsory attendance at day school, or at classes under the By-laws, have realized the importance of continuing voluntarily and without a break their education in suitable continuation classes.

A PERUSAL of the fourteenth triennial report of the Govan Parish School Board leaves the impression of efficiency and thoroughness in administration. Since the establishment of the Board thirty-four schools, accommodating 40,924 children, have been provided, and an interesting table shows the cost of each school, the increase in the amount expended per school place in recent years illustrating the change in opinion which has gradually come about as to what is necessary for the benefit of the children. The teaching staff consists of 308 men and 568 women. Of the former, 140 are University graduates, while a considerable number have nearly completed their course of study for a degree. The expenditure on teachers' salaries is steadily growing, chiefly on account of the more liberal scale upon which they are paid. The remuneration appears to compare very favourably with the rates paid on this side of the Border. Head masters of schools under 1,000 receive from £250 to £370; over 1,000, £250 to £420. Second masters in secondary and intermediate schools and in supplementary centres, £120 to £280; second masters in elementary schools £120 to £260; certificated assistants, £95 to £180. Women certificated assistants rise from £70 to £130, and qualified teachers in secondary departments to £160. During the past ten years the amount expended on teachers' salaries has increased from £63,785 to £112,489. During the same period the number of pupils on the roll increased by about four thousand.

TWENTY years ago, on an assessable "rental" of £729,198, the school rate was 9d. in the £1; ten years ago it was 1s. 0½d.; last year, with an assessable rental estimated at £1,297,997, it was 1s. 9½d. The amount per scholar paid for teachers' salaries is now £3. 12s. 11½d.—something more than Glasgow—and the total cost per scholar £4. 11s. 3½d. The Board have not taken advantage of the power conferred upon them by the Act of 1908 to frame by-laws for compulsory attendance at continuation classes for young people under seventeen whose standard of education is not otherwise satisfactory, but they make it a condition of exemption from day-school attendance before the age of fourteen that all scholars so exempted shall attend continuation classes until they reach the age of sixteen. The Board have also appointed a special officer whose duty consists in visiting all scholars leaving the day schools, and advising them as to the classes they should join. Of the pupils in the parish who left school, and whose employment did not preclude their attendance at continuation classes, 57 per cent. were enrolled.

SCIENCE NOTES.

AMONG recent Parliamentary papers are "The Estimates for Education, Science, and Art." After the appeal made by Sir Archibald Geikie for increased financial support of the Royal Society, an appeal based on the direct value to the Government of the work done by the Society, it is instructive to note that the proposed grants for 1914-15 represent a net decrease of £11 on the amount voted last year. They include the grants for the Aeronautical Section of the National Physical Laboratory; otherwise the decrease would be £3,411. The only possible explanation of the meagre encouragement given to research can be found in pure ignorance of scientific work on the part of all but a feeble minority in the House of Commons.

THIS ignorance of scientific work on the part of our rulers is a national weakness, and we are constrained to ask what efforts are being made by teachers, head masters as well as science masters, to combat the evil. It is notorious that in some of our greatest public schools the science work is hopelessly starved—not in money, but as regards the allowance of boys' time. Some head masters admit that more should be done, but science is not popular with the parents! So far as the class from which most M.P.'s are drawn is concerned, we are in a vicious circle. We wish the Association of Public School Science Masters would institute an inquiry into the provision of opportunities for science work in the case of boys who are *not* competing for science scholarships or required to take chemistry or physics for Army entrance. How many fail to get the two years' scientific training regarded as a minimum by the Public Schools Commissioners?

MR. T. M. P. HUGHES has hit upon an extraordinarily simple device for approximating to within one part in four million in the quadrature of the circle. Draw a right-angled triangle with the shorter sides in the ratio 23 to 44. Apart from errors in drawing, the area of the circle circumscribing the triangle will be equal to the square on the 23 side to the astonishing degree of accuracy already mentioned. It may interest a class to make a 23 : 24 set-square and apply it.

AT the last Annual Meeting of the Public Schools Science Masters' Association the members present were greatly interested in a gyroscope mono-rail car exhibited by its inventor, M. Pierre Schilowsky. His Excellency has generously presented a working model to the South Kensington Science Museum, so that anyone can now inspect every detail—a privilege which few inventors permit to the public. Sir George Greenhill is one of the believers in the future importance of the gyroscope, and we are glad to hear that the South Kensington authorities are enlarging the number and range of their models.

VIEWED under a low power of the microscope with dark-ground illumination, *Spongilla lacustris* is an object of beauty. To those responsible for the care of the Cardiff Waterworks this sponge has appeared in a less favourable light. To prevent the blocking of pipes and chambers in connexion with the filter-beds, resort was had to strong brine, with successful results, from the engineer's point of view.

DURING May Mars will be advancing through Cancer, being in Praesepe on the 13th, when the planet and the famous naked-eye cluster will afford a glorious view through a low power with a small telescope, given such fine evenings as have prevailed during the latter half of April. On the 20th, shortly after 5 o'clock in the afternoon, the planet will be occulted by the Moon, and there should be no difficulty in observing this in clear weather, despite the daylight. Unfortunately, although the altitude is good, Mars is receding at a rate which is rapidly reducing the size of the disk.

SCHOOL CONDITIONS IN THE SIXTEENTH CENTURY.

MR. ARTHUR F. LEACH has edited a Collection of Documents illustrating the course of educational progress in the city of Worcester.* Another name associated with the volume is that of one of the most distinguished of living ex-Head Masters, the Rev. Canon J. M. Wilson, who is the present Librarian of Worcester Cathedral, and in that office has readily brought his educational enthusiasm to bear, in the collection and investigation of the educational documents, and references bearing on schools and other institutional aspects of education, to be found within the Cathedral or elsewhere in Worcester. The volume, therefore, may be safely regarded as comprehensive. It is certainly of high interest. For Mr. Leach, in his substantial introduction, has made the publication of the Collection of Documents not only the occasion for an inclusive sketch of the different types of education prevalent in Worcester, but also for an illuminative discourse on many topics of educational progress in England, of especial value in the pre-Reformation periods, which are, of course, the very times of which we know the least. We get an insight into the connexions established by the Worcester Priory with the University of Oxford, and rarely has there been provided so complete an account of the financial arrangements of the scholar-monks sent from a provincial centre to the Univer-

* "Documents illustrating Early Education in Worcester, 685 A.D. to 1700 A.D." Printed, for the Worcestershire Historical Society, by Mitchell, Hughes, & Clarke, London, W. (1p. xc, 341, 4to.)

sity each year, and Mr. Leach has given further details drawn from his rich stores of knowledge to illustrate this, as well as other of the early educational activities of Worcester. He draws our attention to the establishment of a public library and public lectures in the city in pre-Reformation days. In the more specifically school history he tells us, with graphic touches, the origin of the Feast of St. Nicholas, and the ceremony of boy-bishops, and shows us the significance of disputes between the schoolmaster and a parish rector over the remains of the wax candles used in the celebration. He gives details of the old custom of cock-fighting in connexion with schools, and, as far as Worcester is concerned, shows us when Declamation Days and the giving of prizes first began. He makes clear to us the different types of education obtaining in a city in the Middle Ages, and in this volume he gives as complete an account as we have seen of an old almonry school of a monastery and its evolution—into a song school.

But most important of all the topics discussed in the Introduction, guaranteed in full by the reproduction of the original documents, is the account of the two schools in Worcester, the Cathedral Grammar School and the Town Guild School. From the title of the volume the reader might be led to expect that the old Grammar School could be traced back to 685 A.D. In his heart of hearts, no doubt, Mr. Leach believes he has done this, for he gives reasons for dating back the bishopric of Worcester to 685 A.D., and by an easy inference claims: "As the erection of a bishop's see carried with it the erection of a school, *we may therefore date the school from 685 A.D.*"

But for this early date there is no direct evidence. As Mr. Leach himself informs us, "The first definite document dealing with Worcester Grammar School is connected with the year 1291 A.D." The documents reproduced by Mr. Leach, however, establish the continuity of the school for the last six centuries or more. The second Worcester school—what may be called, in contradistinction to the Cathedral School, the Town School—was founded in connexion with "The Guilde or Fraternitie of the Holly Trinitie within the parishe of Saint Nicolas." The Holy Trinity Guild was "established and confirmed by letters patent from King Henry IV," but the exact date of the foundation of the school by the Guild is unknown. It is clear, however, that it was long before the time of the Reformation, for in the certificate of King Edward VI's Commissioners in 1548 it is stated that a school had existed "tyme out of mynde," and, further, that it had been "kept in a grate hall" belonging to the Trinity Guild. We see, therefore, that medieval Worcester possessed two schools, the Cathedral Grammar School and the Town Guild Free School. In other words, the one was a secondary school and the other an elementary school.

Coming to the sixteenth century, Mr. Leach is able to supply full details as to the scope and aim of each of these schools, and in the case of the Grammar School to supply an account of the curriculum in full. To take the Town Guild School first. This was known as the Free School, and traces its history continuously up to the present time. It is, however, now known as the Royal Grammar School, in distinction to the Cathedral Grammar School, now named the King's School.

It was in 1561 that the Free School was refounded by letters-patent issued by Queen Elizabeth, under the advice of Lord Burleigh, at the request of the inhabitants of Worcester. The object of the institution was stated: "That from henceforth for ever it be and shall be, one School for A B C and grammar, for the teaching, erudition, and instruction of children, to teach and instruct them to read and otherwise, in good learning and manners to be taught and brought up as of old time it hath been used in the said city, which shall be called and named the Free School of the City of Worcester, for education, erudition, and instruction of children." In 1547 this school had over a hundred pupils.

Such a statement clearly differentiated the "Free School" from the Cathedral Grammar School. Worcester was particularly fortunate in having very full regulations for the Cathedral School supplied in the Statutes for the refoundation

of the Cathedral Church by King Henry VIII in 1544. For, though statutes were drawn up and sent to all the Cathedrals, yet, as Mr. Leach points out, Worcester was unique in the fullness of the articles referring to the conduct of the Cathedral School. In the words of one of the statutes:

That piety and good letters may in our Church aforesaid for ever blossom, grow, flower, and in their time bear fruit for the glory of God and the advantage and adornment of the commonwealth, we decree and ordain that there shall always be in our Church of Worcester . . . maintained out of the possessions of the Church forty boys, poor and destitute of the help of their friends, of native genius as far as may be, and apt to learn.

Mr. Leach points out that, though there is the limit of forty to be Foundationers, there is no limit placed on the number of paying pupils. The conditions of entrance were "reading, writing, and the first rudiments of grammar." School education was to continue for four years, in which was to be expected that the boys would attain "a moderate knowledge of Latin, and *have learned to speak and to write Latin.*" The age of admission was limited to those who had completed the ninth year and had not passed the fifteenth year of age. Slow and stupid boys, and boys to whom learning is "abhorrent," are to be expelled, and others substituted, "lest a boy like a drone should devour the bees' honey." The head master was to be "learned in Latin and Greek, of good character and pious life, *endowed with the faculty of teaching.*" The same requirements were to be made of the usher, excepting that the qualification in Greek is not named. If any master proves "idle, negligent, or unfit to teach, after three warnings," he is to be dismissed by the Dean and Chapter.

It is especially noteworthy that the staff and pupils are constituent members of the cathedral organization. The head master is to receive annually £15. 2s., the usher £6. 5s. 10d., and each boy 1s. 8d. annually, whilst minor canons of the cathedral received £10, and the deacon and the sub-deacon £8. Moreover, for all of these a common table was to be provided at the cost of the Foundation, though this provision did not come into operation. All of them, masters and boys, as well as the minor canons, received grants for cloth to provide themselves with proper liveries, &c. The Dean was responsible for the delivery of everyone's share of cloth, and it was required that this should be done in sufficient time before Christmas so that all "may celebrate the birthday of our Lord Jesus Christ with new clothes and new minds." The head master of the school, as Mr. Leach remarks, occupied a position after the Canons, but before the Vicars Choral or minor Canons. The usher was next below the minor Canons. Further, the masters could, and did, hold sometimes simultaneously livings and minor canonries, and were able to levy tuition fees from non-foundationers.

The following is a summary of the curriculum laid down by statute:—

There is the arrangement into six Forms of which the Master takes the three higher, and the Usher the three lower. The conditions of entrance are defined—viz., to read readily, to know by heart (in the vernacular) the Lord's Prayer, the Ave Maria, the Apostles' Creed, and the Ten Commandments. Those who do not know any Latin grammar are to be placed in a preparatory class, where they will learn the accidence of nouns and verbs.

Form I.—To learn by heart the rudiments or grammar in English. It will be remembered that the Latin Grammar of Dean Colet and the earliest form of Lily's Grammar were in English. It was only later in the sixteenth century that Lily's Grammar (in Latin only) became the sole textbook. The boys in the first form were to learn to put together the parts of speech, to turn short phrases of English into Latin, and other easy constructions.

Form II.—To know the genders of nouns and the inflections of verbs in Latin. To study Cato's verses, "De Moribus," Aesop's Fables, and some familiar colloquies (of these, Erasmus, Vives, and Mosellanus had provided well known textbooks)

Form III.—To duly decline nouns and conjugate anomalous verbs, so that they are perfect in all changes in nouns and verbs. These boys are to be thoroughly familiar with Terence's Plays, with the Eclogues of Joannes Baptista Spagnuoli, the Mantuan (often called the second Virgil, and even sometimes considered by his eulogists to be a greater poet than the author of the Aeneid).

The above classes were to be under the usher, who was to enter the school at 6 a.m., and, after saying the prescribed prayers, to practise his scholars in the accidence, and daily to dictate English sentences for exact translation, and careful writing in their parchment note-books.

Form IV.—Latin syntax. To be practised in the writings of poets and familiar letters of the learned (*doctorum*). Evidently neo-Latin authors, therefore, were studied to some extent.

Form V.—To be instructed in the figures and canons of making orations (as, for instance, in the scheme of Mosellanus) and the rules for making verses. To be practised in making verses and elaborating themes. Then to work at translating the finest poets and the best historians.

Form VI.—To study the formulæ of the "De Copia Verborum et Rerum" of Erasmus. To learn all variations of speech in every mood, so as to speak Latin with such facility as is possible for boys. They are also to cultivate a taste in reading Horace, Cicero, and other authors. At the same stage they are to compete with one another in declamations, so that they may develop good powers in argument before leaving school. Every other day, throughout these classes, English is to be translated into Latin, and changed into as many different renderings in Latin as possible.

The head master is weekly to examine every class throughout the school, once, twice, and three times. "If, after testing them in every way, he shall find any to be slow and wholly strangers to the Muses, he shall warn their friends faithfully not to let them continue them in their studies, wasting their time in vain, and shall then fill their places with other boys. Industrious boys, on the other hand, are to be promoted at least three times a year, after consultation with and in the presence of the usher in those classes under the charge of the latter. The hour of coming to school for boys and the usher was 6 a.m. (For the head master the relaxation was allowed of appearing at 7 a.m.) The end of the afternoon session was 5 p.m. But the boys were to return from 6 to 7 p.m. for repetition and saying lessons to older boys more forward in learning what has been learned in the day (masters being also present).

Throughout there is insistence on the speaking of Latin. Even in the lower, as well as the higher, forms, usher and master shall endeavour to teach their pupils to speak openly, eloquently, and distinctly in Latin, "keeping due decorum both with their body and their mouth." Whether in the school or out of it, in class or in the playground, "they shall never use any language but Latin or Greek." The period of four years is the specifically assigned course for the accomplishment of this, and it is clear that the method of teaching was intensive. There is no mention of the teaching of any modern language, of any mathematics, nor, of course, of any science; but the method of Latin-teaching, which involved spoken Latin as well as written Latin, at least provided the educational discipline which we now look for in the teaching of a modern language. For at least it was intended that exact pronunciation and careful elocution were to be developed. But even for this intensive culture and accompanying neglect of other subjects four years seems a small allowance of time. Perhaps it should be pointed out that the school hours each day were half as long again as at present, which would for the modern equivalent number, spread over six years. But, take it as we will, if results were in any degree comparable with the requirements of the statutes, there is room for amazement at what was expected in a four years' secondary school course. Nor was the idea of connexion with the Universities a slight provision. From the Cathedral funds twelve Exhibitions were to be maintained at the University. There was thus a complete "ladder" from the town guild school to the Cathedral grammar school, and by these Exhibitions to the University, and we know how strenuously Archbishop Cranmer supported the plea for choosing poor men's children to be Foundationers. Mr. Leach quotes the well-known passage:—"Poor men's children are many times endued with more singular gifts of nature, which are also the gifts of God, as with eloquence, memory, apt pronunciation, sobriety, and so on, and also are more commonly apt to apply their study than is the gentleman's son, delicately educated."

JOTTINGS.

THE School of Russian Studies in the University of Liverpool has been in existence for seven years. The object of the School is to foster good relations between England and Russia in every possible way. The staff of the School consists of a Professor of Russian History, a Lecturer of Russian Language and Literature, and three Research Fellows. The members of the School include Sir Donald Mackenzie Wallace, Sir Charles Eliot, and all other eminent Englishmen who are interested in Russian affairs. The School has also two travelling students in Russia, a great number of translators, and a library of over four thousand volumes. It has an information bureau for English students wishing to take up teaching work in Russia. It also publishes a quarterly journal called the *Russian Review*, edited by Prof. Bernard Pares, the Hon. Maurice Baring, and Dr. Harold Williams, to which articles are contributed by the leading politicians and scientists of Russia and the chief authorities of Russia in England.

A DELIGHTFUL collection of Latin songs—ancient, mediæval, and modern—with music attached to each, has been published by G. P. Putnam's Sons (New York and London.) The editor is Prof. Calvin S. Brown. The volume contains ancient lyrics from Catullus and Horace; mediæval church hymns, such as *Dies Irae*, *Stabat Mater*, and *Veni, Creator Spiritus*; and the old Christmas Carols "*Caput Apri defero*," and "*In dulci Jubilo*." There are also such convivial songs as "*Gaudeamus igitur*," "*Lauriger Horatius*," and "*Mihi est propositum*"; folk-songs of the type of "*O Sanctissima*"; and lullabies like "*Dormi, Jesu!*" The Latin songs of the English schools and colleges are also given. The book contains, too, several renderings into Latin of popular English and German songs. Among the former are "*Rock of Ages*," "*God save the King*," "*The Psalm of Life*," and several nursery and nonsense rimes; among others, are Latin versions of "*Tannenbaum*," "*Die Lorelei*," and "*Die Wacht am Rhein*."

THE Froebel Society will again hold a Summer School for Teachers of Young Children at Broadstairs from August 1 to 22. Among the attractions of this year is a Practice Class in Eurhythmics conducted by Miss Findlay, a trained Hellerau Student. Inquiries should be addressed to Miss James, 7 Norfolk Mansions, Battersea Park, S.W.

THE Association for the Teachers' Study of the Bible, of which Mrs. Bryant is President, has already arranged several admirable courses. We would call attention to the latest, at St. Margaret's Church, Westminster, particulars of which will be found in our advertisement column.

AN official visit of teachers from Canada and Newfoundland to the mother country has been arranged by "Hands across the Seas" for next July and August. Visits to Oxford, Stratford-on-Avon, Edinburgh, and other places of interest have been arranged, and the entire cost of the tour (on the special steamers first and second classes will be thrown into one) will be well under £50.

THE REV. W. J. BARTON has been appointed to the Head Mastership of Epsom College in succession to the Rev. T. N. H. Smith-Pearse, who retires after twenty-five years of service. Mr. Barton has for the last seven years been an Assistant Master at Winchester College. He took a First in Classical Moderations and Greats, and holds the Oxford Diploma in Geography, with distinction in two branches.

BLUE BOOKS are proverbially dull reading, but the Board of Education Report for 1912-13 is enlivened by an historical survey of the training of elementary teachers from the beginning of the last century, which includes vivid recollections of college days by old students alive and dead. The general impression left is of a barrack-like life—Spartan but not unwholesome fare, dull lectures by teachers mostly incompetent, and no provision for social life or games. The wonder is that so many students survived the ordeal and retained a lingering affection for their old college. Nowhere has progress been more marked than in the comparative luxury and *Lernfreiheit* of the modern hostel.

THE alarming decrease in the number of intending teachers is frankly recognized. In 1906-7 there were 10,340 Pupil Teachers

and Bursars; for the past year there were 4,486. The main causes, too, for this deficiency are clearly pointed out, and the longer preparation required of the teacher, and the fact that he has to a very small extent shared in the general rise in wages and salaries. As Mr. Steer pointed out in his presidential address at Lowestoft, the average salary of the Certificated Teacher is for men £146 and for women £101. But the proposed remedies of the Board seem to us mere palliatives that may at most raise the entries by 5 or possibly 10 per cent. Then £10,000 is to be allotted to aid the initial cost of introducing maintenance allowances for Bursars. The scale of salaries proposed by the N.U.T. appears to us moderate and reasonable; but Mr. Pease stands aghast at it, and reckons that it would cost the country six and a quarter millions. A larger sum was found for National Insurance.

A FEW other items of interest may be gleaned from the Report. The number of secondary schools recognized as efficient is 1,008. Of these 896 are on the Grant List, and of the remaining 110, 39 were private schools. The full 25 per cent. of free places was not exacted in the case of 119 schools, and 58 of these were required to offer only 10 per cent. Five schools are in receipt of grants for educational experiments. The absurd practice of allotting grants to secondary training colleges by groups of five has been abandoned, but the amount has been reduced by £2 per unit. No school has yet applied for the grant offered for apprenticeship or student teachers, and under the present conditions we do not think that the Board will be burdened with applications.

AN important Conference on Further Education is being organized by the Teachers' Guild of Great Britain and Ireland, the Workers' Educational Association, and the Letchworth 1914 Celebration Committee. The present position and future development of Further Education in England, Germany, and America will be dealt with by experts. There will also be sessions dealing with non-vocational work; vocational work, including agricultural, domestic subjects; civics, and the training of teachers for the work of Further Education. There will be various Exhibitions of School Work, excursions, and a performance of "The Tempest" by the Letchworth Amateur Dramatic Society. Educational Associations are being invited to send Delegates to the Conference (fee 5s.). Information regarding the Conference may be obtained from the General Secretary, the Teachers' Guild, 74, Gower Street, London, W.C.

THE USE OF STATISTICS AND GRAPHS IN THE TEACHING OF GEOGRAPHY.

By M. C. MARCH, M.Sc.

THERE is no doubt but that the revolt against the old method of teaching geography by rote led, with the swing of the pendulum, to the development of a method which resulted in a vagueness of knowledge. For instance a child might quite well be able to give an account of the vegetation of the temperate zone, but, asked to compare the agricultural productions of Russia and France, he would be at a loss. This is, of course, far better than knowing the test of such productions for any country, but it would be better still if the child, knowing the productions of the temperate zone, should be able to say where those productions attain such importance as to form a considerable part of the revenue of the different States. For it should never be forgotten that, though the world is divided regionally from the geographic standpoint, yet practically the divisions are political.

Statistics.

This can be done partly by descriptions of the countries and the lives of the inhabitants. But this method can only be used for young children at later stages; it is too lacking

in definiteness to be useful. Later the knowledge can be acquired by the judicious use of statistics. For example, say, in taking the wheat production of the world, the main sources of supply can be given, with the amounts produced in million bushels. The numbers are probably valueless to the children as such, partly because they are so large and partly because it is difficult to visualize bushels. They can, however, be made of value by getting the children to represent the numbers graphically. This graphic representation not only reduces the unrealizable figures to dimensions within the mental grasp of the children, but also trains them in accuracy in measurement and in neatness.

The fact that statistics so handled are of use is shown by the children's questions. The following are three actual questions asked while the children were doing statistics of the world's production of the supply of foods and raw materials.

"You always hear such a lot about wheat-growing in Canada, but look where *it's* column comes. Why's that?"

"The United States has the biggest column for wheat and maize and cotton of any other country, and has a great many sheep and cattle, and lots of oats, and we have hardly any, and yet we are a very important country. How's that?"

"We get a lot of wheat from Russia. Why don't we get any from France and Germany? They grow a lot, and they're nearer."

In later stages this graphic representation of the figures is not always necessary, as the children have learnt to appraise their relative values.

By the judicious use of statistics, the children get a definite knowledge of what raises different products and in what proportion.

Graphs.

Graphs can be used also to give definiteness. This is particularly the case in the study of climates. Take, for instance, the comparison of the climates of St. John's, Newfoundland, and Edinburgh. The difference of range of temperature is much more rapidly grasped if actual temperature curves of the two places are drawn. Then the reason for the difference in the curves is at once sought for by the ordinarily intelligent child, and can be found by the child itself if it has a good atlas. Or, in studying the climates of Europe, from the point of view of rainfall, the fact that there are climatic regions can be found by the child, if rainfall curves are plotted for such places as Moscow, Edinburgh, Marseilles, Brindisi, &c. If these curves can be shown on the same diagram, their differences and similarities can be traced more readily.

In working out a monsoon climate graphs are especially useful. First the temperature curves can be plotted for such places as Irkutsk, Yakutsk, &c., with the temperature curve of Edinburgh to give a true standard of measurement. From these facts the children can deduce the effect of these temperatures on pressures and winds. Their deductions can then be verified by making them plot rainfall curves for typical places within the monsoon area. With these the rainfall curve of Edinburgh should be made for comparison.

When these facts have been really grasped, rainfall curves can be drawn for such abnormal places as Colombo, Trincomalee, and Madras. The different form of the curves from those of typical places is at once evident, and the reasons sought for and found.

That the children do appreciate the use of graphs is shown by the answers given by a form to a question asking them whether they liked doing graphs. Two children said: "I do, because they're easy and I like drawing; but they don't seem much good." The others said, in various ways: "Yes, we like them, because we can see the things; and it makes it so much easier to understand winds and things."

Besides making it easier "to understand things," these graphs, like statistics generally, if taken in moderation, do away with vagueness of conception, especially if used with graphs relating to the home district.

IDOLA LINGUARUM.

FRENCH.

By CLOUDESLEY BRERETON.

MACAULAY, in his essay on the War of the Spanish Succession, describes in a most humorous way how Lord Galway, who thought it better to fail according to rule than to succeed by innovation, drew up his troops at the Battle of Almanza according to the methods prescribed by the best writers, and in a few hours lost 12,000 men, 120 standards, all his baggage, and all his artillery. Now, this great illusion as to the all-sufficiency of hard-and-fast rules is not confined merely to the art of war, but it is to be met with in every art, including that of teaching. It is only under the stress of experience we learn that every rule has its exceptions, and one's strait-laced formulae assume the more elastic shape of principles. One recognizes, in fact, that dogma, when pushed to excess, is like the letter that killeth; but principles are living things, whose spirit must be the basis and informing element of our judgments. Not that an apprenticeship in rules and regulations is not an absolutely necessary stage in the development of the ordinary man or the average teacher. They represent in their most intelligible form the generalized and codified experience of his predecessors, be it in the art of life or in the art of teaching. In a word, they are the law, the grammar of the subject, with which only great geniuses can afford to dispense. Some people, it is true, either through temperament or lack of imagination or of insight, never get beyond this doctrinaire or conventional stage. All their lives they remain the willing slaves of some system or convention, whether the idol they worship be Mrs. Grundy, or Lindley Murray, or the fetish of compulsory Greek. But, with age and experience, every teacher worth his salt may hope to pass through this mechanical and doctrinaire stage to what I would call the artistic and creative stage, which does not reject the scientific stage, in which all seemed so neatly catalogued and classified and reduced to rule, but rather transcends or fulfils it. The teacher, in fact, serves, as it were, a probationary period under the law, a temporary bondage, if you will, in order to pass to the higher stage, which is that of perfect freedom. Such a stage is the very antithesis to anarchy or mere irresponsible whim. On the contrary, it is based on the conscious balancing of rule with rule and principle with principle, followed by a free choice. If we seem to break a rule, we do so, not out of caprice, much less out of ignorance, but with full consciousness, because in the final court of appeal we acknowledge, like Antigone in this particular case, the superior validity of some over-riding principle.

It seems therefore that it is essential for those who are followers to-day of the new method of teaching French to keep this view of things well in sight if they are to avoid the fatal error of allowing their teaching to become dull, uninspired, and mechanical. This alone can save us from a whole crop of *idola linguarum*. We must steadily bear in mind that many of our so-called rules and taboos are not sacrosanct dogmas, but only generalized forms of method, which we can transgress if we will, but *only* on condition of justifying our action, and still more our results. The first principles before us are the aims of getting the pupil to understand, to think, and to speak in the foreign language, as well as to appreciate its literature, its history, and those who speak it. Our test, therefore, for any rule, or rather for its application, depends on the question, Does it help or hinder on the whole the advent of any of these particular desiderata? When looked at from this standpoint, whether in language teaching or any other art, rules which apparently seemed so rigid and inelastic transform themselves into principles, which act as our

servants, not as our masters, as our counsellors and advisers, and not as our rulers. In a word, knowledge is transmuted into wisdom, and science becomes the handmaiden of art, or, to put it in its most general form, the technique handed down by the race is absorbed and transcended by the individual artist, whether he models his own life or that of the children of the nation, or, as in the case of the statesman, helps to shape his country's destinies.

It follows, then, that the ideal of the teacher should be to be above the law, but not outside it. Yet though in the modern language Pantheon there may be many idols, the present writer, iconoclast as he may seem to some, is not prepared to advise teachers to cease burning their incense at the usual altars unless they are proposing to renounce the idola they serve for something better. A man with a fetish is probably a better teacher than one with none at all. He at least has a working hypothesis on which to act, which, if it obscures from him certain truths, at least preserves him from palpable errors. On the other hand, some uniformity is necessary on practical grounds, and is, indeed, necessarily presupposed in theory by the possession of a common stock of principles. To take the simplest case. No matter how able a man may be, his liberty to use any particular textbook must be determined by the fact whether it fits into the general scheme of instruction drawn up by his colleagues; and the same is true of the line of attack to be followed in any particular school, since the educational unit is not the teacher's class, but the school as a whole.

So much for the spirit in which the teaching of French should be viewed. I will now pass to another besetting sin, which, though far less evident in the schools than heretofore, still dogs the steps of the teacher of truth, and, indeed, of the great majority of teachers. I allude to the insufficient attention still paid to developing and utilizing the child's activity. In the old heroic days of the reform especially the teacher, in his desire to *prêcher d'exemple*, imagined the more he held the floor and immolated himself before the form the better. Some pedagogical hierophants, in their frantic antics, irresistibly reminded one of the priests of Baal, while their audience not infrequently recalled the attitude of Elijah. Even when they succeeded in arousing appreciation in their pupils, it was what I would call a passive rather than an active appreciation—the appreciation of the connoisseur, and not of the artist. But the learning of a language is largely an art, and you might as well think of teaching people to play the piano by taking them to hear Paderewski. No doubt in the beginning the teacher must *prêcher d'exemple*, but none the less, from the very beginning, he must never let slip an opportunity of getting the class to do the work themselves so long as any member of it is capable of doing so. If one may use a rough metaphor to explain—while it is the function of the teacher to teach the pupils the game, and coach them in all its finesses, one must never forget that it is the pupils who have got to play and that they learn by playing. To put the point, then, in a paradoxical form, one would say that the ideal to bear in view is for the teacher to act as coach and umpire, and for the class to do the work.

Like all ideals, this is unattainable, but the principle is a sound one, and in language teaching particularly so, for the aim in language teaching is not merely the acquisition of knowledge, but also of power to use and express oneself in the language, and this can only be done by actual practice. Hence the desirability of getting the stronger wherever possible to correct the weaker, and of making the pupils question each other in revision work, or of allowing them to dramatize and perform the stories they read. Again, they may with advantage be divided up for competition into rival sets. This encourages the weaker members on both sides to do their best, as it makes their work count, since a small improvement on their part may decide the success of their side. Thus a corporate spirit may be produced in work, of each doing his best for his side, similar to that one finds in games, and in the spirit of the George Junior Republics. All this "team work" is in its infancy. Yet I am convinced it is one of

DIRECTOR OF STUDIES,

No. 14 Burlington House, Cambridge.

the best ways of creating a French atmosphere in the class, and of rendering the work *real* to the pupil, which is likewise a principle of prime importance. It can no longer be regarded as an *ἀγνώτος θεός* in our schools; it is still far from being held in the honour which is its due, in spite of the efforts of reformers, especially in such subjects as geography and history. I still think we have not yet fully grasped how difficult it is to make things *really real* to the average child, which is only another way of emphasizing the need of endowing them with life for him. We are still far from "getting into his skin." If what is real "sticks," then, judged by this severe test, there is still much for us to do in this matter in schools of all grades.

Again, in the teaching of French especially, I am convinced that the reality of the language can be excellently brought home to the pupils by encouraging them to read simple French books of their own accord out of school. Apart from the getting up of school plays, nothing is more likely to give the children a real feeling for the language. Of course such books should be as easy as possible, say, like the French translations of the "Books for the Bairns," and the children should not be expected to read them with an eye to puzzling out every grammatical difficulty, but for getting a liking and a feeling for the language.

Mere conversation on the text of a reader will not ensure the attainment of this sense of reality; one has, to one's amazement, come across children who could answer questions on the text—not as parrots, but knowing what they were saying—and yet had no idea of applying the same vocabulary to express their own ideas. These were extreme cases, but they show the narrow limits of utility of apparently intelligent fluency in conversation when exercised within a sort of watertight compartment. The parable of the ten talents is particularly true of the teaching of French. If the pupil is not perpetually encouraged to put his knowledge out at usury, he will keep it merely in a napkin for examination purposes.

One of the great problems of the future in education is the encouragement of originality. It seems to me the more we can get the child to work by himself and with his fellows, the more we shall train him to think and feel for himself.

On the other hand, do not let us be afraid of that bogey of modern times—learning by heart. Only let it be understood that learning by heart comes, at least in the teaching of French, after the process of learning by doing, and when that process has been gone through, I for my part am not only not averse but keen on committing the results to memory, be they words and phrases or grammatical facts, and also of adding to them other kindred phrases or grammatical information that the pupil is likely to require in the near future. The heuristic method, if practised alone, whether in science or language teaching, implies raising the school age to something approximate to the age of Methuselah. Short cuts are not only useful but essential, so long as we look after our *points de repère*.

And finally, let us take care that the ideals of one stage do not become the idols of the next, through their rank in the hierarchy of aims being insufficiently defined. Thus at the outset correct speech is the immediate aim. But none the less, phonetics is not the end-all and be-all of language teaching, but only a means to learning the language; and the language again, in its ultimate aim, is mainly ancillary to the study and appreciation of the foreign literature. Teachers should, of course, keep themselves fresh through holiday courses and home classes in accent and speech, and many of them do not fail to do so; but where I think less is done, or at least much more is possible, is in the reading of modern French literature. In this respect, the French teacher has a great pull over his classical colleagues, for modern literature, unlike classical, caters for all tastes and all interests. The tired teacher may not always be in the mood to read his Homer or his Racine, but he must be a tired modern language

(Continued on page 322.)

NEW BOOKS FOR THE NEW TERM.

The Mother Tongue Series.

THE PRACTICE OF ENGLISH.

(Being Book II of the English edition of
"THE MOTHER TONGUE.")

Edited by J. W. ADAMSON, Professor of Education in the University of London, and A. A. COCK, Lecturer in Education in King's College, London.

363 pages. Price 2s. 6d.

A sequel to the well-known Book I English edition, of "The Mother Tongue" prepared for the use of Secondary Schools, and for the senior classes of elementary schools; it is available in one volume or in three separate parts. This revision is based on Books II and III of the original work.

The new volume contains a complete course in composition and such grammar as is necessary for the more advanced practice of the mother tongue. A special feature is the adoption of the principal recommendations of the recent Report on Grammatical Terminology, published through the English Association.

The exercises in composition are also designed to serve as an introduction to literary appreciation and criticism. For the purposes of these exercises the book is well provided with examples of standard prose and poetry.

A New Algebra.

ELEMENTS OF ALGEBRA.

By G. ST. L. CARSON, M.A., M.Sc., Reader in Mathematics in the University of Liverpool, formerly Head Mathematical Master in Tonbridge School; and DAVID EUGENE SMITH, Ph.D., LL.D., Professor of Mathematics in Teachers' College, Columbia University.

Part I. Now Ready. 346 pages. Price 3s.

In placing this book on the market the publishers have every confidence that it will meet with real success. The authors, whose work is too well known to need any further comment, are both *specialists*, and their aim has been to write a book containing all the work needed in an ordinary school course not leading to any specific examination. They have tried to retain those features which have conduced to the success of textbooks in the past, at the same time incorporating such modern methods as now appear likely to stand the test of experience. Part I of the "Elements of Algebra" may therefore be described as **modern, progressive, and sane**, and as the authors have given of their best to write a book of real merit, so have the publishers endeavoured to bring it out in a form worthy of the matter.

Complete Catalogue post free on application. Books sent on approval to Teachers.

To Teachers of French.

Mr. WILLIAM HEINEMANN has just published an important new work on French Translation.

**French Translation
and Composition**

By H. J. CHAYTOR, M.A., Head Master of Plymouth College, and E. RENAULT, B.A., Lecturer in the University of Liverpool. Crown 8vo, 2s.

Under the present examination system, practice in difficult unseen translation is a necessity for candidates. This book, which is intended for Upper Forms, presents an original and effective method of teaching the subject. A number of subjects have been chosen, and each subject is represented by two or more passages from classic French writers, followed by an extract from a standard English writer on the same theme. Before attempting the translation of the English passage, the pupil studies the French pieces dealing with the same subject, and this exercise enables him to translate fluently and idiomatically. Free Composition is then set on the same themes.

WILLIAM HEINEMANN, 20 & 21 BEDFORD STREET, W.C.

A NEW "IDOLA" SERIES

IDOLA LINGUARUM

THE JOURNAL OF EDUCATION will publish during 1914

A SERIES OF ARTICLES ON LANGUAGE TEACHING

teacher indeed to whom an interesting French novel or an exciting French play does not come as an agreeable tonic. In this connexion, it may, perhaps, be worth the while of the Modern Language Association to start a circulating library of modern French fiction, and leading French publishers might be asked to contribute to it. It would probably pay them not only on patriotic but on business grounds.

Many of the *idola* pointed out in this article are common to the teaching of subjects other than French, though in several instances they would seem liable to exercise a special fascination on the teacher of French at the present time. The insufficiently equipped teacher must, as heretofore, follow more or less closely the beaten track of accepted method; but the really well equipped teachers, who are ever increasing in number, have no right to repose in dogmatic slumber. They can, and even should, be improving and adjusting the existing technique of the Reform Method. This is not a plea for Post-Impressionism in the teaching of French, but for well considered experiments on lines already laid down and accepted.

CORRESPONDENCE.

OXFORD RESEARCH DEGREES FOR WOMEN.

To the Editor of The Journal of Education.

SIR,—I had hoped that your Oxford correspondent would have drawn the attention of your readers to a Statute recently passed at Oxford by which women can qualify for research degrees in Letters and in Science, though they are not as yet admitted to the actual degree. The Statute corresponds very closely to that constituting the degrees

of Bachelor of Letters and Bachelor of Science, and the certificate for which women may become candidates is intended to be of the same standard as that which qualify men for these degrees. Candidates who have not taken a degree in Arts or Letters or Science at a University in the United Kingdom, or taken the degree course at Oxford or Cambridge, must provide evidence of a good general education, and all candidates must produce evidence of their fitness to enter upon a course of special study or research. A statement of the subject and nature of the proposed course must accompany the application, and must be transmitted to the Secretary of the Delegacy for Women Students, for consideration by the appropriate Board of Faculty, through the recognized society to which the applicant belongs or desires to belong. Only registered women students are accepted as candidates. The first woman accepted under the Statute belongs to the Society of Oxford Home-Students, and is a graduate of the National University of Ireland.

This Statute is the first step taken by the University to encourage research among women students, and it is hoped that it will attract to Oxford women who desire to obtain recognition for advanced work even though the recognition falls short of the degrees conferred on men.—Yours faithfully,

ANNIE M. A. H. ROGERS,

Hon. Secretary, Association for the Education of Women in Oxford.
Clarendon Building, Oxford.

EXAMINATION OF WOMEN IN ART AND MUSIC.

To the Editor of "The Journal of Education."

DEAR SIR,—It may be of interest to your readers to know that Convocation of this University has sanctioned an important change in the Regulations for the Admission of Women to University Examinations in Arts and in Music. It has now been decided that a woman who desires to substitute for Responsions (stated subjects) one of the Examinations specified in the Regulations must send in a certificate or certificates showing that in such Examination she has passed in (1) Latin and one of the following languages: French, German, Greek, Italian; (2) Algebra or Geometry; (3) Arithmetic, if that subject is included in the Examination. The important change lies in the fact that Latin is an essential subject in all certificates. It has, however, been agreed that all certificates

SUMMER SCHOOLS

AT

Scarborough, Falmouth, Great Yarmouth,

FROM

July 27th to August 22nd, 1914.

Director: MR. J. TIPPING.

All Handwork Subjects. Hygiene and Physical Training. Preparation for all Examinations. Excellent Hostel Accommodation. Send for Illustrated Prospectus to the Director,

MR. J. TIPPING, 85 Lower Rushton Road, Bradford.

PHYSICAL TRAINING COLLEGE FOR MEN STUDENTS.

THE LONDDN CENTRAL INSTITUTE FOR SWEDISH GYMNASTICS.

16, 17 & 18 Paddington Street, Marylebone W.

Anatomy, Physiology, Theory of Movements, Hygiene and kindred subjects necessary for a complete grasp of PHYSICAL EDUCATION are taught by QUALIFIED TEACHERS.

For particulars apply to the Principal, ALLAN BROMAN.

TELEPHONE: MAYFAIR 872.

obtained before October 10, 1916, will be accepted under the Regulations issued by the Delegacy for 1913-14.—I am, yours truly,

REGINALD W. JEFFERY, Secretary.

Delegacy for Women Students,
Old Clarendon Buildings, Broad Street, Oxford.
April 25, 1914.

"VERE NOVO."

OF all the gifts the year doth bring
I would not change for anything
Our holiday in early spring.
There's life and colour everywhere—
The earth, the sky, the very air.
We feel it even in the grip
Of trim, decorous park and street;
It whispers, "Give them all the slip,
And come where wind-swept hillsides dip,
And streams are swift, woods wild and sweet."
Scarce knew we all our need of grace
Until we met her face to face,
Nature, in her abiding place.
And pain, and pain it is to come
Where she doth speak, where we are dumb.
Hungered too long we ask not food,
And sickly view the feast outspread.
Her silence and her solitude
Like infants crave we for our good,
And sleep by her when we are fed.

Alas! to think that year by year
It is a harder heart we bear
To be refreshed, renewed by her.
And, thankless children though we be,

Have we but needs, the power hath she.
Well knoweth she of springs hid deep,
Of hopes forgot, of holy fears;
And, though we lull them fast asleep,
She bids them wake that we may weep,
And grow to laughter through our tears.

Of all the gifts the year doth bring
I would not change for anything
Our holiday in early spring.
In sloping fields the long-legged lambs
Lie, or run bleating to their dams,
Or race each other to and fro.
The rain sweeps by, the bare hills gleam,
Each budding twig is jewelled, and lo,
The hazels, catkin laden, glow
A golden beauty by the stream.

E. V. L.

VACATION TERM FOR BIBLICAL STUDY.—The twelfth Vacation Term for Biblical Study will be held this year at Oxford from July 25 to August 15. The central idea chosen this year for illustration is "The Vital Relation of Personal Religion to the Corporate Life of the Church." The Inaugural Lecture will be given by Dr. Holland, Regius Professor of Divinity, Oxford, and the following courses of four lectures have been promised. First week: "The Book of Ezekiel," by the Rev. W. F. Lofthouse, and "The Development of Personal Religion in the Old Testament and the Gospels," by Dr. McNeile. Second week: "Religious Experience of St. Paul," by Dr. Anderson Scott, and "Life within the Christian Community in the First and Second Centuries," by Prof. Kirsopp Lake. Third week: "The Relation of the Individual to the Community," by Clement Webb, Esq., M.A., and "I and II Corinthians," by the Rev. S. Kirschbaum. Hebrew and Greek Testament Readings will be held throughout the three weeks. The total cost to students, including lecture tickets, will not exceed £2 a week. Further particulars may be had on application to Miss E. Lawder, Secretary, 21 Richmond Road, Cambridge.

NEW EDITIONS OF PROF. L. W. LYDE'S GEOGRAPHIES WITH PROBLEMS AND EXERCISES ILLUSTRATED WITH DIAGRAMMATIC MAPS.

Professor Lyde's Geographies appeal particularly and, indeed, are specially adapted for, all those numerous teachers of the modern school of geography who believe in striking what is known as the human note in the geography lesson.

Cause and consequence, consequence and cause, and particularly cause and consequence in relation to mankind, should never be absent from the geography lesson. This is the human note. It should run through all stages, from the preparatory to the sixth form. The only difference of treatment will be that necessitated by the greater intelligence of the older boys.

The following are now ready, and the others will follow immediately.

SCHOOL GEOGRAPHY.

Small Crown 8vo. Price 1s. 4d. each. Bound in Cloth.
AFRICA. AMERICA. N. AMERICA. S. ASIA. EUROPE.
GEOGRAPHY OF THE WORLD (Price 3s. 6d.).

JUNIOR SCHOOL GEOGRAPHY.

Small crown 8vo. Price 1s. 4s. each. Cloth. Illustrated.
ENGLAND AND WALES (III). ASIA (V B).

To use the books, two accessories are absolutely essential—an atlas and a note-book—and the atlas should be especially one which emphasizes physical features.

The text itself, and the style of the books, lend themselves admirably to the best form of "note" taking—i.e., notes which are largely the work of the students themselves. The subject-matter of the books is presented in the form of paragraphs, or short sections, numbered for convenience of reference. There are very few of these paragraphs which do not invite extension, or explanation, or illustration in the note-book. And the simpler the illustration the better. Little map drawing should be required. It takes up too much time. Diagrams are quite as effective.

The problems and exercises at the end of the book should be made full use of. There are not many, but they are suggestive. Scores more of a similar type will occur to the interested teacher, and, for the matter of that, to the interested student. And if they do come from the latter, seize upon them at once, and incorporate them in the note-book. Let the watchword be—analyse, compare, co-relate. All the books of the series lend themselves admirably to these ends.

The above notes are culled from "Foreword to Teachers on the use of Prof. Lyde's Geographies," compiled by E. R. WETHEY, M.A., a copy of which will be sent on application to the publishers.

ADAM & CHARLES BLACK, 4, 5, & 6 Soho Square, London, W.

HARRAP'S LATEST PUBLICATIONS

A Brief History of English Literature

By E. M. TAPPAN, Ph.D., author of "In Feudal Times," &c. With many Portraits and other Illustrations, and with Full Index. Crown 8vo, 320 pages. 2s.

This interesting volume includes an account of all authors likely to be read in Schools, and forms an excellent introduction to more extended study.

A New Series

Fifty Titles in Active Preparation

Heroes of all Time

An Important Series of Books for Young Readers, well written and suitably illustrated. 8 1/2 x 5 1/2 x 1 1/2

This series will eventually include all the great men and women who have made a real mark upon the history of mankind. The aim of the authors is to present each hero in proper relation to his environment and the circumstances of his time: to exhibit him as typifying the great movements in the march of civilization of which he was in a measure the expression. The books will therefore record in an interesting manner the life and achievement of the central subject in each case, and will also give a vivid picture of the age. Whilst primarily designed for young people, the volumes will also appeal to the general reader.

All the qualities of careful editing, good illustrations, good paper and attractive binding which have made the *Told Through the Ages* Series so successful will be found to characterize this new undertaking.

Each volume contains 192 pages, with Eight Full-Page Illustrations. 1s.

FIRST VOLUMES

MOHAMMED. By EDITH HOLLAND.
ALEXANDER THE GREAT. By ADA RUSSELL, M.A.
AUGUSTUS. By RENÉ FRANCIS, B.A.
ALFRED THE GREAT. By A. E. MCKILLIAM, M.A.
WILLIAM THE SILENT. By A. M. MIALL.
MARIE ANTOINETTE. By ALICE BIRKHEAD, B.A.
JEANNE D'ARC. By E. M. WILMOT-BUXTON, F.R.Hist.S.
SIR WALTER RALEIGH. By BEATRICE MARSHALL.
THOMAS BECKET. By SUSAN CUNNINGTON.
BOYS WHO BECAME FAMOUS. By F. J. SNELL.

The Threshold of History

By H. R. HALL, author of *Days Before History*. With nearly Fifty Illustrations by NANCY SMITH. Crown 8vo, 160 pages, 1s.
 This volume follows the same author's *Days Before History* and deals with the Bronze Age in the same interesting and realistic manner as secured such a great success for the earlier book.

Picture History and Composition

By G. H. REED, M.A., Parmiters School. With 56 Full-page Plates and 56 pages of Letterpress. Crown 8vo, limp cloth, 10d. Teacher's Edition, 1s. 6d. net.

The plates in this volume cover the whole of English History, and the book is designed as a classroom text.

Magnetism and Electricity

A new Elementary Practical Course. By J. C. KIRKMAN, B.Sc., Head of the Physics Department, Swansea Technical College. With many Diagrams. Cheaper re-issue. Crown 8vo, 144 pages, 1s. 6d. net.
 This course is on new lines. The apparatus required is within the reach of most schools and colleges, and it will be found of particular value to teachers in evening classes.

Heath's Modern French Grammar

By W. H. FRASER, B.A., and J. SQUIR, B.A., Authors of *Heath's Practical French Grammar*. Crown 8vo, 350 pages, 3s.
 A KEY (for Teachers only), 5s. 3d. net, post free.
 A Book which resembles in method Part I of "Heath's Practical French Grammar," but is somewhat easier and covers all the essentials of French grammar.

Essentials of French Grammar

By C. W. BELL, M.A., King's School, Canterbury. With Exercises, Vocabulary, and Complete Index. Crown 8vo, 224 pages, 2s.
 This volume will prove useful to more advanced students who have been through an extended elementary course. Although small in size, the volume is comprehensive.

Intermediate Exercises in French Composition

By C. W. BELL, M.A., King's School, Canterbury. With Vocabulary. Crown 8vo, 112 pages, limp cloth, 9d.; cloth boards, 1s.
 This volume is specially designed to accompany the editor's *Essentials of French Grammar*, but will prove equally useful with any other textbook.

N.B.—The Publishers will be glad to forward to any address their Special New Descriptive List of Works on Modern Languages, comprising more than 400 volumes: Prospectuses of above and many other Books and Series on New and Interesting Lines.

GEORGE G. HARRAP & CO.

JUST PUBLISHED.

A SCHOOL STATICS.

By G. W. BREWSTER, M.A., Senior Mathematical Master, Oundle School, and C. J. L. WAGSTAFF, M.A., Head Master, Haberdashers' Hampstead School. Demy 8vo, pp. viii + 248. 3s. net. Postage 3d.

"We strongly recommend this book to the attention of our readers."—A.M.A.

"It is a pleasure to come across books of this kind."—*American Machinist*.

"We recommend the book to teachers of all types of students."—*London Teacher*.

"We can cordially recommend this book for private and for class use."—*Electrician*.

PERSE PLAY BOOKS.

New Volume.

No. 4.—FIRST FRUITS OF THE PLAY METHOD IN PROSE, with a preface by the Head Master (Dr. ROUSE) and an Essay on the method by H. CALDWELL COOK. Fcap. 4to, x + 184 pp. 3s. net. Postage 4d.

"Mr. Caldwell Cook's system is that of encouragement as opposed to repression, and above all of self-government. His method of teaching literature and essay writing is admirable. . . . The book contains many examples from the work of boys varying in age from 10 to 15. . . . To anyone conversant with the average essay produced by scholars of this age the contrast is exceedingly striking."—*Times*.

CO-EDUCATION IN PRACTICE.

By J. H. BADLEY, Head Master, Bedales School. Demy 8vo. Sewed. 1s. net. Postage 1d.

In view of the many recent discussions of the subject this is a most timely publication, for the author deals with co-education in practice with an experience of over fifteen years in his own successful school. His plea in favour of the system is based chiefly on the claim that it represents a nobler ideal of manhood and womanhood than that to which we are accustomed to-day.

BLACKIE'S**NEW LIST.****AN ELEMENTARY TREATISE ON NATURAL PHILOSOPHY.**

Based on the "Traité de Physique" of A. PRIVAT DESCHANEL, formerly Professor of Physics in the Lycée Louis-le-Grand, Inspector of the Academy of Paris. By J. D. EVERETT, M.A., D.C.L., F.R.S., Emeritus Professor of Natural Philosophy in the Queen's College, Belfast. Seventeenth Edition, reprinted from the sixteenth. Fully Illustrated. Demy 8vo, **7s. 6d.** net.

ELECTRICITY and its Practical Applications.

By MAGNUS MACLEAN, D.Sc., M.Inst.C.E., M.I.E.E., Professor of Electrical Engineering in the Royal Technical College, Glasgow. Demy 8vo, **10s. 6d.** net.

AN INTRODUCTION to PRACTICAL CHEMISTRY.

By G. B. NEAVE, M.A., D.Sc., and J. WATSON AGNEW, F.I.C., Lecturers and Demonstrators in the Department of Chemistry, Glasgow and West of Scotland Technical College. **2s.** net.

Primarily intended for the use of First Year Students of Chemistry before they proceed to a course of qualitative and quantitative analysis.

A TEXTBOOK OF ORGANIC CHEMISTRY.

English Translation from the German of A. BERNTHSEN, Ph.D.

New Edition.

Edited by J. J. SUDBOROUGH, Ph.D., D.Sc., F.I.C., Professor of Chemistry in the University College of Wales, Aberystwyth. **7s. 6d.** net.

SCIENTIFIC METHOD.

ITS PHILOSOPHY AND ITS PRACTICE. By F. W. WESTAWAY.

B.A. Super-crown 8vo, **6s.**

"An excellent book for Science Teachers and for the general reader who wishes to acquaint himself with scientific method."—*Nature*.

"Mr. Westaway's book . . . deserves the attention of all who are interested in the principles which underlie and regulate modern investigation . . . by judicious choice of representative passages a very clear and comprehensive idea of the evolution and present position of scientific method is conveyed to the reader, while in his comments upon doubtful points and antagonistic opinions he proves himself a sound and capable critic."—*British Medical Journal*.

A COURSE OF PHYSICS.

PRACTICAL AND THEORETICAL. By CHARLES H. DRAPER.

B.A., D.Sc., Author of "Heat and the Principles of Thermodynamics," "Light, Heat, and Sound," &c. Super-crown 8vo. 424 pages. Illustrated. Price **4s. 6d.**

SYSTEMATIC INORGANIC CHEMISTRY from the Standpoint of the Periodic Law.

A Textbook for Advanced Students. By R. M. CAVEN, D.Sc. (London), Lecturer on Chemistry, University College, Nottingham; and G. D. LANDER, D.Sc. (St. Andrews and London), Professor of Chemistry, Royal Veterinary College, London. **6s.** net.

"Many subjects of difficulty, such as the complex cyanides and the amines, are treated with much clearness and perspicuity, and most new things in inorganic chemistry are well elucidated. As good as any work that has been written with the same object, and a great deal better than most of them."—*Nature*.

REISSUE AT A CHEAPER PRICE.

A GENERAL TEXT-BOOK of ELEMENTARY ALGEBRA.

By **A. E. LAYNG, M.A.**, late Head Master of Stafford Grammar School; formerly Scholar of Sidney Sussex College, Cambridge; Author of "Layng's Arithmetic," "Layng's Euclid," &c.

With or without Answers. 530 pages. Crown 8vo, **3s.**

This work is intended for students who have already studied the easiest portions of a course in Algebra for a year or so, and provides all that is required for a complete school course.

Also issued in Two Parts (with Answers), at **2s.** each, to be obtained separately.

TILLAGE, TRADE, AND INVENTION. An Outline of Industrial History.

By GEORGE TOWNSEND WARNER, M.A., Sometime Fellow of Jesus College, Cambridge; Master of the Modern Side in Harrow School. Crown 8vo cloth, **2s.**

The aim of this book is to give a simple account of our Industrial History: of the land and those who worked it; of the towns and their trade; of our industries and their expansion; and of the steadily widening circle of British Commerce.

BLACKIE'S**ELEMENTARY REGIONAL AND PRACTICAL GEOGRAPHIES.**

By DAVID FREW, B.A.

Showing the human value of local conditions and place relations, and teaching the pupils why towns have sprung up in particular positions, and how to read a map.

BLACKIE'S ENGLISH TEXTS.

6d. each. Blue limp cloth covers. Over 100 Volumes. To be used in correlation with the study of **English Literature and History.**

THE WARWICK SHAKESPEARE.

Edited by Prof. HERFORD, Litt.D. The best and most widely used edition of Shakespeare for School purposes. Price **1s.** and **1s. 6d.**

IMPORTANT ADDITIONS TO BLACKIE'S PEDAGOGIC LIBRARY.**EDUCATIVE TOYS.**

An account of investigation with Montessori and other apparatus conducted at the Fielden School. By Miss K. STEEL, and Professor J. J. FINDLAY, Ph.D., M.A. **1s.** net.

A BOOK OF NATIONAL GAMES. Their Value, Organization, and Laws.

By HERBERT LEATHER, Head Master, The Boys' School, Tyldesley. **1s. 6d.** net.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

THE FUTURE OF THE ROYAL COLLEGE OF SCIENCE, LONDON.

By AN OLD STUDENT.

IT is sometimes overlooked that the movement now in progress for the reorganization of the University of London originated in an attempt to develop teaching and research in applied science at South Kensington. Lord Rosebery's letter to Lord Monkswell, at that time Chairman of the London County Council, which was published in June, 1903, gave the first public announcement of a scheme for establishing at South Kensington a new College of Applied Science working "in close co-operation" with the Royal College of Science, the Royal School of Mines, and the Central Technical College. The cost of the College was estimated at £300,000, and it was announced that a large contribution had already been offered by Messrs. Wernher, Beit, & Co. Advanced teaching and research in technology were to be the main objects of the College. A board of trustees was proposed, including the late Duke of Devonshire, Mr. Arthur Balfour, Sir Francis Mowatt, the late Mr. (afterwards Sir) Julius Wernher, and the Vice-Chancellor and Principal of the University of London, together with representatives of the London County Council, should that body agree to support the scheme. After negotiations, in which Mr. R. B. (now Lord) Haldane took an active part, the London County Council was induced to promise conditionally an annual grant of £20,000 to the proposed College. It should be noted that these proposals were in no way antagonistic to any of the existing colleges at South Kensington. The College was to be a new institution, designed to fill an admitted gap in the organization of higher education in London, and to form with the other colleges at South Kensington a complete and harmonious scheme for scientific and technical education. As to the University, Lord Rosebery at the end of his letter expressed a pious hope that it might be possible to follow up this scheme "by taking further steps towards de-

veloping the University in such a fashion as to make it worthy to be the University of the metropolis of the Empire."

The reasons why the Chancellor of the London University became detached from these important proposals have never been divulged and need not at this hour be investigated. One suspects that their real author was Lord Haldane, for he reappears as a member (and later Chairman) of a Departmental Committee of the Board of Education appointed in April, 1904, by the President of the Board (Lord Londonderry) to inquire into the working of the Royal College of Science, including the Royal School of Mines. The Committee published a Preliminary Report in February, 1905, in which they appear as the foster-parents of Lord Rosebery's scheme. They recommended in effect that "the proposed College of Applied Science" should be one of a federation of colleges, which was to include also the Royal College of Science, the Royal School of Mines, and the Central Technical College, under a common scheme of government and administration. It was important, they suggested, that the interests both of Pure and Applied Science should be adequately represented on the body administering the new institution. The Report is somewhat vague as to the future development of the work of the Royal College of Science; but, on the other hand, there is no suggestion that the name or individuality of the College was in any way in jeopardy. The Committee stated that in their opinion it might "be necessary hereafter to limit the instruction [in the new institution] to the higher branches of both Pure and Applied Science," a restriction which may be required in any college as education advances.

On April 3, 1905, the Board of Education officially communicated to the Departmental Committee their support of the "scheme" outlined in the Preliminary Report. In reply to the inquiry whether "if it is found possible to establish a scheme such as we [the Departmental Committee] have sketched in outline, they [the Board] will be willing to allow the Royal College of Science (including the Royal School of Mines) to be brought into it under a common government and administration," the answer of the Board was in the affirmative.

During the following eight months, however, some new and disturbing influence appears to have been at work, for in a letter dated November 23, 1905, the Board in defining the financial and other assistance offered by the Government in connexion with the transfer of the work of the Royal College of Science refer to "a scheme for the establishment of a new School of Pure and Applied Science at South Kensington," for the purposes of which the buildings of the Royal College of Science an annual grant of £20,000 and other assistance were to be given, provided the School were established on lines approved by the Board. No reference is made in this letter to the idea of a federation of colleges under a common scheme of government and administration, which was a characteristic feature of the scheme outlined in the Preliminary Report. The dates of these transactions are of more than academic interest, for Mr. Alfred Beit by his will, dated April 18, 1905—soon after the publication of the Preliminary Report, but before the publication of the Final Report—gave to the "College of Technology (including Mining and Metallurgy) in connexion with the University of London" £50,000 and five thousand Preferred Shares of £2. 10s. each in the De Beers Consolidated Mines. Particulars of the will were published in the *Times* on July 21, 1906.

The Final Report of the Departmental Committee, in which the Board's letter of November 23, 1905, is reprinted, was published in January, 1906, and its recommendations, without substantial modifications, are embodied in the Royal Charter of the Imperial College of Science and Technology approved on July 8, 1907. The emphasis of the Final Report is unmistakably on the side of technical studies. Thus the purposes of the Imperial College are stated in the Charter to be "to give the highest specialized instruction and provide the fullest equipment for the most advanced training and research in various branches of science, especially in its application to industry. . . . For these purposes the

Governing Body, subject to the provisions of the Charter, are to carry on the work of the Royal College of Science and the Royal School of Mines, and may establish Colleges and other Institutions or Departments of Instruction."

Article VI of the Charter provides that the name and diploma of the Royal School of Mines shall be continued by the Governing Body, but no such provision is made in respect of the Royal College of Science. Indeed, Mr. McKenna, on May 30, 1907, clearly indicated, in reply to a question in the House of Commons, that the name of the Royal College of Science might be abolished by the Governing Body. The adequate representation of Pure Science on the Governing Body, regarded as "important" in the Report of the Departmental Committee, is reduced to one representative of the Royal Society, as compared with eight representatives of technical societies. Sir Alfred Keogh's evidence on behalf of the Imperial College before the Royal Commission on University Education in London is also to the point. Speaking of the purposes of the Imperial College, he said:—"We were established for the purpose of teaching the industries how valuable science is to them. . . . I think I may say the Governing Body as a whole hold that it was distinctly placed upon the Imperial College by the Departmental Committee to the exclusion of every other consideration. If it were not so, the Imperial College would never have been established at all." He went on to say that it was the declared policy of the College to get rid of the elementary students, and to do nothing but post-graduate work later on. Subsequently, when other representatives of the Governing Body of the Imperial College appeared before the Royal Commission, Sir Robert Morant drew attention to the inconsistency between such a policy and the explicit instruction given in the Charter "to carry on the work of the Royal College of Science and the Royal School of Mines," which, he pointed out, was as much an essential duty and purpose of the Imperial College as the development of post-graduate work. Towards the conclusion of a lengthy and somewhat severe cross-examination of the witnesses on this point, Lord Justice Sir Robert Romer, one of the Commissioners, stated that from a legal point of view the Governing Body were under an obligation to carry on the work of the Royal College of Science. "Minor modifications undoubtedly, but anything which would really change the nature of the School you have no power to do, and it would be changing the nature of it if chiefly occupied with pre-graduate instruction—it would be a substantial alteration in my view, if you changed it into a post-graduate system of education." In reply to this criticism it was suggested that it might be possible to obtain an alteration of the Charter. Further evidence of the ideals towards which the Governing Body of the Imperial College are working may be found in an advertisement of the College recently published in the *Times*, which stated that "the courses of instruction in the College are intended to prepare students for industrial careers in which scientific knowledge is an essential." Such a program, it need hardly be said, is a travesty of the past work of the Royal College of Science (which forms a large, and perhaps the most important part of the Imperial College), for the College has produced many teachers and investigators of both Pure and Applied Science, and also men who have gained distinction in many other professions. At one of the annual dinners of Old Students, Mr. H. G. Wells, who spent some years at the College, admitted that he was "just a sample of the Royal College of Science tailings."

The inference to be drawn as to the future position of the Royal College of Science in the educational organization at South Kensington appears to be fairly plain. The College ought to be given an assured position, with adequate guarantees as to the continuance of its name, its work, and its traditions, and also as to its management by a Committee sympathetic towards scientific education and the advancement of pure science, and competent to promote the interests of the College. A full recital of the reasons pointing to this conclusion need not be attempted, but as to the continuance of the name of the College, which is in no way guaranteed by the Charter of the Imperial College, reference

may perhaps be made to the special appropriateness of the attribute "Royal" as commemorating the magnificent work of the Prince Consort in the cause of scientific education. It was the "Prince Consort's Committee" which led to the foundation in 1845 of the Royal College of Chemistry, afterwards to be merged into the institution since known as the Royal College of Science. Sir Norman Lockyer, a former Professor of the College, in an address delivered at the College in 1898 on the history of scientific instruction, says of the Prince Consort, "From that year (1845) to his death he was the founder of our English educational renaissance, drawing to himself men like Playfair, Clark, and De la Beche; knowing what we lacked, he threw himself into the breach. This College is one of the many things the nation owes to him."

It may reasonably be hoped that the Departmental Committee of the Board of Education which is now considering the recommendations of the Royal Commission on University Education in London will adopt the suggestion that the Royal College of Science should have restored to it in some measure a separate individuality. In that event the question of the best means of promoting higher teaching and research in Applied Science will at once arise. One of the unfortunate results of the 1907 reorganization is that the governing body of the Imperial College, overburdened with other duties and obligations, have been able so far to do very little towards developing higher teaching and research in Applied Science, to the necessity for which the whole reorganization at South Kensington was due. A new building has recently been erected for chemical technology, and a professor and associate professor appointed; but the output of research on the industrial applications of chemistry and other sciences is so far negligible. Here the need for a special committee, able to bring the work into close touch with industrial methods and needs, is most apparent. It may safely be said that Applied Science will never make substantial progress in our Universities and Colleges unless the work is organized in special departments, Colleges, or Faculties, working in close co-operation with corresponding departments, Colleges, or Faculties in Pure Science. Mr. W. A. Caspari, in a well-informed article published in the *British Review* of November, 1913, speaking of the Pure Science Departments in our Colleges, says: "It is not the curricula that are at fault; it is the atmosphere, the habit of thought, the tradition; in the final analysis it is the personality and outlook of the teaching staff. For some mysterious reason the old scholastic view of education—science for science' sake—remains strongly entrenched in even the most modern of our chemical departments." The result of this last glorious fact has unfortunately been that, in the absence of special departments devoted to industrial applications of chemistry and other sciences, Applied Science, other than engineering, has not made much headway in our Universities and Colleges. The best hope for the future at South Kensington will be found in giving students a complete and thorough scientific training at the Royal College of Science in the inspiring atmosphere of Pure Science, and then to transfer those whose future lies in the industrial applications of science to a special College working "in close co-operation" with the Royal College—an Imperial College of Technology, which would also draw to itself highly trained students from other London Colleges and from Universities and Colleges throughout the Empire. In this way the position of the Royal College of Science would be assured, Lord Rosebery's original proposals would take definite shape, and the idea of a federation of Colleges, adumbrated in the Preliminary Report of the Departmental Committee of 1904, would be realized. Such a method of organization would not involve any wide departure from a reasonable interpretation of the provisions of the Charter of the Imperial College, and it would fit in well with the recommendations of the Report of the Royal Commission on University Education in London, in which a distinction is drawn between the work of the Faculty of Science and that of the Faculty of Technology. The City and Guilds Engineering College is at present administered by a special Delegacy and has its own Dean. It would take its natural place in the federation as an Engineer-

ing College; and similarly the Royal School of Mines as a Mining School.

In conclusion one may frankly admit that in any reorganization of educational institutions at South Kensington—or in London generally—difficulties are sure to be encountered. Certain qualities must be presupposed in all parties concerned if these difficulties are to be overcome. There must be a spirit of intellectual honesty which can deal with equal candour and impartiality with all the interests involved; and, more important perhaps, a spirit of chivalry, which will pay due respect to the traditions of institutions and the beliefs and aspirations of their *alumni*. "On the bleak desert of industry and contract it is the breath of a spring; on the grim loom and engine it is the touch of a glory; on the drilled and well appointed army it is the spark of devotion which is victory."

REVIEWS AND MINOR NOTICES.

A History of Greece to the Death of Alexander the Great.

By J. B. BURY, D.Litt., LL.D., F.B.A., Regius Professor of Modern History, and Fellow of King's College in the University of Cambridge. (Pp. 907. 8s. 6d. Macmillan.)

This is a new edition of Prof. Bury's well known history of Greece. It must be the most widely used history of Greece in this country. We see that since its original publication in 1900 it has been reprinted eight times. There is little doubt that it deserves its popularity. It is well written and interesting, in most respects eminently scholarly and admirably furnished with illustrations of coins and with maps. In this new edition the first chapter has been entirely rewritten. In 1900 Sir Arthur Evans was beginning the excavations in Crete, which have revolutionized our knowledge of the early history of the Aegean, and Prof. Bury now attempts to summarize the results of these discoveries. We notice with interest that he gives up the untenable idea that Greek came into Greece with the Achaeans, and holds that the civilization of places like Mycenae represents a Cretan overlordship of a Greek population. The Cretans were the castle-building Normans of the time. He is also influenced by the recent work of Dr. Leaf and Mr. Allen in finding much more historical fact in Homer than scholars would have dreamt of admitting ten years ago, and, like Prof. Myres, accepts the traditional date of the fall of Troy, 1184 B.C., as approximately correct.

The other important changes in this edition are the revised accounts of the battle of Plataea and of Salamis. Prof. Bury has, we are glad to see, given up his fantastical reconstruction of the former battle, and come back to something more like the account of Herodotus. The list of authorities at the end of the volume has also been brought up to date.

Prof. Bury's history is an excellent book for the beginner and stimulating and interesting reading for the student who knows his authorities, but it is by reason of one great defect a very bad book for the University student. The author continually departs from or supplements the accounts of events given in the original authorities, without saying when he does so, or making any distinction between what has and what has not authority behind it. No doubt for many readers it is better to have a consistently worked out history, in which they are not continually pulled up and reminded how much is knowledge and how much is conjecture. For the University student, however, one of the great educational advantages of Greek history is that the authorities are comparatively few and are easily mastered, and the student can learn more easily than almost anywhere else how to deal with authorities.

It may be difficult to write a history which should serve both the general reader, who does not want to be bothered with sources, and the student: but it has been done. E. Meyer, for example, has solved the problem admirably by intercalating paragraphs in smaller print, in which he quotes authorities and notices the difficulties which they raise. Grote discusses sources in the text and quotes them plentifully

in his notes. Prof. Bury does, indeed, in his notes at the end of the volume, give a list of authorities for the substance of each paragraph, and also refers extensively to modern books and articles, but he hardly, if at all, distinguishes either in the text or in the notes when he is following the authorities and when he is reconstructing them. He occasionally admits that we cannot come to any certain conclusion on a particular question, as, for example, in his account of Solon's reforms; but he seems to do that only when he himself has not made up his mind, and not, as he surely ought to do, whenever any certain decision between various alternatives is impossible. Take, for example, his account of the battle of Marathon. He describes how the Persians, after waiting at Marathon for some days, resolved to march round by Pallene, and detached a portion of their army to guard against Greek attack, all as if it was as certain as the fact that a battle was fought at Marathon—not a word to show that it is conjecture from beginning to end. Two pages later he refers to the incident of the shield, which he has not worked into his theory of the battle, though others have, as an unsolved historical puzzle, as though the question as to whether the Greeks only engaged with a portion of the Persian army, and if so, what the rest of the army was doing, were not just as great a puzzle. The consequence of this is that the student who has been brought up on Prof. Bury's history only learns with great difficulty to distinguish fact from conjecture.

If only Prof. Bury had taken his readers more into his confidence, his list of authorities, both ancient and modern, is so good that his readers would have had at one and the same time a stimulating reconstruction of Greek history and the means by which they could have discovered the material out of which the reconstruction has been made. We might thus have had the best history of Greece we are likely to have in English until someone translates Edward Meyer. As it is, students will get great profit from Prof. Bury's history if they come to him with a warning.

From Locke to Montessori. By WILLIAM BOYD.
(2s. 6d. net. Harrap.)

Books on Dr. Montessori, of which we have had too many, have been mostly written by partisans and admirers, beginning with Mr. Edmond Holmes, and these have provoked one-sided criticisms. Dr. Boyd, by considering her in relation to her forerunners, has raised the controversy to a higher level. "Nothing new under the sun" is the motto of the cover, but the author is careful to add that this implies no censure, that the highest form of originality may consist in new combinations and applications of ancient theories and principles, and he further urges that the Montessori Method must be judged not by the Children's Home at Rome, nor by the patent apparatus which is doomed before long to the lumber room, or possibly the Pedagogical Museum, but by the conceptions of child nature and nurture that inspired them.

In the first six chapters we have studies of Locke, Condillac, Pereira, Rousseau, Itard, and Séguin. Dr. Boyd has already given us the most complete account of Rousseau as an educationist that exists in English. Dr. Montessori ignores or disparages him, yet, as far as theory is concerned, we may say with truth, "Nihil est in Montessori quod non prius fuerit in Emilio." Of special interest is the account of Séguin, a name unfamiliar at present, but one that is destined to figure in every future history of educational reformers. Dr. Montessori is proud to call Séguin master, but, as Dr. Boyd shows, she ignores or misunderstands the underlying philosophy of his methods which she has adopted. "She recognizes in general terms that the training of body has ultimately a value for the life of spirit, but in practice she concentrates attention on the training of each single function without any concern about its place in the whole physical and mental activity."

Full justice is done to the distinctive merits of the system—the insistence on the individuality of the child and the substitution of free development for rigid drill and military discipline. The radical defect is no less clearly indicated. Dr. Montessori has never heard, or has forgotten, the ancient dictum of Aristotle that man is a political animal, no more

conceivable apart from society than a bee apart from the hive. Her child of Nature is a figment of the brain, and her life-spirit, her soul of the child, a mysterious entity, farther from fact than Wordsworth's child in the famous Ode. Nor is she consistent. The elaborate measurements of her "Antropologie" and her child-charts lead to nothing. In the Casa there is no difference of treatment between the sanguine and the lymphatic, the short and tall, the butcher's son and the charwoman's daughter. Again, when she tells us that in the Casa all ill-bred acts, or such as interfere with the interests of others, are of course corrected and suppressed, she shews her good sense, but throws her logic to the dogs. "To pick your own nose" or punch your neighbour's head is just as natural as to play with bricks in a corner. The child is part angel, as Wordsworth taught, and part ape, and the problem of the educated is to evoke the divine and to eradicate the apelike. The radical mistake of the Montessori system is that it barely recognizes the *divinae particulam aurae*, and is blind to the *veteris vestigia fraudis*.

On page 33 there is a confusing misprint, "trifling" for "stifling," and on the cover "Coudillac" for "Condillac."

Lectures on Dryden. Delivered by A. W. VERRALL.
Edited by MARGARET DE G. VERRALL. (7s. 6d. net.
Cambridge University Press.)

This course of Lectures, delivered in 1911 by the late Dr. Verrall as the first King Edward VII Professor of English Literature, existed only in notes, but these were so full and have been so skilfully pieced together by his widow that the reader, were he not informed, would not perceive their origin. Various causes determined the subject. First, that Dryden was a Trinity man; secondly, that he had fallen into comparative neglect; and, lastly, that his versification had hardly been studied at all, and that his misrepresentation of Aristotle had been exposed; yet the true theory of the dramatic unities had never been satisfactorily expounded.

There is little in Dryden for the exercise of Verrall's peculiar genius, his instinct for detecting and solving problems. The sense is generally plain, and there are hardly any corruptions of the text; but on page 116 there is one brilliant emendation: the transposition of a comma improves both the metre and the sense. Light is also thrown on several passages of the "Absalom and Achitophel," and the running comment on this poem, which forms the longest lecture in the volume, makes us regret that Dr. Verrall did not live to complete his projected edition. To the reader, the many lengthy quotations from familiar poems may seem unnecessary padding, but to his audience, who listened to the perfect elocution, they were better even than the comments.

The lecture of most permanent interest is, as we have hinted, that on Dryden's "Essay of Dramatic Poesy." It points out not only where Dryden misread Aristotle, but how he came to misread him, analyses the plots of typical Greek tragedies, to show how far they observe the canons of the Poetics, and deduces the essential characteristics of the drama for all time. Most of the critics who have treated this trite theme have written in their studies; Dr. Verrall seems, as we read, to be talking to us from the stalls.

Dr. Verrall brings to his task the first qualification of a critic. He loved his poet before he undertook to show that he is worthy of our love. His love, indeed, is this side of idolatry, and he does not hesitate to paint the warts. We are grateful to him for pointing out beauties in his verse that we had failed to notice, but we cannot accept his final estimate, or rank Dryden, as did Scott, the third in order of English poets, even with the added proviso that Wordsworth and Tennyson may, in the judgment of posterity, come to be bracketed with him. To classify great authors in order of merit is indeed a vain superstition; but if we must follow the lead of Scott and Gray and Dr. Verrall, we should put Dryden, as a writer both of verse and prose, almost at the top of the list, but as a poet we should award him only a second class. He has the *vis virida*, but he wholly lacks the quintessential element, "the sense of something interfused." Compare, for instance, his "Ode to St. Cecilia," which Dr. Verrall regards

as his highest flight, either with Wordsworth's great Ode, or (a fairer comparison, as the themes are the same) with Browning's "Abt Vogler." They move in different planes. Put beside the singers of our age, Dryden is only sublimated prose.

It is as a prose writer more than as a poet that Dryden has exerted a permanent influence on English letters. The matter of the Essays and Prefaces is here fully discussed, but we wish that Dr. Verrall had dealt more fully with the manner and analysed the style in the same admirable way as he has that of Scott. And what a brilliant lecture he might have given us on Dryden as a translator! But we are sighing for what is not, and ought rather to be grateful both to him and to Mrs. Verrall for what we have.

Alice Ottley. Compiled by MARY E. JAMES.
(6s. Longmans.)

This book is the study of a remarkable personality. Miss Ottley, the first Head Mistress of the Worcester High School for Girls, possessed few of the qualifications which would now be expected of candidates for such a post. She had no University education, her academic attainments were represented by Honours in the Cambridge Higher Locals. Her experience of teaching, before her appointment, had been gained with private pupils, and during a few terms' work in a private school; and she knew little of organization beyond what she had learnt in the few weeks she spent as temporary Head Mistress of the Oxford High School. On the other hand, she was a lady with culture and accomplishments, she had what she herself called in others "the charisma of teaching," and, above all, she had the conception of her calling as a vocation. It is naturally, therefore, of Alice Ottley rather as a personality than as the head of an organization that we read in this volume. She was the saint amongst head mistresses. She had not only deep religious feeling, but she had the sweet and tranquil temper of the nun, and that combination of gentleness and force which is a more potent influence in the world than women of the present day like to admit. We may, perhaps, doubt the wisdom of some of her methods, her system of prayers three times a day, or her advice to children to repeat some words of a hymn while going from one classroom to another during Lent, but no one can doubt the uplifting influence of her personality. It was felt by everyone who came in contact with her. It shines out in her letters and the letters of others about her, which constitute the greater part of this volume. She was delightfully old-fashioned; she used to read aloud to her staff while they did needlework, and Tennyson's "Idylls of the King" is the most secular of the books mentioned; she objected to cricket for girls above fourteen; and she attached great importance to accuracy in minute detail, especially in writing and speech. Altogether a character of whom in days of bustle and hurry it is good to read.

Miss James has done what she modestly calls "the compiling" very well, but we wish she had told us more about the studies and pursuits of the High School girls, and so made her book a contribution to the history of education as well as a study of a remarkable character.

Training the Boy. By WILLIAM A. MCKEEVER.
(6s. 6d. net. Macmillan.)

The principles upon which the importance of which Prof. McKeever insists are of almost universal applicability. It should be the aim of every system of education to build up a sound and clean body and mind and to encourage strength of character and the attributes which are essential to the making of good citizens. It is a feature of many systems of education besides those current in the States to recognize the value of properly directed play. With a little judicious superintendence, the superabundant energies which in children find their natural outlet in play may be directed into channels which will convert them, too often allowed to run to waste, into a store of latent energy of the greatest possible value to the adult in after life and to the community of which he is a member. With regard to the practical application of such principles, the conditions of social and industrial life in this country are so different that we fear much of the wisdom contained in these pages must remain for us of a theoretical character. But, even so, the author displays so firm a grip upon many of the difficulties

which beset the path of the educator, and so bold a determination to combat the evils to which the young are almost inevitably exposed in a modern industrial State, that his work cannot fail to be of value to those of us who see in a perfection of our educational system the likeliest means of achieving a higher standard of social and moral welfare.

The Three Gifts of Life. By NELLIE M. SMITH.
(2s. 6d. net. Cassell.)

The number of books on sex instruction for young people is increasing, with the opinion that such instruction is necessary. It is important, however that books dealing with the subject should not sentimentalize, nor yet treat the sex function as a mere animal act; the *via media* is a sane, open treatment that does not lay too much stress on the analogy to plants and animals, and that fully indicates the *human* element as expressed in deliberate choice of a partner, in responsibility for children, and in love as apart from desire. The aim of the book before us is sensible and well carried out; and the ideal placed before girls reaches a high level:—"Women can do three things to help the race progress; seek the best in themselves, demand the best in men, and teach little children how to use their gift of choice." According to the author the three gifts of life are dependence (possessed by plants), instinct (possessed by animals as well as dependence), and choice (possessed by human beings in addition to the other two). Two long chapters deal with plant life and animal life respectively, and we doubt whether the average girl would read far enough in the book to reach the important chapters that deal with human life and the gift of choice. It is essential in this subject that young people should not feel they were being talked down to, and that impression rather gathers force in the course of the book. Apart from this the treatment is good, and the advice regarding the "race instinct" exceptionally so: "recognize and welcome this life force so as to make it a blessing instead of a curse; direct and control the reproductive instinct so that it may do good instead of harm; that it may bring life to the individual and benefit to the race, thus becoming a true race instinct. Then the life force will be like a river flowing through its channel, watering the land along its banks, and turning the mill wheels on its course; a blessing to all with whom it comes in contact." These pages will give much material to adults for quiet talks to girls, and form profitable reading to serious-minded girls.

The Truth about an Author. By ARNOLD BENNETT.
(2s. 6d. net. Methuen.)

"Habent sua fata libelli." That an autobiography that first appeared in *The Academy*, that was paid for at the rate of two guineas a chapter, that was next published in book form and fell flat, being disposed of as a remainder, should now be published at half-a-crown and sell by the thousand, is one of the romances of literature. To admirers of Mr. Bennett, among whom we count ourselves, it will prove a disappointment. It professes to be a "Confession," a piece of ruthless realism, and it does reveal the struggles of a journeyman pressman, but the *Wanderjahre* throws little light on the chronicler of the Three Towns. The most interesting revelation in the volume is that the author's "naturally sound taste in literature" was nurtured by a study of Maupassant, the de Goncourt brothers, and Tourguénief, who filled him with a general scorn of English fiction that he has never quite lost. Possibly the knack that Mr. Bennett has acquired in his prentice days of reviewing novels without reading them may partly explain this general "scorn."

Reminiscent Gossip of Men and Matters. By JAMES BAKER.
(6s. Chapman & Hall.)

Mr. James Baker is a modern Ulysses who "has seen the cities of many men" (we will not finish the quotation), and he has kept a notebook, or rather many little black notebooks. Kings and clowns, playwrights and players, war correspondents and clubmen, are flashed upon us in an endless series of lantern-slides. It is a book to dip into in any idle five minutes, and the reader is pretty sure to pull some plums from the lucky-bag. To try and read it consecutively would be as bad as an hour on the merry-go-round to the accompaniment of a steam organ. Is it too much to ask Mr. Baker to cut out the padding, reject the chestnuts, and rearrange under headings? The half would be worth double the whole. He should also get some friend to revise the French and German. There is hardly a German sentence, and they are plentiful, without some misprint or blunder.

Child-man in Britain. By F. ASHFORD, B.Sc.
(2s. 6d. net. Harrap.)

Primitive man has suffered, like many another, from becoming the fashion in education. The consequent demand for information about him has been met by a flood of literature on the subject, fiction freely filling in the gaps left by scanty facts. From the

historical point of view this is much to be deprecated. It is therefore with relief we turn to this modest volume, which makes no attempt at consecutive narrative, but confines itself to an account of actual relics and traces of primitive man in Britain, with chapter and verse duly given. Occasionally the author lapses into imaginary conversations in the traditional English of the North American Indian type (e.g. "tired of chop chop"), but this may be forgiven for the solid worth of the rest of the book.

Rambles among our Industries. By WILLIAM CLAXTON.
(9d. each. Blackie.)

This is a delightful and much-needed series. Even if it is not possible for a child to be interested in and have knowledge of the industries of England, it is at least possible and desirable that it should know something of the industries of its immediate neighbourhood. In this series the knowledge is given in a most attractive form, a brief sketch of the evolution of the industry is given, and modern processes are described with admirable clearness and illustrated by pictures and diagrams. This series should be of great help to teachers in handwork, taken along the lines of Prof. Dewey, and in geography and history lessons. We have no doubt the series will be a most popular one with children.

(1) *Antiquities of India.* By L. D. BARNETT. (12s. 6d. Lee Warner.) (2) *The Indian Theatre.* By E. P. HORRWITZ. (2s. 6d. Blackie.)

(1) Too little of the history and achievements of India is known, and this lack of knowledge concerning one of the noble countries of the ancient world is especially regrettable among teachers. How many, in dealing with Alexander the Great or with the Seven Years' War, think it necessary to give some conception of the literature and civilization of ancient India? Yet, with a land linked so closely with ours, such knowledge is essential for any adequate understanding of the Hindus. If these two books, then, do no more than arouse an interest in the wonders of India they will have served a good purpose; but each does more than that. Dr. Barnett, in his learned volume, gives an account of the history and culture of ancient Hindustan. We do not catch glimpses of the "soul of a people," as in Margaret Noble's "Web of Indian Life," but we obtain a general survey which would fittingly follow such a book as hers. We hope Dr. Barnett will later on expend the same painstaking research and care for accurate detail in a companion volume on the social life, industries, and religious movements of the people. This volume is concerned with other aspects of ancient India. There is a full description of the law and government, which includes household and family regulations. We learn that in Vedic times child-marriage was unknown, as also was the remarriage of widows. The many and complicated details of the Vedic ritual are explained, and the practices of yoga and magic have a few paragraphs assigned to them. Dr. Barnett also deals with the scientific knowledge of the Hindus, their weights and measures, coinage, and multitudinous alphabets. In fact, as a work of reference the book is of great value, and particularly is this the case in the list of deities and the long chronology of India. The work is copiously and excellently illustrated.

(2) Prof. Horowitz gives charming pictures of an ancient Indian court scene, and the arrangements for the plays of Kālidāsa, India's greatest dramatist, who tells the story of "sweetest Sakuntala's magical tears." The drama in India originated from the ancient custom of reciting the national poetry at social and religious gatherings. "The Mahā-Bhārata and Rāmāyana supplied no end of subjects, even as the Bible was the inexhaustible source of the mysteries and miracle plays in medieval Europe." Several plays are retold by the author, and thus an idea is obtained of the intensity of feeling, the resignation, and the always happy ending of these dramas. Prof. Horowitz discusses the question whether the Greeks influenced the Indian theatre, and is inclined against the view of Greek influence. "The human mind, given similar conditions, shows the same tendencies and possibilities everywhere, and, if dramatic literature originated independently in China and in Greece—well, the same could have happened in India." Comparisons are drawn between Hindu playwrights and Goethe, Schiller, and Shakespeare, and, in the author's opinion, the trend of modern Indian drama is to further the cause of a universal religion; but he is inaccurate in stating that "in the Mohammedan era Hinduism was ready for amalgamation with Islam, and under English rule it is equally prepared to join forces with Christianity." It is true that Hinduism does not persecute other religious beliefs, but it is also true that the Vedānta philosophy, the latest expression of Hinduism, does not approach orthodox Christianity. The last chapter, which deals with the question of a universal religion, is scarcely detached enough in its view. The book as a whole, however, gives the spirit of the Indian drama, and is an excellent introduction to the subject.

Vital Problems of Religion. By the Rev. J. R. COHU.
(5s. net. Edinburgh: T. & T. Clark.)

Mr. Cohu's study of certain problems more or less directly connected with religious thought at the present day is dedicated to, and has a foreword by, the Bishop of St. Asaph. The Bishop's foreword, whilst commending the author's attempt "to get at the inner essence of things," is a carefully guarded one, and does not answer the inevitable question how far it is expedient for religion to trespass upon the domain of her sister Science. However, the author has no doubt upon the matter, but plunges boldly into the problems aroused by the latest scientific discoveries and theories. In addition, he enters the lists of metaphysical controversy upon such old-standing quarrels as free-will, personality, and the nature of evil. Mr. Cohu's main contention is that the answer to the "Sphinx-riddle" of existence is to be sought not in material nature or in science, but in the heart. Such an attitude is logical enough, but is scarcely in accordance with that which the author has actually adopted in these pages.

The Fourfold Gospel. Section II: *The Beginning.* By EDWIN A. ABBOTT. (12s. 6d. net. Cambridge University Press.)

This is the eleventh volume of "Diatessarica; or, the Study of the Four Gospels," the work to which Dr. Abbott has devoted himself since he resigned the Head Mastership of the City of London School. It is the first volume of a comment to be concluded in four parts. The *idée mère* that has inspired it is the conviction, which years of study have only served to intensify, that the Fourth Gospel, though departing most widely from the literal fact, conveys most faithfully the inner meaning of our Lord's sayings and deeds, and reveals to us most clearly the mind of Christ. In all seriousness we may say that Dr. Abbott endorses the young Levite's traditional answer: "The first three Gospels are synoptic, but St. John's is Divine." Much in the volume appeals to the professed theologian, and requires a knowledge of Hebrew, Syriac, and Rabbinical literature to appreciate fully, but the main argument can be followed by any intelligent Bible student, who will find questions raised that are ignored by the standard commentators, and new light thrown on many dark problems. Thus, it is shown that an apparently simple question—"What is meant by 'the beginning of the Gospel'?"—cannot be fully answered in less than twenty-five pages. Sometimes we may think the deductions oversubtle, as when the subjectivity of angelic appearances is founded on the epithets "ascending" and "descending," and the doctrine of the letter that kills and the spirit that gives life has by no living commentator been so powerfully enforced.

The Entomologist's Logbook. By A. G. SCORER.
(7s. 6d. net. Routledge.)

This is a Dictionary of the British Macro-lepidoptera, in which the names, both in Latin and English, are arranged alphabetically. Under each name one finds short notes relating to the egg, larva, pupa, and perfect insect. Thus information is given, wherever possible, about the food plant of the larva, the position in which the pupa may be found, the favourite haunts of the imago, its hours of emergence, and its egg-laying habits, including the time occupied in hatching. The whole book is interleaved, so that the collector may make notes of his own observations in the place appropriate to them. The entomologist should find this volume very useful in identifying specimens; also in providing him with hints about the time of year when he may expect to find these specimens, and what insects are likely to be caught on the plants in a particular locality.

A Textbook of Botany. By E. STRASBURGER.
(18s. net. Macmillan.)

This standard work on botany is too well known to need any review. It will be sufficient to call attention to the fact that this is the fourth English edition, and that it has been revised with the tenth German edition. Very considerable changes have been made, notably in the sections on Physiology and on the Phanerogams. Many of the diagrams of flowers have been printed in colour, and are beautifully reproduced.

Livy, Book XXVII. Edited by S. G. CAMPBELL.
(3s. Cambridge University Press.)

This is a scholarly edition, dealing fully with all textual and grammatical difficulties, and in the introduction with the history, the distribution of the Roman legions, the strategies and battles of the Metaurus, and with Livy's sources. For the site the Editor follows most recent historians in favouring the right bank. We are still sceptical as to the possibility of a body of 6,000 foot and 6,000 horse marching at the rate of thirty-three miles a day for seven consecutive days even under the most favourable circumstances. None of Napoleon's forced marches approaches this rate.

Fabliaux et Contes du Moyen Âge. Edited by J. E. MANSION.
(1s. 6d. Harrap.)

A selection of French folk-tales as modernized and adapted for

young persons by M. Tarsot. M. Mansion has added brief notes and a vocabulary. They make an excellent reader of simple, yet idiomatic, French for beginners. To some it will seem a profanation to put to such uses the exquisite prose poems of Aucassin and Nicolette, and the warning to the modern schoolgirl not to emulate the patience of Griselda must be "meant ironically."

Dietrich von Bern. Adapted and edited by A. E. WILSON.
(1s. 6d. Oxford University Press.)

The text is taken from Schalk's "Deutsche Heldensagen," and there is the usual apparatus of notes, questions, and vocabulary. It would add to the pupil's interest if more were told him of the legend. Where, for instance, is "Lamparterland," and why is the sword called "Nagelring"? The vocabulary, too, is not quite complete, e.g. *fahr wohl* and *Felsenmeer*.

Mathematical Education. By G. ST. L. CARSON.
(3s. net. Ginn.)

This is a collection of essays which, with two exceptions, have appeared in print before. Such a collection naturally lacks the connectedness of a continuous book, but the essays discuss some of the prominent questions of the day in a very readable form. The one on "Intuition" is, perhaps, the most interesting.

- (1) *A Shorter Algebra.* By W. M. BAKER, M.A., and A. A. BOURNE, M.A. (2s. 6d. Bell.) (2) *A School Algebra.* By F. O. LANE, B.Sc., and J. A. C. LANE, M.A. (3s. 6d. Arnold.) (3) *An Algebra for Preparatory Schools.* By TREVOR DENNIS, M.A. (2s. Cambridge University Press.)

(1) The first of these books is a partial reprint of the authors' well-known "Elementary Algebra." It contains most of the first part of that work and about half of the second part. From the latter are taken the chapters on indices and surds, ratio, proportion and variation, and the progressions, and the course thus covers the ground of various Matriculation and other examinations. Some new examples have been added and the revision papers altered, but otherwise there is nothing new in the book to call for extended notice. For students who do not wish to read more widely than is necessary for Matriculation purposes the new version, issued at so low a price, cannot fail to be welcome.

(2) Though following closely on the lines of one or more of its predecessors, and therefore possessing little novelty of any consequence, this will be found a useful textbook for certain classes of readers who have no need of a detailed or extensive acquaintance with the subject. It is moderate in price, its appearance is attractive, the examples are varied, though, if anything, they err on the side of being too easy. Some difficulties are omitted, others are postponed, but, in the latter case, the authors wisely point out the nature of the assumption that is made. Graphs are used chiefly as geometrical illustrations of the solution of equations.

(3) The third book is of a different type. It is intended for use in preparatory schools, and follows the syllabus of mathematical teaching for non-specialists issued by the Curriculum Committee of the Head Masters' Conference. Bookwork and explanations are left for the teacher to supply; here and there a rule is given which it is essential that the reader should know and remember, otherwise the book consists entirely of examples. We know of few textbooks for beginners in which the conceptions new to algebra are introduced so gradually and with so much skill. The pupil who has worked his way through this book may not have a profound knowledge of algebra, but he will at least have laid a good foundation and will have nothing to unlearn when he proceeds to a more advanced textbook.

The School Algebra. Matriculation Edition.
By A. G. CRACKNELL. (4s. 6d. Clive.)

The algebraic theory is here based on the fundamental laws obtained empirically in arithmetic, and geometry is called in to illustrate, not to prove. A prominent feature of the new edition is the numerous worked examples. It fully satisfies the requirements of London matriculation.

Exercises in Mathematics. By D. B. MAIR, M.A.
(4s. 6d. Macmillan.)

This will be found a very useful book, especially in revision work. The ground of the ordinary mathematical course is covered. The book is not a mere collection of examples and answers; the classification is careful, and incidental hints and suggestions add greatly to the value of the book. Mr. Mair does not ignore examinations, those influential but too often conservative forces. He shows clearly, however, which parts are put in solely from the examination point of view by such headings as "This section has little educative value."

The Writers' and Artists' Yearbook, 1914. Edited by G. E. MITTON. (1s. net.) *Who's Who Yearbook, 1914.* (1s. net. A. & C. Black.)

In noticing "Who's Who" we omitted to acknowledge these two supplementary volumes, with the contents of which all our readers will be familiar. Under the article "Copyright" there is

an extraordinary oversight. The editor does not seem aware that the Copyright Act came into force on July 1, 1912, and gives the old law of forty-two years from the date of publication or the author's lifetime and seven years after his death.

A Primer of English Literature. By WM. T. YOUNG.
(1s. Cambridge University Press.)

Mr. Young's "Primer" stands half-way between Stopford Brooke's "Primer" and Henry Morley's "First Sketch." It must contain, at a rough estimate, five times as many names as Brooke and not a tenth of the names to be found in Morley. The author is a lecturer in the Goldsmiths' College, and his aim, he tells us, is to serve as a prospector or taster, to point out to his pupils what there is to be read either for its historical importance or for its intrinsic, and so stimulate them to pursue for themselves the period or the authors to which they are attracted. A history of English literature from Widsith down to Marius the Epicurean in some two hundred pages is a *tour de force*, but Mr. Young has succeeded in surveying the whole field, and there are few great names of authors and works missing. If there is a fault, it is that the canvas is too crowded. Thus, in the paragraph on "The Successors of Pope" there are some fifty names. Mr. Young has a happy gift of epigram, and he often hits off an author's characteristics by an apt phrase or pregnant epithet. The biographical element is almost wholly lacking. This, we think, is a mistake. We do not want "chatter about Harriet"; but nothing interests the young student so much as personal details, and we cannot fully appreciate the poetry of Shelley or even of Pope without knowing something of the man, his parentage and education, his friends and fortunes. Long quotations are, of course, inadmissible in a primer, but we should have liked to see some of "those jewels five words long" which Matthew Arnold used so effectively in his criticisms.

"Famous Families in British History."—*The Black Douglasses.*
By D. C. STEDMAN. (1s. Nelson.)

No Scotch family will show a more illustrious roll than the Douglasses, from William, the first Earl in the middle of the fourteenth century, to the last Earl James, who died a monk in the Abbey of Lindores in 1488. Their story is clearly and vividly told by Mr. Stedman. A genealogical table, with dates, would be a useful addition for the young reader.

Our Empire: a Booklet for Teachers, Parents, and Young People. By F. J. GOULD. (1s. Longmans.)

The British Empire is a present fact which must be recognized. It is foolish and useless to depreciate the fact; it is criminal to exploit it. The teacher's duty lies in expanding the pupil's imagination and invoking the spirit of service to this Empire, for which purpose this little book not only supplies a need, but gives an inspiration. It appeals to a wide circle, and is a mine whence material may be dug for lessons—historical, geographical, civic. And, as the author says in his preface, "throughout all the notes and data and the biographical and historical illustrations there runs the interconnecting thought of a great responsibility, of civic duty and courage, and of broad and generous sympathy." After giving a broad view of the Empire and showing the oneness of the vast Commonwealth, the author devotes some pages to industry and peace, which sound the keynote of the book, for the martial element is minimized throughout. Each section of the Empire is taken in turn and treated historically, while special emphasis is laid on enterprise, and full credit is given to other nationalities, such as the French Canadians, who have partaken in the making of the Empire. Prominence is given to India; the descriptive passages here are some of the finest, and the different aspects of its life and its history and literature are treated in such a way that Hindus as well as English can read with appreciation. Such types as Cook, Darwin, Mrs. Chisholm, Mother Cecile, &c., are chosen as typical empire builders, and their lives are sketched; all of them have been concerned with the victories of peace. Mr. Gould is able to induce an atmosphere of beauty in the common things of life, and here he depicts the thrill of adventure, the romance of the conquest of Nature, the poetry of industries, and gathers it together to depict it all for the reader as the slow growth of true civilization. This aspect, combined as it is with common sense and facts, makes the book of value to all who use it, while the concluding chapter on the Call of the Empire gives a noble inspiration. We should like it to be read aloud in every school as a conclusion to the remarks made on Empire Day.

"Oxford Edition of Standard Authors."—(1) *Historical Essays.* (2) *Literary Essays.* Contributed to the *Edinburgh Review* by Lord MACAULAY. (1s. 6d. each. Oxford University Press.)

In a plain, tasteful binding, and with good print, these two volumes form an agreeable contrast to some school editions of Macaulay. They are entirely suited for subsidiary textbooks in upper forms, and their price is not prohibitive.

(Continued on page 336.)

MACMILLAN & CO., LTD., ST. MARTIN'S STREET, LONDON, W.C.

MACMILLAN & CO.'S LATEST LIST.

ENGLISH.

A First Book of English Literature. By GEORGE SAINTSBURY, M.A., D.Litt., LL.D., &c., &c.
1s. 6d. [First Books of Literature.]

PALL MALL GAZETTE.—"Those who have the will to understand the great writers of England will find in Professor Saintsbury's little book all the guidance that is profitable for them. And truly they can have no better fortune than to make acquaintance with this admirable *gradus* as soon as possible, and to disdain its help only when they can look back with a clear eye upon the procession of masters and masterpieces which lies between Beowulf and Meredith."

A First Book of English History. By F. S. C. HEARNshaw, M.A., LL.D., Professor of History in King's College, University of London. Illustrated. 1s. 6d. [First Books of History.]

Irish History for Young Readers. By Rev. H. KINGSMILL MOORE, D.D. Illustrated. 1s. 6d. [First Books of History.]

Notes on the Teaching of English. By W. J. BATCHELDER. Part I, Junior, 1s. 6d. Part II, Senior, 1s. 6d.

EDUCATION.—"This excellent textbook. . . . The author shows clearly how important the subject is, and how necessary it is to have methods well founded on psychological principles. . . . The book is admirably adapted for its purpose, and is highly recommended."

BOOK II.—Just Published.

Sertum: A Garland of Prose Narratives. Selected and Edited by J. H. FOWLER and H. W. M. PARR.

Book I. Sixteenth to Eighteenth Centuries. Book II. Nineteenth Century. With Frontispieces. 1s. each. [English Literature for Secondary Schools.]

The Autocrat of the Breakfast Table. By OLIVER W. HOLMES. Edited with an Introduction and Notes by C. R. ROUNDS, Inspector of English, Wisconsin State Normal Schools. 1s. net. [Pocket Series of English Classics.]

Lockhart's Life of Scott. Abridged and Edited with Introduction and Notes by O. LEON REID. With Frontispiece. 1s. net. [Pocket Series of English Classics.]

GEOGRAPHY.

A Junior Geography of the World. By B. C. WALLIS, B.Sc. (Lond.), F.R.G.S., &c. With Coloured and other Maps and Illustrations. 2s. 6d. [Macmillan's Practical Modern Geographies.]

THE SCHOOLMASTER.—"Mr. Wallis's excellent manual should receive a warm welcome in central and secondary schools. It will also prove invaluable to the elementary teacher who wishes to give a progressive bias to his geography teaching, without going to extremes. By the publication of this book Mr. Wallis has considerably enhanced his high reputation as an authority on the teaching of geography."

FRENCH AND GERMAN.

Victor et Victorine. Par Madame J. G. FRAZER, Auteur de "Émile et Hélène," &c. Dessins de H. M. BROCK. 1s.

EDUCATIONAL NEWS.—"This is a really charming book for quite young beginners. . . . The illustrations are really delightful. Mrs. Frazer's name is sufficient to recommend it in any case."

SIEPMANN'S ADVANCED GERMAN SERIES. New Vols.

Prinz Friedrich von Homburg: ein Schauspiel. Von HEINRICH VON KLEIST. Edited by G. F. BRIDGE, M.A. 2s. 6d.

Word and Phrase Book to same. Sewed, 6d. **Key**, 2s. 6d. net.

Die Erhebung Preussens gegen Napoleon im Jahre 1813. Von GUSTAV FREYTAG. Edited with a selection of Original Documents and Poems of the Time. By OTTO SIEPMANN. 2s. 6d.

Word and Phrase Book to same. Sewed, 6d. **Key** to same, 2s. 6d. net.

MATHEMATICS AND SCIENCE.

Exercises in Mathematics. By DAVID BEVERIDGE MAIR, M.A., sometime Fellow of Christ's College, Cambridge. With Answers and Hints, 4s. 6d.; also without Answers and Hints, 3s. 6d.

THE A.M.A. CIRCULAR.—"To the large, and, we believe, increasing body of mathematical teachers who object to the inclusion of theory and worked examples in mathematical textbooks, this collection will undoubtedly be very welcome."

Practical Mathematics for Technical Students. Part I. By T. S. USHERWOOD, B.Sc. (Lond.), A.M.I.Mech.E., and C. J. A. TRIMBLE, B.A. 3s. 6d.

THE A.M.A. CIRCULAR.—"The chapters on logarithms, the slide rule, the lineargraph, and the determination of laws, are particularly good. Teachers of mathematics in technical schools and classes will do well to consider the adoption of this manual."

Test Papers in Elementary Algebra. By CLEMENT V. DURELL, M.A., Assistant Master at Winchester College. 3s. 6d.

THE A.M.A. CIRCULAR.—"The papers are in sets of ten, classified according to subject; they should prove very useful for revision work."

Mathematical Papers, for Admission into the Royal Military Academy and the Royal Military College, 1806-1918 inclusive. Edited by R. M. MILNE, M.A. 6s.

An Introduction to Nature Study. Part II. Animal Life. By ERNEST STENHOUSE, B.Sc. Illustrated. 2s.

EDUCATION.

An Introduction to Logic from the Standpoint of Education. By L. J. RUSSELL, M.A., B.Sc., Lecturer in Logic in the University of Glasgow, &c. 2s. 6d. net.

THE A.M.A. CIRCULAR.—"The author has produced a first manual of logic, not only useful for examination purposes to the student in training, but interesting and suggestive to the general reader."

MACMILLAN & CO., Ltd., ST. MARTIN'S STREET, LONDON, W.C.

- (1) *Sertum. A Garland of Prose Narratives. Book I; Sixteenth to Eighteenth Centuries.* Edited by J. H. FOWLER and H. W. M. PARR. (2) *Wanderings in Spain. Selections from GEORGE BORROW.* Edited by T. A. CAVANAGH. (Each 1s. Macmillan.)

The first volume gives promise of a well chosen selection of English prose for secondary schools. There are four extracts from Bunyan, two from Defoe, and one each from Berners, Froissart, Anson, Goldsmith, and Cowper. There is no indication of the form for which they are intended, but all are within the capacity of the lower fourth, except the Berners. It would tax the capacity of a six form boy from Froissart's rambling chronicle to write, as required, "a brief account of the battle of Otterburn." The notes are somewhat scanty. Thus the sites of Otterburn, Pontland, &c., are not indicated, and "to win again his pennon," in the very first sentence, will puzzle the fourth-former. The extracts from Borrow's "Bible in Spain" are more fully annotated, and the Introduction gives a racy account of the author's life and works.

The "Peter Pan" Wall Pictures. (2s. 6d. net each. Bell.)

These pictures, which measure 20 in. by 30 in., are enlargements of Miss Woodward's charming illustrations of the story of "Peter Pan," the popularity of which has suggested their reproduction as wall pictures. They are admirably adapted for use with large classes. We hope they will find their way into primary as well as secondary schools.

UNIVERSITIES AND SCHOOLS.

LONDON.

Prolonged discussions on the future of King's College for Women have concluded by the decision of the Senate to transfer the Arts and Science Departments of the College to King's College in the Strand, as from next Christmas. The present buildings of the Women's Department in Kensington Square will be given up, and the new Home Science Department will go to new buildings in Campden Hill, which are to be inaugurated by the Queen early in May. After these transferences, the three Departments are, until further order, to be regarded as still forming part of King's College for Women. An appeal for an additional endowment of £30,000 is to be issued by the Home Science Trust Fund Executive Committee.

The presentation of graduates is fixed for May 13, and will be followed by a special service at Westminster Abbey, at which the Bishop of London will preach the sermon.

Dr. Foster and Prof. Hill have written to the Press to explain the action of the Senate in regard to the presentation of evidence on behalf of external students before the Departmental Committee of the Board of Education on the University. The question at issue was whether the witnesses selected by the External Council should be authorized to represent the views of the Senate or the views of the Council of External Students. An amendment to the effect that the representations should be on behalf of the Council of External Students was defeated by 19 votes to 18, and the original motion which implied that the representatives should express the views of the Senate was carried by 22 to 16. Dr. Foster and Prof. Hill point out that the majority of six cannot be regarded as a substantial majority, and the number of those in favour of the motion is not an absolute majority of the Senate, which contains fifty-six members. Nevertheless, the result must be regarded as significant and as implying that the University as at present constituted will not be a consenting party to any abrogation of the privileges of external students. The representatives of the Senate who are to go before the Departmental Committee are Dr. Russell Wells, Sir Albert Rolit, Dr. Graham Little, Prof. Loney, and Prof. Crossley.

Announcements of advanced lectures open to the public include three lectures by Dr. Oswald Külpe, of the University of Bonn, on "Psychologie und Aesthetik," at Bedford College, on May 25, 27, and 29, and two lectures by Prof. Paul Sabatier on Catalysis, at King's College, on May 14 and 15.

Awards.—Gilchrist Studentship in Modern Languages—Mr. G. H. Chase, B.A.; Gilchrist Studentship for Women—Miss Gladys Miall-Smith, D.Sc.; Mitchell Studentship—Mr. W. Piercy, B.Sc.

OXFORD.

The coming term in not likely to be much occupied with new legislation. The Responsions students will have to face its last stages in Congregation and Convocation. Its opponents threatened at the outset that if amendments concerning the requirements of the examination were not accepted it would be thrown out in its last

stages. It remains to be seen now whether they will be able to fulfil their threat. On the whole the chances of the statute passing have grown steadily more favourable. On the other hand, the statute which was to follow it, setting up a real University Entrance Examination, is not likely to be seriously brought forward. Almost no one has a good word for it. It is possible that a statute amending the composition of the Council in yet another form may be introduced, if Council persists, in spite of all rebuffs, in reforming itself. If that is done, Council will have carried in the statutes they have promulgated almost all the ground covered by their plan of reform, except the question of women's degrees.

The town has been much exercised in the Vacation by the announcement of the formation of an Oxford University Co-operative Society. It is formed on the familiar co-operative lines, inspired, it is said, by men who know something of Sir Horace Plunkett's work in Ireland, and want to spread the gospel of co-operation. It will certainly do a good work if it diminishes the extent of the credit system. Pessimists hold that to ask an undergraduate to pay cash is to ask an impossibility, but that difficulty has been overcome in Dublin. In the meantime Oxford tradesmen are trying to show that their prices are as moderate as possible. It is difficult to find anyone to agree with them.

LADY MARGARET HALL.—The following scholarships have been awarded:—A Jephson Scholarship of £60 to Hilda F. M. Prescott, Wallasey High School (History); the Old Students Scholarship of £50 to G. E. E. Webb, Bournemouth High School (Science); one of £30 to E. M. Williams, Cheltenham Ladies' College (English); one of £20 to E. M. Bradshaw, private tuition (Classics); an Honorary Scholarship to G. E. G. Watkins, Durham High School (German). The following scholarships will be offered for competition in March 1915:—A Jephson Scholarship of £60 a year, a Scholarship of £50 a year, and one of £40 a year, all tenable for three years during residence.

ST. HUGH'S COLLEGE.—The following scholarships have been awarded:—One of £25 to Hilda C. Allen (English); one of £25 to Mary C. G. Stanford, Roedean School (French). Highly commended: Kathleen A. Edwards, Howell's School, Llandaff (English), and Dorothy S. Ramage, St. George's High School, Edinburgh, and Guilde Internationale, Paris (French). The following scholarships will be offered for competition in March 1915:—The Clara Evelyn Mordan Scholarship of £40 a year, and a Scholarship of £30 a year, both tenable for three years during residence.

WALES.

The annual Collegiate Meeting of the Guild of Graduates of the University of Wales was held at the University College, Bangor, under the presidency of the Warden, Dr. Chattaway. After the usual routine business had been completed, Mr. Ballinger, the Librarian of the National Library, gave an interesting address on "The Functions of a National Library." He suggested as its first duty the preservation of the literature of its own country; as the second, the collection of books which would serve to promote the acquisition of knowledge and further research; and as the third, the duty of bringing these within the reach of those people who could profit by their use. Owing to geographical difficulties, and in proportion to its area, its exceptional literary and educational activity, Wales required exceptional treatment. The authorities of the Welsh Library had recognized these difficulties, and by a system of loans, the advantages of the National Library had been made available over a wide area.

Mr. Ballinger spoke with enthusiasm of the support which the Library had received in the industrial districts of South Wales, where colliers, tinplate, and other workers were levying, through their clubs, sums ranging from 3d. to 1s. per man. Many public bodies had also contributed generously towards the cost of the new buildings. Prof. A. H. Trow was re-elected Treasurer of the Guild, and Mr. J. G. Davies, of Neath County School, as Clerk.

Lord Kenyon presided over the meeting of the Governors which was held at Barmouth, on Wednesday, April 22. **University College, Bangor.** For the first time in its history the Court indulged

in the luxury of a political debate, and for a time the proceedings were rather exciting. It all arose out of a circular signed, among others, by Lord Kenyon, deprecating the receipt by the College of any portion of the funds which, in the event of the passing of the Welsh Disestablishment Bill, would be set aside as grants to the three colleges and other public institutions in Wales. One or two of the speeches were purely political in character, but the majority of the speakers expressed no opinion on the proposals of the Bill, and were merely content with urging the Court to pass on to the next business. In the end the Governors resolved to take no action, which was, without doubt, the wisest plan to adopt.

HORLICK'S MALTED MILK

MALTED BARLEY, WHEAT, and MILK in Powder Form

The wholesome nutrition of pure rich milk and choice malted grain, supplying strength and vigour, with little tax on digestion. Instantly ready for use by stirring briskly in hot or cold water.

NO COOKING REQUIRED.

Equally useful to both

TEACHERS AND SCHOLARS.

A glass of "Horlick's" is an ideal lunch, as a delicious and nourishing food-drink may be easily prepared in a moment. **Keep a bottle in your desk.** Horlick's Malted Milk will be found to supply the strength and energy so necessary during the long hours of study, and its use will prevent lassitude.

An efficient corrective of insomnia, taken hot before retiring.

HORLICK'S MALTED MILK LUNCH TABLETS.

A delicious food confection, to be dissolved in the mouth. Especially useful during study for exams.

In Glass Bottles, 1/6, 2/6, 11/-, at all Chemists and Stores. Liberal Sample, either in Powder or Tablet Form, for trial free by post on request.

HORLICK'S MALTED MILK CO., SLOUGH, BUCKS.

Hints on French Syntax.

By **FRANCIS STORR**, B.A. Camb., Officier d'Académie, Occasional Inspector to Board of Education, Scottish Education Department, and Central Welsh Board; Examiner to Oxford and Cambridge Joint Board, Cambridge Higher Locals, Scottish Education Department, Civil Service Commission, University of London, &c., &c.

"A capital little book, which we have no hesitation in recommending to French students."—*The Pall Mall Gazette*.

"Mr. Storr's Hints are to the purpose. They are intended for schoolboys, but grown-up people who wish to avoid making elementary blunders in either writing or speaking may use them with advantage."—*The Athenæum*.

London: **WILLIAM RICE, 3 Broadway, Ludgate Hill, E.C.**

A deputation of the Governors of this school has waited upon the Denbighshire Education Committee to call attention to the urgent need of converting the school into a dual school. They had 108 boys in the school, but only 34 girls from the district were receiving secondary education, whereas, according to the percentage in the rest of Wales, 114 girls should be attending an intermediate school. The difficulty with regard to the scheme appears to be due to the dilatoriness or the obstinacy of the Board of Education.

SCOTLAND.

Glasgow. Dr. Carl H. Browning, Lecturer in Bacteriology at the University and Director of the Laboratory of Clinical Pathology at the Western Infirmary, has been appointed Director of the new Pathological Institute at the Middlesex Hospital, London. Mr. George D. C. Stokes, D.Sc., Lecturer in Mathematics at the University, has been appointed Senior Mathematical Master at the High School of Glasgow. Mr. David K. Picken, M.A., Professor of Mathematics at Victoria College, Wellington, New Zealand, and formerly Lecturer in Mathematics at Glasgow University, has been appointed Master of Ormond College, in the University of Melbourne. The election of the new Lord Rector is to take place on Saturday, October 24. At the request of the Secretary of the University Court, Mr. A. J. Balfour has given to the University the ten envelopes on which he wrote the brief notes for his recent course of Gifford Lectures.

Aberdeen. Lord Haldane having declined the offer of the Chancellorship of the University, the General Council has unanimously elected to the office the Earl of Elgin, K.G., who is Chairman of the Executive Committee of the Carnegie Trust. Lord Elgin was also Chairman of the Committee which recommended the recent Treasury Grants, and he was one of the Commissioners under the Universities Act of 1889. The University is promoting an Ordinance to revoke a provision of an existing Ordinance which disqualifies any person who is a professor, lecturer, or University assistant or demonstrator in any one of the Universities of St. Andrews, Glasgow, or Edinburgh, from being appointed an external examiner in the University of Aberdeen. The draft Ordinance has been approved by the General Council. A proposal to institute a post-graduate degree in education has also been adopted by the General Council. The question of the payment of fees by the Carnegie Trust has been under consideration, and the General Council has resolved to invite a conference of representatives of the four General Councils to discuss the question whether the Carnegie Trust should continue to pay part of the fees to all qualified applicants, irrespective of their necessities.

Edinburgh. Prof. Bergson is delivering his first course of Gifford Lectures on "The Problem of Personality." The course will consist of eleven lectures, of which nine will be in French and two in English. The list of honorary degrees to be conferred at next graduation includes the following names:—D.D.—The Rev. Prof. Curtis (Aberdeen University), and the Right Rev. G. H. S. Walpole (Bishop of Edinburgh in the Scottish Episcopal Church); LL.D.—Dr. Byron Bramwell (Edinburgh), Sir Charles Dalrymple, Bart., Prof. G. Gregory Smith (University of Belfast), the Hon. Lord Guthrie; Dr. Paul Mayer (Zoological Station, Naples), Dr. F. Walter Mott, F.R.S. (London), and Prof. J. A. Smith (Oxford).

Secondary Teachers' Salaries. The Secondary Education Association of Scotland is sending a circular to its branches, strongly recommending that in every school where the scale of salaries is seriously inadequate the staff should make collective application to the managers for an improved scale, and where there is no scale should press for the institution of one. The school correspondent is requested to communicate to the branch secretary precise details of the result of the application, and to intimate the fact of the application to the Press. The Association has also considered the question of the relation between the salaries of men and those of women, taking into account the economic and social questions involved. The Salaries Committee of the Association, while differing as to the principles which should govern the payment of salaries to men and women respectively, are unanimously of opinion (1) that uniformity of payment as between men and women teachers is at present impracticable, and (2) that the disparity at present existing between salaries paid to men and women for the same work should be diminished.

School Board Areas. The branches of the Educational Institute are at present engaged in suggesting new administrative areas for School Boards within their districts. This is the result of a resolution of the Council of the Institute that Scotland should be divided into administrative areas specially delimited for purposes of education only. This resolution was carried

by a majority of 31 to 19, the minority being in favour of the county area. There is so much to be said on both sides of the question that it seems rather unwise for the Institute to commit itself at this stage in the movement for wider areas. The really important work is to get the Government to adopt the principle of extension, and the supporters of the parish area may be encouraged by division of opinion about details.

IRELAND.

Secondary Education. The text of Mr. Birrell's Bill to amend the law relating to intermediate education in Ireland was issued early in the month. Of its two principal clauses, the former deals with registration and provides for the constitution of a Registration Council consisting of representatives of (a) the teaching profession in Ireland; (b) the Intermediate Education Board; (c) the Department of Agriculture and Technical Instruction; and (d) Universities and other bodies interested in education, at the discretion of the Lord Lieutenant. To this Council shall be assigned the duty of framing regulations for a Register of intermediate-school teachers, the Register to be formed and kept by the Intermediate Education Board. The second clause provides for the payment of a sum not exceeding £40,000 to the Intermediate Board each year, as a Teachers' Salaries Grant.

Since then the text for the proposed scheme for the application of the Teachers' Salaries Grant has also been issued. It states that: (1) the grant shall be distributed each year among the managers of intermediate schools to whom result fees are payable, and in proportion to the amount of result fees earned by each school; (2) this method of distribution will be changed if at any time it is found that in the case *either* of the schools under Roman Catholic management participating in the grant *or* of those not under Roman Catholic management participating likewise, the proportion of lay registered teachers employed as whole-time teachers is less than one-fortieth of the entire number of intermediate pupils attending such schools; (3) such lay registered teachers are to be entitled to not less than three months' notice of dismissal, except in cases of grave misconduct, and to be in receipt of salaries at the rate of not less than £120 per annum for men or £80 for women. Until the expiration of one year after the establishment of the Teachers' Register, all teachers of twenty-one years of age and upwards who have been employed as whole-time teachers in any intermediate school for at least three years and are at present so employed in intermediate schools in Ireland, shall fall within the application of the scheme.

Primary Education. The Report of the Viceregal Commission on Primary Education still absorbs the attention of the National teachers. The teachers of the city and county of Dublin met at the end of last month to consider the report, and passed resolutions asking for the enforcement of its recommendations and, in addition, the unconditional reinstatement of Mr. Mansfield.

The forty-seventh Annual Congress of the National Teachers Organization was held in Derry, on April 14 and 15, with a large attendance, and was formally opened by the Mayor. Miss Mahon, the active President of the Organization—now in a second year of office—delivered an address, in which she summarized the demands of the Congress under five heads: (1) the carrying out without delay of the recommendations of the Committee of Inquiry; (2) restitution to the victims of inspection in Tipperary and Belfast, and included therein (3) the reinstatement of Mr. Mansfield; (4) the removal of the Resident Commissioner; and (5) the reconstruction of the Board on elective principles. Some of the outside speakers at the opening meeting expressed similar views to those of the president, notably the Rev. Dr. Bingham, Moderator-Elect of the General Assembly of the Presbyterian Church, who, in a vigorous speech, attacked the Resident Commissioner directly as the person chiefly responsible for the faults of the Board. At the final session of the Congress a long resolution was passed asking for the abolition of the office of Resident Commissioner and the reorganization of the Board on new lines, securing representation to parents, tax-payers, school managers, and teachers.

A Bill has just been presented in Parliament by Mr. Brady and other Irish members to enable Local Authorities in Ireland to provide meals for National-school children. The Bill empowers urban district or county borough councils to take such steps as they think fit and to co-operate with local committees to provide meals for children attending National schools within their area; to recover payment from parents for meals provided if they are satisfied that the parents are able to pay; and to obtain from the Local Government Board, out of the rates, such additional funds (within certain limits) as may be necessary to carry out their schemes.

Owing to the bequest of the late Miss Honan, who was in her life

EPOCHS OF FRENCH HISTORY. By E. A. WOOLF, B.A.

Histoire de France : I.—Les Premiers Français. By E. A. WOOLF, B.A., The County School, Ramsgate. 1s. 6d.

Histoire de France : III.—La Guerre de Cent Ans. By E. ALEC WOOLF, B.A. 1s. 6d. [In the Press.]

A MANUAL OF FRENCH LITERATURE. By J. P. R. MARICHAL, L. ès L., B. ès Sc., Lecturer in French at Queen's University, Kingston, Ontario. [In the Press.]

This brightly written handbook serves to give a bird's-eye view of the course of French literature, with useful sections on the history of France, a knowledge of which is often indispensable to the student of its literature. The book is written in simple French, and thus at the same time familiarises the reader with the vocabulary of the literary critic and of the historian.

FRENCH ESSAYS AND ESSAY-WRITING. By J. P. R. MARICHAL, L. ès L., B. ès Sc., Lecturer in French at Queen's University, Kingston, Ontario. [In the Press.]

A careful introduction, by a skilled and experienced teacher, to the writing of French essays. Judiciously graded exercises with copious model passages and valuable hints on method serve to lead the learner from simple beginnings to the advanced stages. The book can therefore be used as a companion during a considerable portion of the school course and in the early years of university work.

A BOOK OF ELEMENTARY MECHANICS. By C. S. JACKSON, M.A., and W. M. ROBERTS, M.A., Instructors in Mathematics at the Royal Military Academy, Woolwich. 3s. 6d.

London: J. M. DENT & SONS, Ltd., Aldine House, Bedford St., W.C.

General.

time a generous benefactor of University College, Cork, the College is to have a hostel for Roman Catholic students, to be known as the Honan Hostel, with a chapel attached. The hostel is to be under the charge of a warden, who is to be a married man, and to have a resident chaplain. A suitable building has already been secured for the purpose. A residue of £3,000 from the bequest is to be devoted to the completion of the Biological Institute of the College.

The Classical Association, in co-operation with the Royal Institute of Architects and the Architectural Association, has arranged for Mr. W. H. Goodyear, M.A., Curator of the Brooklyn Institute, New York, to give a course of three lectures, on May 13, 14, and 15, on his researches into certain refinements used by Greek and Medieval architects. The lectures will deal respectively with "Rediscovered Secrets of Medieval Art," "The Cathedral of Pisa," and "Notre Dame and other French Cathedrals."

PRIZE COMPETITIONS.

The Translation Prize for April is awarded to "Ex Oriente." *Proxima accessit* "Treb."

The winner of the Translation Prize for March is F. W. Bourdillon, Esq., Buddington, Midhurst.

Le signe le plus apparent des transformations qu'a subies la société depuis que je suis au monde est, suivant moi, la suppression de cette courtoisie charmante qui faisait de notre France la plus aimable et la plus facile des nations. Sans distinction de classes ni de fortunes, on trouvait partout, autrefois, bienveillance et affabilité; ces qualités étaient dans notre air; on mettait une sorte d'honneur national à rentrer ses griffes, à ne laisser voir que le moins mauvais côté de soi, et dans nos campagnes même, le plus humble des paysans eût été humilié qu'on pût l'accuser d'impolitesse et de grossièreté.

En étaient-ils meilleurs?—Je le crois fermement, car la forme fait partie du fond, et la vraie politesse des manières ne va pas sans cordialité.

Laissons dire ces austères farceurs qui, pompeusement, négligent l'apparence, sous prétexte de sincérité, et cherchent en toute chose la vérité toute nue, le principe, l'essence, la moelle; les gourmands!

Le désir de plaire, en effet, est un raffinement du cœur et de l'esprit qui veut, pour se développer et se répandre, le loisir, la sécurité.

—Il lui faut, comme aux plantes délicates, une atmosphère calme et tiède. Ceux-là seuls songent à se faire aimer qui n'ont plus besoin de se faire craindre.

Aux époques de trouble, les moindres concessions sont un danger, car alors la bienveillance est taxée de faiblesse, et si l'on est simplement poli, il semble qu'on désarme.

Or, l'art de plaire, tel qu'on l'entendait autrefois, consistait précisément à se désarmer pour autrui. On était aimable moins par ses talents et ses avantages que par l'espèce d'abandon qu'on semblait en faire.

Plaire, c'était pour ainsi dire partager avec autrui. Briller, au contraire, c'est fouiller dans la poche du voisin.

On cherchait autrefois à se faire des amis; on songe maintenant à s'amasser un public.

La causerie était comme un échange de petits cadeaux affectueux; ce n'est maintenant qu'un boniment féroce, où l'on joue du poing autant que de la langue, et dont l'auditoire sort meurtri.

Je ne sais plus qui a dit fort joliment: "Le plaisir le plus exquis est d'en avoir pu donner aux autres, et d'avoir eu le bonheur de leur plaire: ce qui fait que nous ne sortons jamais plus contents de la conversation que lorsque nous pouvons nous flatter en quelque manière que les autres le sont de nous."

Cela est un peu recherché, je vous l'accorde, mais cette préciosité me plaît; me plaît d'autant plus qu'elle est moins généralement goûtée. Au milieu des rudesses qui nous entourent, je trouve plaisantes ces douceurs d'autrefois, j'aime ces petites oasis fanées, pleines des senteurs de ma jeunesse.

Et puis, quand on voit autour de soi tant d'ivrognes boire au tonneau des drogues infernales, on ne souhaite qu'une larme de liqueur bien douce, contenue dans un dé d'or.

By "EX ORIENTE."

The clearest sign of the changes through which society has passed since I have been in the world is, in my opinion, the extinc-

tion of the charming courtesy which made our France first among nations for amiability and ease of intercourse. Without distinction of class or fortune, one formerly found everywhere good will and affability; these qualities were in the air; people made it, so to speak, a point of national honour to draw in their claws, to show only their best side, and even in the country the humblest peasant would have been humiliated to be found guilty of discourtesy or boorishness.

Does it follow that they were better men? I firmly believe it does, for the form is part and parcel of the substance, and true politeness of manners is inseparable from a good heart.

We will not listen to the austere humbugs who ostentatiously neglect outward show on the plea of sincerity, and seek in all things the bare, naked truth, the inner ground, the marrow—greedy fellows!

The desire to please is really a subtle aroma of the heart and intellect which requires leisure and security in order to develop and spread.

It needs, like delicate plants, a calm, warm atmosphere. They alone think of making themselves loved who do not need to make themselves feared.

In times of strife the least concessions are a danger, for in such times good will is put down to weakness, and bare politeness seems a surrender.

But the art of pleasing, as it was understood in the past, did, in fact, consist in a surrender of arms in the interest of others.

People made themselves liked not so much through their talents and personal advantages as by seeming in a way to forgo them.

To please was, so to speak, to share with others.

To shine, on the contrary, is to put one's hand in one neighbour's pocket.

People sought formerly to win friends; the idea is now to get together an audience.

Familiar conversation was, as it were, the small change of friendship's give and take.

It is now only an aggressive hawking of wares; thumps alternate with arguments, and the hearers go away crushed.

Some one, I forget who, has quaintly said: "The most exquisite pleasure is to have been able to give pleasure to others and to please them ourselves. Hence it is that we never go away more content with a conversation than when we can flatter ourselves in some sort that the others are content with us."

The style is somewhat affected, I admit, but I like this euphuism; I like it the more as it is less to the general taste. Amid the asperities of our environment I find diversion in these old-world graces, I love these faded oases full of the fragrance of my youth.

Besides, when one sees around one so many sots drinking hell poison from the barrel, one desires only a drop of the mildest cordial, measured in a golden thimble.

We classify the 122 versions received as follows:—

First Class.—Hal, Sirach, Fred, Xerxes, Gaudeamus, Lord John, Nesko, J.E.H.F., Ex Oriente.

Second Class.—Eod, P.D.C., Borealis, Fortes et Fidelis, Anemone, Instar, Fortune le veut, Colocynth, Martinet, Emile, Primrose, T.W.F., Ossia, Menevia, S.M.M., Chislehurst, Yvetot, Peter Lunie, Editha, Pertinax, W.M.R., Chingleput, Curet, Andelot, Eicarg, Institutrice, H.M.S., L.W.S., W.L.S., W.S., Isault le désireux.

In the passage from Gustave Droz there were no difficulties of construction, but it contained a number of words for which there is no obvious English equivalent, and a misapprehension of the exact sense of a word often led to a perversion of the whole sentence. To take first a crucial instance: *boniment* is the clap-trap, the patter of a cheap-jack. With this key we may translate: "Nowadays conversation is nothing but the brawling of rival

(Continued on page 342.)

THE SECOND DIRECTORY OF WOMEN TEACHERS

is now Ready, price **7s. 6d.** net, post free **7s. 10d.**, owing to the fact that it contains some 7,000 more names. In it will be found full *official* details of Courses, Diplomas, Certificates, &c., for English Students in France. Also full information *re* German Degrees and Courses of Study. Both these articles present fuller information for modern language students than has ever been presented before in England.

cheap-jacks, in which the fist plays as large a part as the tongue, and the audience are flabbergasted." Next to this the third sentence caused most misadventures. *Farceur* is not "jester" or "fool." They are the Sir Oracles of "The Tempest," the Mr. Pecksniffs; and if *mœlle* is translated "pith" the whole point of *les gourmands* is lost. "As for these puritanical impostors (humbugs) who ostentatiously neglect appearances in order to proclaim their sincerity, who will have nothing but the naked truth, the essential element—the marrow, as it were—let them rant, the greedy guzzlers!"

To pass to minor points: *suppression* is not "suppression," but "extinction." *Facile*: "easy to get on with," "affable." *Dans notre air*: "in the air we breathed." *Rentrer ses griffes*: "to sheathe one's claws," not "to draw in one's horns," and "to show one's best side" sufficiently expresses what follows. For "the asperities of our environment," "the rudeness of modern society," *Je trouve plaisantes*: "I have a liking for these old-world amenities." *Une larme de liqueur*: "our crystal drop of exquisite liqueur (nectar). *Plaire c'était . . . briller c'est*. The distinction of tenses was commonly disregarded.

A Prize of Two Guineas is offered for the best verse translation of Jacques Nayral's poem "La Pendule," and one of Half-a-Guinea for the best prose translation:—

Le vent hurle, ce soir, avec de longs sanglots
Et fait tourbillonner la neige de décembre.
J'ai le plaisir douillet d'être dans une chambre
Bien chaude, que défend l'abri des volets clos.
Une lampe, d'écrans épais emmitouffée,
Eclaire faiblement les objets familiers
Aux contours vagues, et les angles sont noyés
D'ombre tiède, comme une ouate amoncelée.
Rien n'est plus doux que cet effacement discret
Des choses dont on sait les présences amies,
Et qu'on devine autour de soi comme endormies,
Plus tendres d'être ainsi, dans l'intime retrait.
Je suis tout pénétré d'une exquise paresse.
Mon corps dans le fauteuil à l'assoupissement
Propice s'allonge délicieusement,
Et toute la bonté des choses me caresse.

Je fume, je rêve, et, dans l'ombre où tout se fond,
Mes yeux demi-clos et ma pensée embrumée
Ne distinguent plus bien si c'est de la fumée
Ou des rêves qui s'envolent vers le plafond.

Je voudrais vivre ainsi des heures, des années,
Lentement, tièdement, sans penser, sans songer
Que le temps court et que je suis un passager
Qu'engloutira le flot haineux des destinées.

Et voici que j'entends le bruit, l'horrible bruit
De la pendule, avec son tic-tac implacable
Qui mesure le temps sans hâte, et qui m'accable
De son morne refrain: L'heure fuit, l'heure fuit...—

Je saisis l'odieux instrument, et je casse
Je ne sais quel ressort de ce monstre d'acier.
Là! Je n'entendrai plus l'appel du balancier
Résonner ironique au fond de ta carcasse!

Je m'apaise. Au fauteuil paresseux je m'étends,
Et peu à peu, dans ma muette solitude,
Je retrouve ma chère et tiède quiétude
Et la sérénité de vivre hors du temps.

Mais tout à coup, là-bas, déchirant le silence
Et violant l'abri de mon intimité,
Une horloge lugubre avec férocité
Annonce:—Il est minuit. Un jour nouveau commence...—

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by May 16th, addressed "Prize Editor," THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C.

Those in the First Class are entitled on application to a copy of "Essays, Mock Essays, and Character Sketches."

Translations sent with an addressed and stamped envelope and six penny postage stamps will be returned corrected. Foreign postage stamps are not accepted.

Translations will not be returned unless both these conditions are complied with.

PROSE PASSAGES

Chosen by JAMES BROADBENT MARSHALL, B.A.,

Honoursman in English.

Crown 8vo, 176 pp. ... published 1s. 6d. (Postage 3d. extra).

The compilation of this book was primarily suggested by the fact that, for some time past, a number of examining bodies have regularly set prose passages from standard English authors for reproduction as exercises in **Composition**, or to be taken down from **dietation** as tests of Spelling. The book provides, in convenient compass, an ample supply of just the right material needed for preparing pupils to pass such examination tests successfully.

It is designed also to serve as an aid to the study of **English prose literature** from the sixteenth century to the nineteenth; and, to this end, the one hundred and sixty-three passages, here put together in approximately chronological order, have been chosen as typical of the styles of their several authors. The range of authors—from Sir Walter Raleigh to George Borrow—and also of subjects is a fairly large and representative one; and pupils intelligently using this book will obtain a **first-hand acquaintance with a goodly number of the best English prose-writers.**

E. J. ARNOLD & SON, LTD.,

LEEDS, GLASGOW, and BELFAST.

CASSELL'S "MODERN SCHOOL" SERIES.

LITERATURE SECTION ("Tales Old and New").

An entirely new departure from the usual graded reader.

Special Features.

- (1) Each book contains verbatim extracts from the works of the masters in Literature from the earliest times to the present day.
- (2) The extracts have been chosen for their intense interest, and they will appeal to every child.
- (3) The extracts are arranged chronologically.
- (4) Each extract is preceded by a biographical note which describes the author's life and mentions his chief works.
- (5) "Spellings" have been omitted — but a splendid vocabulary finds a place at the end of each book.
- (6) Each book has eight coloured plates and numerous black-and-white illustrations.
- (7) The books are printed from carefully chosen type upon specially made, hard-pressed unglazed paper.

Books V and VI now ready. Books I to IV ready shortly.

LONDON, W.,

have a Department for SECURING
APPOINTMENTS as MISTRESSES
or MATRONS in Schools, and as
GOVERNESSES in Private Families.

They invite applications from qualified
ladies who are looking for posts in the
teaching profession.

The Agency, which is under distinguished
patronage, has been established 40 years.

Prospectus will be forwarded gratis on
application.

NO CHARGE FOR REGISTRATION.

No fee of any kind is due unless an
appointment be obtained through the
Agency.

GIRLS' SCHOOL TRANSFERS AND PARTNERSHIPS

Messrs. GABBITAS, THRING & CO. have a large number of **GIRLS' SCHOOLS** on the books of their Transfer Department, but **ISSUE NO LIST**. On learning a Purchaser's qualifications and requirements, they will send to her notices of opportunities likely to suit her. The following are examples of the Schools now on their books:—

No. **TRANSFER** of small Home School for 5,329. Boarders and Day Pupils, in pretty country district, near important **MIDLAND CITY**. 3 Boarders and 17 Day Pupils. Gross receipts about £300. Vendor, wishing to accept a post, asks only for price of schoolroom and furniture.

No. **TRANSFER** of Boarding and Day School 5,328. for gentlemen's daughters, in one of the **BEST RESIDENTIAL SUBURBS IN LONDON**. About 14 Boarders and the same number of Day Pupils. Prospectus fees 60 to 90 guineas, and 9 to 18 guineas. Gross receipts about £1,500. Goodwill £400. Good opening for lady with **SUITABLE CONNEXION**.

No. **TRANSFER** of successful School for 5,327. **BOARDERS ONLY**, at a well-known **INLAND EDUCATIONAL CENTRE**. 25 Boarders. Prospectus fees from 45 to 51 guineas. Gross Receipts nearly £2,000, and net profits nearly £500. **EXCELLENT PREMISES**. Capital required in the first instance £2,500.

No. **TRANSFER** of old-established **DAY SCHOOL** for gentlemen's daughters, with **PREPARATORY DEPARTMENT for Boys and KINDERGARTEN**, containing nearly 40 Day Pupils and Day Boarders. Prospectus fees from 9 guineas in Kindergarten to 22½ guineas. **GROSS RECEIPTS £850**. Profits £75. Goodwill £250.

No. **DAY connexion** in the Home Counties, 5,319. **D** suitable for a **LADY WITH NAVAL OR MILITARY CONNEXION**. Vendors moving to a different part of the country and taking Boarders only for the future. About 20 Day

Pupils. The only School strictly for **GENTLEMEN'S DAUGHTERS** in the locality. Receipts from Day Pupils nearly £400. Goodwill £150.

No. **TRANSFER** or **PARTNERSHIP**, with a 5,315. view to succession. School strictly for gentlemen's daughters, at South Coast Resort. About 20 Boarders and 12 Day Pupils. Fees £75 to £90, and 30 to 36 guineas respectively. Profits about £800. Excellent **PREMISES, SPECIALLY BUILT AND BEAUTIFULLY SITUATED**. Goodwill 2½ years' purchase. Premises would be sold or let.

No. **TRANSFER** of old-established and **SUCCESSFUL DAY CONNEXION** for gentlemen's daughters, in healthy **LONDON SUBURB**. **EXCELLENT PREMISES**. About 40 Day Pupils from 9 to 24 guineas, bringing in about £1,200 per annum. Goodwill £600, or capitation fees.

No. **TRANSFER** or Partnership in School 4,993. mainly for English Girls, at important **EDUCATIONAL CENTRE IN GERMANY**. Containing Boarders only, nearly 20 in number, at prospectus fees of 81 guineas. Gross Receipts over £2,500. For the Goodwill of the whole £1,200.

Further information will be sent to applicants, but Messrs. GABBITAS, THRING & Co. will require **full particulars** before arranging introductions to their clients. No charge is made to Purchasers.

NEWNHAM COLLEGE.—The Trustees of the Mary Anne Ewart Trust Fund invite applications from past or present members of Newnham College for a **TRAVELLING SCHOLARSHIP** of £150, for purposes of study, to be awarded in June, 1914. Applications must be sent, not later than June 10th, to Miss CLOUGH, Newnham College, from whom all particulars can be obtained.

Cambridge University Press

The Cambridge British Flora. Volume II.

By C. E. MOSS, D.Sc., F.L.S., assisted by specialists in certain genera. Illustrated from drawings by E. W. HUNNYBUN.

The publication of this new, comprehensive, and fully illustrated British Flora, which is to be completed in about 10 volumes, to be issued, so far as is practicable, annually, begins with Volume II, which is now ready. This volume deals with the earlier dicotyledonous families, thus including most of the British trees, as well as the Docks, Goosefoots, and Glassworts. The volumes are published in various styles at prices from £2 10s. net. A prospectus giving full particulars will be sent post free on request.

Précis-Writing. By W. MURISON, M.A. Crown 8vo.

In three parts. Part I, 2s 6d Part II, 3s Part III, 3s 6d

Designed to form a course extending over two or three years. Besides giving a general training in summarizing correspondence, reports and minutes, the series is intended to meet the requirements of the Oxford and Cambridge Schools Examination Board, Army Entrance, Civil Service, and similar examinations. A section on indexing has been added for those who require it.

Livy. The Revolt and Fall of Capua

(being selections from Livy XXIII-XXVI). Edited, with notes, vocabulary and maps, by T. C. WEATHERHEAD, M.A. Extra fcap. 8vo. 2s Cambridge Elementary Classics.

Notes on Elementary Inorganic Chemistry. By F. H. JEFFERY, M.A. Demy 8vo. 2s 6d net

Also published with blank pages interleaved. 3s net

Isaiah XL-LXVI. Edited by W. A. L. ELMSLIE, M.A., and J. SKINNER, D.D. Fcap. 8vo. 1s 6d net Revised Version for Schools Series.

A Text-book of Experimental Psychology.

With Laboratory Exercises. By CHARLES S. MYERS, M.A., M.D., Sc.D. Second edition. In two parts, bound in separate volumes. Part I, Text-book, with 1 plate and 24 figures and diagrams. Part II, Laboratory Exercises, with 42 figures and diagrams. Demy 8vo. 10s 6d net the two vols.

"The publication of the first edition marked an epoch in the history of the teaching of psychology. The edition just issued is probably the most complete text-book of experimental psychology in this or any other language. Every page is loaded with trustworthy statements of verified fact, yet the argumentation is so well ordered and the style so concise and clear that the book can be read with ease and pleasure. A bibliography of all the important monographs and articles upon the subject under discussion is appended to each chapter."—*Nature*.

Philosophy: what is it? By F. B. JEVONS,

Litt.D. Fcap. 8vo. 1s 6d net

One of the branches of the Workers' Educational Association expressed a desire to know what Philosophy is; thereby assuming that Philosophy is a concern of the average man, and of practical life. Of the truth of this view there can be no doubt, and this book consists of the five lectures which were given by way of an attempt, not so much to answer their question as to bring out the meaning of the question.

Elementary Logic. By ALFRED SIDGWICK. Crown

8vo. 3s 6d net.

Gives some account, for beginners, of both the old and new system. Logic is treated (1) as a carefully limited subject to get up for an examination; and (2) as a free study of the chief risks of error in reasoning.

The Literary Relations of England and Germany in the Seventeenth Century.

By GILBERT WATERHOUSE, M.A. Demy 8vo. 7s 6d net

STANDARD TEXT-BOOKS

AN IMPORTANT NEW SERIES.**BELL'S MATHEMATICAL SERIES****For Schools and Colleges.**General Editor: **WILLIAM P. MILNE, M.A., D.Sc.****First Four Volumes.***Crown 8vo. 1s. 6d.***PROBLEM PAPERS IN ARITHMETIC FOR PREPARATORY SCHOOLS.**By **T. COOPER SMITH, M.A.**

Late Scholar of University College, Oxford; Mathematical Master, St. Peter's Court, Broadstairs.

A varied collection of original and simple problems, specially designed to enlist the interest of pupils, through being selected from phenomena within their experience.

*Crown 8vo. With or without Answers, 2s. 6d.,
Answers separately, 6d. net.***ARITHMETIC.**By **H. FREEMAN, M.A.**

Sometime Scholar at Christ's College, Cambridge; Mathematical Master at the Haberdashers' Aske's School.

Written to meet the needs of teachers who wish a large and varied collection of practical arithmetical questions dealing with subjects within the pupils' sphere of knowledge, and covering the whole range of the secondary school curriculum. The moderate price has been rendered possible by the rigorous exclusion of all "padding."

*Ready Immediately. Crown 8vo. 2s. 6d.***STATICS. Part I.**By **R. C. FAWDRY, M.A., B.Sc.**

Sometime Scholar of Corpus Christi College, Cambridge; Head of the Military and Engineering Side, Clifton College.

Written to meet the needs of schools which teach Statics as an essential part of a general liberal education. The experiments on which the fundamental principles are based require only the simplest apparatus, and are specially adapted for classroom demonstration. There is a large collection of examples.

*Ready Immediately. Crown 8vo. 5s.***THE ELEMENTS OF NON-EUCLIDEAN GEOMETRY.**By **D. M. Y. SOMERVILLE, M.A., D.Sc.**

Lecturer in Mathematics, University of St. Andrews.

This volume is intended for students who are interested in one of the most important branches of modern geometrical thought. The position of Playfair's Axiom in a coherent scheme of geometry is discussed historically and critically, while the work of Lobatschewsky and Bolyai is dealt with in considerable detail.

Other Volumes in Active Preparation.**NEW AND RECENT BOOKS.****A CONSTITUTIONAL HISTORY OF ENGLAND.**By **GEORGE GUEST, B.A.**, Head Master of St. Paul's School, Bournemouth. *Crown 8vo. Illustrated. 256 pp. 1s. 6d.*

This volume aims at presenting a complete constitutional history, and is uniform with the same author's "Social History."

FRENCH SENTENCE CONSTRUCTION.By **MARC CEPPI and HENRY RAYMENT. Crown 8vo. 1s.**

An attempt to solve one of the difficulties encountered in teaching by the Direct Method—that is, the difficulty of getting free composition done fairly accurately. Pupils either think in English and translate therefrom, and are woefully inaccurate owing to having created for themselves difficulties which they are unable to solve, or, if they work honestly from their stock of French words and idioms, they lack a systematic plan for arranging their material. The aim of the lessons in this little volume is to remove these difficulties.

VIRGIL'S AENEID.

FOR THE MODERN SIDE.

By **H. H. HARDY, M.A.**, Rugby School. With an Introduction by Prof. **H. E. BUTLER**, University of London. *Crown 8vo. 2s. 6d.*

A volume of selected passages from the Aeneid worked up into a connected narrative by means of summaries in English. The Epic can thus be read as a whole and the story appreciated.

GEOMETRY FOR SCHOOLS.By **W. G. BORCHARDT, M.A., B.Sc.**, and the Rev. **A. D. PERROTT, M.A.** Complete edition. Just issued. *Crown 8vo. 4s. 6d.*Vol. I.—Introductory and Experimental, covering Stages I and II of the *Board of Education Circular, No 711.* 1s.

Vol. II.—Properties of Triangles and Parallelograms. 1s. 6d.

Vol. III.—Areas. 1s. Vols. I-III together. 2s. 6d.

Vol. IV.—Circles. 1s. Vols. I-IV together. 3s.

Vol. V.—Proportion. 1s. Vols. IV and V together. 2s.

Vol. VI.—Solids. 1s. 6d. Vols. I-V together. 3s. 6d.

ARITHMETIC.By **W. M. BAKER, M.A.** and **A. A. BOURNE, M.A.** *Crown 8vo. In Two Parts. 2s. each. With Answers Perforated.*

This edition of Messrs. Baker and Bourne's well-known Public School Arithmetic has been issued in two parts in accordance with requests from a large number of teachers.

BY THE SAME AUTHORS.

EXAMPLES IN ARITHMETIC.*Crown 8vo. 2s.*

This volume contains all of the examples and Revision papers from the above book, and has been prepared for use in schools where the bookwork is supplied by the teacher.

London: G. BELL & SONS, Ltd., Portugal Street, Kingsway, W.C.

FROM MR.
EDWARD ARNOLD'S LIST

A Class Book of Geography

By A. W. ANDREWS, M.A. 5s.

Nature.—"Mr. Andrews' textbook is particularly important from three points of view. He has paid special attention to climate, to maps, and to typical physical conditions. From the data which he supplies in reference to climate, the student who works through the exercises provided will have a definite and precise knowledge of the climatic facts of the world arranged in a systematic way. The numerous maps are appropriate and useful."

School World.—"A mine of information. Teachers should see this book."

Oxford Magazine.—"Marks a distinct advance on the ordinary textbook."

ARNOLD'S JUNIOR GEOGRAPHY. By W.

MACLEAN CAREY, M.A. B.Sc., Second Master of Rutlish Secondary School, Merton, S.W. 1s.

In this book the science of geography is presented in its relation to man, with special reference to the influence upon him of his physical and climatic environment, and with due emphasis on those facts which illustrate geographical principles.

Educational News.—"A capital textbook for pupils in secondary schools. Unlike so many books of this kind, it is no mere accumulation of facts to be memorized, but will lead the pupils to their atlases, and give them pleasure in using them."

OUTLINES OF PHYSIOGRAPHY. By A. J.

HERBERTSON, M.A., Professor of Geography in the University of Oxford. Fully illustrated. 2s 6d.

A new and revised edition of a popular book issued at a cheaper price.

Geographical Teacher.—"Distinctly the best book of its type we have read for many a day. . . . We recommend the book to all students of geography, and certainly to such as have to face examinations on physiography."

A GENERAL HISTORY OF THE WORLD.

By OSCAR BROWNING, M.A., formerly Lecturer in History in the University of Cambridge. xx + 700 pages. 5s. net.

Guardian.—"A work of real importance, remarkable for the skill of its condensation, and its true sense of proportion in outlook."

The A.M.A.—"In 800 pages Mr. Browning traces the world's story from the earliest times to 1910, with a vividness and charm of language that will make the book attractive both to the teacher and the taught."

Daily News.—"The text is a piece of brilliant arrangement, written, as is rare in school books, in the English language."

THE LAST CENTURY IN EUROPE, 1814-1910. By C. E. M. HAWKESWORTH, Assistant

Master at Rugby School. viii + 526 pages. 5s. net.

Oxford Magazine.—"A full, compact, and restrained narrative, and a scholarly presentation of *res gestæ* in the nineteenth century."

Journal of Education.—"If this book marks a beginning of a serious study of nineteenth century history in English public schools, its author has done a great service to its generation."

The A.M.A.—"We commend this book to the notice of all assistant masters. It has a most valuable index of some forty-two, closely printed pages, and should take its place as a standard work of reference."

THE ANCIENT WORLD. An Historical Sketch.

By C. DU PONTET, M.A., Assistant Master at Harrow School. With Maps. 4s. 6d.

Educational Times.—"The work, though based on well-known facts, may almost be said to be original, so fresh and penetrating are the collation and the interpretation of the events. It is a signally valuable book for readers of history, whether in or out of school."

Guardian.—"The story is admirably written, vivid in style, and interesting to read."

SCENES FROM EUROPEAN HISTORY.

By G. B. SMITH, B.A., Assistant Master at the Royal Naval College, Osborne. Price 2s. 6d.

Constructed mainly on the biographical plan, this book may be used as a companion to any English history textbook for the purpose of giving greater reality to matters of note in European History.

Secondary Education.—"Admirably fitted for the use either as a class book for older pupils or as the basis of an occasional lesson or lecture."

School World.—"The whole thing is exceedingly well done."

Please write for Catalogues.

LONDON: EDWARD ARNOLD, 41 & 43 MADDOX ST., W.

SCOTTISH SECONDARY EXAMINATIONS.

FOR the information of English educationists the evolution of the Leaving Certificate Examinations in Scotland has been already traced in articles which appeared in *The Journal of Education* in December, 1899, and in April, 1908. Since the latter date important developments have taken place in the direction of giving greater weight to the teacher's verdict on the pupil's work and attainment, and of providing a more simple and sensible arrangement of subjects for the Leaving Certificate, that so more freedom of curriculum might be possible in the later years of the secondary course.

For the secondary-school boy in a Scottish school there are two definite examinations, each with a double function. The Intermediate Certificate, obtainable at the end of the third (or fourth) year of the course, is meant to be evidence of a boy's fitness to proceed to the higher stages of secondary education, or, in the case of the pupil who has to leave school at fifteen or sixteen years, to attest that he has been carried satisfactorily through a three years' secondary course which has provided a well balanced and sufficiently varied selection of subjects suitable for a general education. The pupil who has gained his Intermediate Certificate and has continued his secondary studies may be presented at the end of his second (or third) Post-Intermediate year for a Leaving Certificate. The issue of this is intended not only to mark the satisfactory completion of a five (or six) years' secondary course, but also to attest fitness to enter upon University study. In actual practice 87 per cent. of the students who now enter the Scottish Universities are exempted from the Preliminary (*i.e.* Matriculation) Examination on the ground that they hold School Leaving Certificates covering the prescribed subjects.

The Intermediate Certificate as reorganized in 1906 is intended to be obtained at the end of the third year of the Secondary Course, but the nature and range of the examination is such that many pupils require four years. This extension of time seems unfortunate, as it is apt to reduce the remaining years of school life to two. It would be better educationally that of the six years (ages twelve to eighteen), which we may regard as normally available for the complete Secondary Course, the last three should be spent on the Post-Intermediate stage of the work. For the Intermediate Certificate there is a wide compulsory range of subjects—English (with History and Geography), Mathematics, Science, Drawing, and at least one language other than English, but excellence in one "may compensate for some degree of deficiency in another." No Certificate is granted or withheld without the consideration of the opinion of the teachers of the various subjects and the Head Master's judgment on the whole range of the candidate's work in school. These awards of the teachers are supplied to the Department before the written examination is held. The examination in all the subjects is on the lower standard. In Science it is entirely practical and oral; but in this subject, as well as in drawing, considerable weight is attached by the Examiner to the pupil's work done throughout the course. In Languages and in Mathematics there is both a written and an oral examination. In languages no texts are prescribed, a wise arrangement which makes for freedom in teaching, but is accompanied by the difficulty for the Examiner of setting papers that will not be unduly exacting.

Three years ago the Education Department, after lengthy and careful deliberation, recast the profession for the Leaving Certificate. The Department came to a final decision on the requirements only after the schools had each had an opportunity of submitting a scheme of courses that might be regarded as worthy of the award of a certificate. As far as any compromise can be acceptable, the official lines of recognition have met with general acceptance by the teachers. Among the Department's aims were the reduction of pressure on pupils at the Post-Intermediate stage and the provision, within reasonable limits, of greater freedom of choice of subjects of

study in the later years of school life. The certificate is now awarded on any profession which, as a minimum, includes higher English, higher Mathematics or higher Science, the higher stage of a language other than English, and a fourth subject studied satisfactorily to the end of the course, but not necessarily professed to the Higher Grade stage. All the subjects are examined on at the end of the course, both in writing and orally. The judgment of the teacher of each subject, as supplied in a schedule of marks for each pupil, receives careful consideration. The minimum list thus prescribed seems on the whole a very good formula for the solution of a very awkward problem. One of the difficulties to be met was the case of girls who did not continue Mathematics to the higher stage; these are now offered the alternative of higher Science. To what extent this is meeting the difficulty one cannot yet say. In addition to the above normal course, schools may submit special courses, with a different balance of subjects, specially suitable, for example, for boys entering industrial or business life or for girls who are not to train for a profession. All such schemes must receive Departmental sanction before they are entered upon. Naturally the tendency will be to scrutinize these carefully, lest they should become "cities of refuge for the weaker pupils." But the preservation in the official scheme of a niche for such variations from the normal is very desirable, as schools are thereby encouraged to solve the problem of higher education in the way best suited to the needs of their own areas and the desires of certain sections of their own parents.

The long delay of the Department in intimating the proposals for the Certificate as outlined above may have been partly owing to their desire to give to the Universities an opportunity to keep pace with their advance by an improvement of their Preliminary Examination; but, if so, they waited in vain. It is with regret that one has to record that the very reasonable demand made on the schools by the Department is not at the same time the minimum requirement for entrance to the Universities. That the normal type, at least, of Leaving Certificate issued by the Department should also be accepted by the Universities as a proof of fitness to enter on University studies is still a much needed reform. It is true that, as stated above, 87 per cent. of entrants into the Scotch Universities are exempted from the Entrance Examination because they possess the Leaving Certificate, but, to be accepted, such a Certificate must contain as a minimum (1) Higher English, (2) Latin or Greek, (3) Mathematics, and (4) another subject (e.g. Higher French, or Dynamics, or Practical Science). Of the three subjects named under (2) and (3) one must be higher, but the standard for either or both of the remaining two may be lower.

One naturally asks whether this profession is a better touchstone of intellectual discipline than the Department's minimum. He would be a very dogmatic man who would claim for it such superiority. But the stumbling-block in the way of the Universities' acceptance of the Department's prescription is that the latter have frankly discarded compulsory Latin or Greek, provided some other language is offered on the higher standard, whilst the Universities still cling officially to the belief that no man can be regarded as educated until he has obtained at least the slight modicum of classical knowledge that is indicated by a pass in Lower Latin or in Lower Greek. As a result of this view, the University position at present is that a schoolboy who has passed, for example, on the higher standard in English, in Mathematics, in French, and in German, is unfitted to enter on the studies of the Arts Faculty. But there are even worse anomalies than this among professional rules of recognition. In accordance with the regulations of the Medical Council, for example, a boy with passes in Higher English, Latin, Mathematics, and Practical Science is not fit to enter on medical studies; nor can he be accepted even as a veterinary or a dental student.

As a result of the Department's rearrangement several new subjects have now been admitted within the circle of higher grade studies. Among these are Music and Housecraft, but the range of study in these is wide and the standard of pass high. History and Geography, under the

new arrangements, continue to be an essential part of the examination in English for the Intermediate Certificate; but at the higher grade stage they have now been separated off from the paper in English, and are dealt with as independent subjects. The regulations demand that provision must be made for some instruction in history to all Post-Intermediate classes. If presentation on the higher grade in either History or Geography is to be made, each must have a reasonable amount of time, say four periods a week, devoted to it. One effect of this regulation has been to reduce greatly the amount of Geography and History instruction being given in the schools. A Committee of the British Association which investigated recently the subject of geographical teaching in Scottish schools has taken alarm, and in its report expresses the view that Geography should be made compulsory throughout the whole secondary course, and should receive at all stages a minimum of three and a quarter hours a week. One who knows the crowded time-table of a secondary school, however sympathetic he may be to the study of Geography, cannot read such a recommendation without a smile. The geographers, being specialists, are not hampered, like the schoolmasters, by having to consider any other subject than their own.

The course in each of these subjects must be submitted beforehand to the Department for its sanction. The same rule holds for drawing and science. The demand in the former has been greatly raised. The higher course must provide for instruction in one of two groups. The first includes Drawing, Painting, and Modelling, the work in one of the mediums being carried to a high standard. The alternative group consists of Drawing, Painting, with Design and Applied Art as embodied in suitable Art Crafts, and accompanied by some study of Architecture. Both groups are to include some knowledge of the history of Art. In Science the old arrangement of examining the school entirely on its own approved profession continues. The heuristic method is followed, and the freedom of the schools to draft their own schemes has, in the Intermediate curriculum produced, interestingly enough, a fairly uniform three years' course of practical physics and chemistry. For higher Science the widest freedom is allowed and encouraged. Even in the same school small sections of pupils may be specialized—some taking advanced physics or dynamics or chemistry, others some branch of botanical science, a specific biological investigation, or, for girls, the practical study in the laboratory of the chemistry of food-stuffs and articles of domestic use. As a rule, two Inspectors visit together, set relevant practical tests, and examine the note-books. The candidates are examined orally by each in turn, so that they may have the benefit of two estimates. The teacher's opinion also receives due weight. If any part of the profession is outside the ordinary range of equipment of the regular science inspectors, the Department do not hesitate to send an additional examiner, usually drawn from the staff of one of the Universities. Similar additional outside assistance in the examination of Drawing and of Music is made available. The general examination arrangements in all these subjects are conceived by the Department in a most liberal spirit, for which one has nothing but admiration.

The actual papers set in the written examinations on the whole merit and receive the approval of the teachers. There has been a continued progress on the part of the Examiners in their appreciation of what could be reasonably expected from school pupils, a more careful differentiation of higher and lower grade in languages, and generally, though varying by subjects and years, an excellent display of pedagogic skill and suggestiveness. Accompanying this has been a steady development in the method and usefulness of the oral examination. In no subject is this oral test now lacking. In the case of candidates for the Intermediate Certificate it seems to be used mainly as a means of testing the general reliability for the class as a whole of the Examiner's and the teacher's estimate. In the case of the leaving Certificate examinations it has in the last few years assumed a function of the very highest importance—that of settling doubt-

ful or, to use the Department's apt description, "marginal" cases. Where there is marked divergence between the place a pupil has on the teacher's list and on the examiner's there is a careful effort on the part of the visiting Inspector to determine which estimate should hold. No trouble is spared. The Inspector not only examines the candidate orally, but is prepared to go through his exercise books and to re-read his class examination papers for the year. The Department in the same way is ready to send on to the Inspector for his consideration on the spot the papers worked by the candidate on which the Department's award has been based. The Inspector hears the teacher's views for or against the pupil's pass, and in the light of all available data makes his final recommendation to the Department. But the system is not worked as a one-sided arrangement "for the rescue of brands from the burning." A candidate who on the strength of his performance in the written examination has obtained a bare pass may as a result of the oral test and a full consideration of the teacher's opinion be ultimately returned as failed. And this is right. It is perhaps even more important that the weak should not pass than that the strong should not fail.

Of special interest to teachers is a comparison of the teacher's estimate with the examiner's. The latest report on Secondary Education in Scotland quotes one of the Inspectors as saying: "In most schools the teacher's estimate was thoroughly reliable. When the result of the written examination did not agree with teacher's estimate, inquiry generally showed that the teacher's mark more fairly represented the value of the pupil's work. When the teacher's standard was not the same as the Department's—and it was nearly as often pitched too high as too low—the relative position of the candidates at all events was correctly given." Sir John Struthers adds: "While this happy experience was not universal, there is a consensus of opinion to the effect that the two standards are on the high road to an approximation that should ultimately be complete. This is specially true of the Higher Grade, where the correspondence is in some cases extraordinarily close, the two sets of marks in a large number of instances being either actually the same or within a very few units of one another." While there should be on the whole a general agreement between the teacher's assessment and the examiner's, it is perhaps right to indicate, from a teacher's point of view, that the Department may possibly be allowing themselves to put too much stress on the value of a very close correspondence between the two sets of marks. The use of two estimates is presumably to prevent good pupils from failing and weak ones from passing; in other words, there are pupils who will show better in an examination than they should, and another—and naturally more numerous—class who do worse than they deserve. It is clearly the teacher's duty to give credit to the steady industry that is producing sound knowledge, even if it is accompanied by some lack of speed, in the examination room, of brain or pen. Such a case will show, and ought to show, discrepant results.

To complete our account of the Scottish examinations, it remains to consider the question of the output of certificates in relation to the number of pupils under instruction. There is a difficulty in arriving at a sound judgment on this important point. The Scotch Education Department, unfortunately, is not alive to the need of giving us more copious secondary statistics and on a better arranged plan. The figures appear annually separated under different classes of schools in different parts of the Blue book, and, worse still, exhibited in different ways. Junior students (that is, a section of those preparing for the teaching profession) are dealt with separately from the secondary pupils. A good deal of desirable information is also quite lacking. To show the difficulty, such simple questions as the following cannot be answered directly from a study of the Department's Blue book: What is the total number of pupils taking the first year of a secondary course? How many the third? How many the sixth? How many pupils in Scottish schools are studying Greek, how many were presented for examination in a given year, and how many passed? How many pupils study German? How many Commercial Subjects? The simplest questions on organiza-

tion and curricula are similarly left unanswered. It is not that the Department do not possess all the data required. They have the figures available, but they make the mistake of keeping them to themselves. Doubtless this stifles a certain amount of ill-conceived criticism that might find annual expression, but it is not the best way to produce intelligent educators or a backing of well-informed public opinion.

To make what we can of the figures available, the number of Intermediate Certificates gained last year was 5,088, being 80 per cent. of those presented. This represents a great advance within recent years. For the past five years the numbers have been respectively 3,540, 4,093, 4,797, 4,761, and 5,088. Is this a satisfactory output? On the whole this question must still be answered in the negative. Somewhere about thirteen to fourteen thousand pupils annually enter on the work of the first secondary year. Is it sufficient that the Intermediate Course should be satisfactorily completed by five thousand of these? Many who begin fall off, and it is proper that there should be a good deal of leakage of this kind. Probably no good purpose is served by encouraging pupils of a secondary school to continue their attendance when they have reached the end of their aptitude. But five thousand winners out of fourteen thousand starters is not enough.

Does the same criticism apply to the Post-Intermediate pupils and the number of Leaving Certificates gained? The figures here seem to be satisfactory. One is glad to be able to record that the strictures passed on this point in 1908 are no longer applicable. The 725 passes then commented on have given place to the 1,739 of 1913. It is not possible, however, to speak with absolute assurance on the point, as one cannot from the figures supplied find out how many Post-Intermediate pupils there are, or what proportion of these are in the outgoing class. But the likelihood is that the leakage during the Post-Intermediate portion of the course is slight; that almost all of the outgoing pupils are presented, and (this on Blue book evidence) that 76 per cent. of those presented gain the Certificate. The conclusion seems to be that the examination is now in close relation with the product of the schools.

Regarding the examinations as a whole, it must be said that Scotland's twenty-five years' experience of the State inspection and examination of secondary schools has been a distinct success. The schools have doubled in number, equipment and staffing have been improved, the quality of the work being done has been greatly raised and its range extended. The examinations have been of especial value for the remoter and smaller schools. The benefit to these of having their pupils admitted to the same examination, to be judged by the same examiners and on the same standard as in the case of the largest and best equipped city schools, has been incalculable, and has been quite on the line of Scotland's peculiarly democratic outlook on higher education.

The Scotch Education Department may well congratulate themselves on the success that has attended their examination system in its contribution towards an ordered systematization of the nation's resources for higher education, and in the actual rise in efficiency of the individual schools examined. This success is in great part owing to the Department's own clearness of educational vision, persistence of aim, and cautiousness of advance, and has been greatly aided by the fine tradition of loyal service that actuates their official staff. In actual practice, as has been shown, the examinations have worked well; they have secured the confidence of the public and the teachers; and they have shown a steady forward movement and an absence of stereotyped rigidity that has made it possible for them to reflect readily the expanding educational ideal.

No one concerned with education can have regarded with other than keen interest the growth in England within recent years of the idea of a national system of education, in which would be found room for all the varied educational ideals and activities that accompany the diverse views that hold English minds on social, economic, and religious questions. With the growth of this idea the belief seems to be gaining ground

that some system of national examinations would better meet the needs of the secondary schools of England than the present multiplicity of tests of assorted standards and varying values conducted by divers authorities. The secondary problem in England is not only larger but essentially more complicated than in Scotland. Should public opinion, however, come to the conclusion that a national examination is desirable, then the quarter-century evolution of the Leaving Certificate Examinations in the sister country may well prove of interest as exhibiting in its history certain things to avoid and certain things to seek. The general success of such an experiment on a national scale cannot be regarded as other than encouraging.

W. J. G.

PSYCHOLOGY AND THE TRAINING OF THE TEACHER.*

By W. H. WINCH.

WHEN, some fourteen or fifteen years ago, I began in England to advocate that the methods of experimental psychology should be applied to the solution of pedagogical problems, I found myself—like all pioneers—in difficulties. Educationists said I was not really an educationist at all, but a psychologist. The wheel has turned full circle; for now it is often said that I am not really a psychologist, but an educationist. It is not, even yet, fully recognized in this country that it is just this combination of educational and psychological training which makes it profitable to undertake educational research, and which emboldens me to address you to-day on the subject you have selected.

Most of you will remember James's little book, "Talks to Teachers," written about that time. You know his position. I tried to counter it in my "Problems in Education," and I will try, very briefly, to make the issue clear. James said the general principles are what the teacher wants; he has no use for psychology of the brass-instrument variety. Well, James was not much of a pragmatist then, or he would have argued that principles are most elusive, most misleading, and, what is worse, most boring to the student, unless they have a big factual basis. The logical difficulty I need not press, for it is now admitted that a principle is, strictly speaking, nothing unless one knows the cases which come under it, and knows them, as it were, independently of the principle, from which, indeed, the principles are derived. The administrative difficulty still confronts us, and, for myself, I can only say that were I compelled to choose between a man of theoretical psychological knowledge only, and a man without that knowledge but possessing practical experience, I should certainly choose the latter. In one sense, too, James was wrong about brass-instrument psychology, for the analytical psychology of sensations has a place in the science, but he was right in intent; for when I went to America later on I found that psychology, as taught in the most advanced educational institutions, was just that laboratory psychology which James said, and I heartily agree, was not the psychology which could be of service to the teacher. The general belief in the practical value of this analytical psychology of sensations is, in my judgment, based on a conception of science which is in rapid decay. It is the old view of elements over again; once get the elements, and one can build up a whole world by combinations and inferences. The elements are the stable things; all else is flux, regular flux, because it is made up of combinations of the analytical things we know. So the implications run. I believe these propositions to be misleading, even for psychological science; they are certainly false in Child-Study; for we cannot build up our children's minds from the sensational elements of the laboratory; each mental state is *sui generis*; it is not merely an additive sum of elements.

* An Address to the Annual General Meeting of the Training College Association at Cambridge, March 21, 1914.

Of course we must have analyses, but we can't build up the child's mind from them by a process of addition, either simple or compound. And, for experimental purposes in Child-Study, it is a vital point that compounded processes, and what are usually called the "higher mental processes," are much steadier and more reliable than sensations and so-called elementary activities.

You will probably say that I am now at an impasse. I have rejected the mere principles, I have rejected the analytical psychology of sensation, whose home is the laboratory, not the school. What sort of psychology, then, do I want for the teacher? I want a short course full of cases and illustrations—indeed, built up from them, leading to a fairly satisfactory psychological terminology. May I quote a sentence from an article of mine in *The Journal of Education*, September, 1908? "The first thing," I said, "that the teacher wants is an easy analysis of his own mental experiences, to which his attention can be directed introspectively." Once more let me say what I do not mean. I refer you to a review of mine in *Mind* of "Das Seelenleben des Kindes," by Prof. Groos. It is a book for teachers, but enters into minute distinctions between psychological terms and into recondite and disputed questions of terminology which will leave the teacher gasping. The disputes of the psychological experts about names are nothing to him, and very often nothing to educational research. Who actually works, for example, with the difficult conception of Instinct? What we want to know is how far, so to speak, a child or young person will develop without teaching, and what differences, advantageous or otherwise, teaching makes; and we can do this quite well without entering into disputed questions as to instinct.

So much (or so little, for time presses) about the teachers' grammar of psychology—like all grammar, to be learnt functionally. What shall form the body of his psychology? This is now being built up—it has already attained considerable stature—in research work done under school conditions in America, in Germany, and to a lesser extent in England. Nor must we forget Binet's work in France nor that of the Belgian and Swiss workers. Characteristically enough, the German *Lehrerverein*, in its Institute for research at Leipzig, has launched into theoretical work, in direct antithesis to the aim of our new Research Society of London Teachers, whose intentions avowedly are wholly practical.

Two main lines of research provide the material for teachers. First, work in the evolution of the growing body and mind. This gives us much, and is most suggestive for educational theory. Suggestive, I say, not conclusive, for the determining issues for teachers rest with another and newer science—to wit, Experimental Pedagogy. Secondly, then, we must turn to the body of fact and criticism which is now growing up, in which we find the suggestions of psychology tested in actual practice as school methods. It is entitled in several ways, but the German term, Experimental Pedagogy, seems to me the best.

Now I will leave the high *a priori* road, and descend, or ascend, to the world's experience of the psychological preparation of teachers. We have it not, Germany has it not, but America has. I suggest to you to read O'Shea's article in the *Journal of Educational Psychology* on "Psychology in the Training College." The outstanding thing to me is that the teachers themselves say that psychology, as hitherto taught, has not helped them. Yesterday I asked a brilliant young teacher whether she found her training-college psychology helpful in her class work. She said she thought she might in difficult cases, but went on to say that up to the present she had had no such cases. I know teachers are hard to please, and I lay little stress on an opinion gathered here and there, but the consensus of opinion collected from American teachers cannot be lightly dismissed. There certainly seems good reason for trying new methods and new material in "psychology for teachers."

Who is to teach them? If we can get men and women with good academic training in psychology, who are also experienced and highly skilled teachers of boys and girls, we

should welcome them gladly. Such persons are ideal, but they cannot be very young, and the salaries offered in training colleges will not keep them away from positions in inspection and educational administration. I said "ideal," but not perhaps quite, for such persons should be trained in educational research rather than in purely psychological investigation; for though method does "transfer"—to use a term of which much more will yet be heard in educational disputes—it does not *wholly* transfer to changed material and changed conditions. The school has its own *milieu* and its own problems, and the methods of attack will of necessity differ.

Finally, let me say that I have painted the virtues of psychology in education in sober hues, as becomes one addressing expert educators. I am, indeed, not quite sure that it will not now suffer from its friends, as heretofore and always, of course, from its enemies. Some of those enemies are my friends, for I, too, am of opinion that the sort of psychology we have been teaching to teachers has failed, and I ask them to join with me in finding a more excellent way.

SOME OBSERVATIONS ON THE USE OF THE "RECKONING TEST" IN SCHOOL CHILDREN.

By GEORGE RUTHERFORD JEFFREY, M.D., F.R.C.P.E.,
F.R.S.E.

PROF. KRAEPELIN'S Reckoning Test is a test which affords an index to the working intellectual capacity. On account of its simplicity it is applicable to all grades of minds—normal and otherwise—and for this reason also is specially useful in testing the intellectual capacity of children. The Reckoning Test as used in this experiment was Prof. Maloney's modification of Prof. Kraepelin's Test. Maloney, by altering the spacing of the columns, the width of the margins, &c., produced a modification whereby the test was much more easily performed, and the various mechanical factors in it were greatly minimized.

Maloney's modification of Kraepelin's Reckoning Test consists of ten columns of figures arranged vertically from the top to the bottom of the page, and each column contains 21 units. Briefly the test is conducted as follows:—The person who is being tested is required to add the digits in pairs as rapidly as possible. To economize space, the method of continuous addition is employed; thus if, *e.g.*, the first five figures on the page ran as follows, 8, 3, 5, 7, 9, the digits added would be 8 and 3, 3 and 5, 5 and 7, 7 and 9. After a few seconds' warning, the test begins, and the time is noted. At the end of each minute the examiner calls "Stroke," and thus the number of units counted in any particular minute is known.

I selected for examination eighteen children—nine boys and nine girls—and divided them into three groups, those of bright intellect, those of average intellect, and those of dull intellect; each group consisted of three boys and three girls. The children were carefully chosen by the Head Master of St. Michael's School, Dumfries, and were all about eleven years of age, some a few weeks over, some a few weeks under eleven. The children were tested for fifteen minutes on five consecutive days, and under the same uniform conditions of quietness and surroundings. Even to children of eleven years of age there was no difficulty in performing the test. At that age they could all count, and further, as the maximum of any two units never exceeded 18, even the addition was of the simplest kind.

I shall now very briefly detail the results and observations which this test afforded. In placing the children in the three groups, bright, average, and dull, it must of course be remembered that, although a boy or girl may be said to be generally of bright, average, or dull intellect, as regards ability to count, or natural "gift for figures," this statement may be reversed, and hence the results in so few cases must at present

be viewed with caution. I was greatly impressed with the different way in which the children began the test. All of them were keen; they all showed a spirit of rivalry; but for the first day at least the attention of the girls was much more "sensitive," and throughout that day they exhibited a distinct restlessness, which in the boys was quite inconspicuous.

Rate of Working.

As regards rate, the bright boys were much better than the bright girls, the average boys not so good as the average girls, and the dull boys slightly better than the dull girls. These facts are, I think, in accordance with every-day experience: a bright boy is "smarter" than a bright girl, but an average boy is not so alert as an average girl, whilst there is little difference between a dull boy and a dull girl.

The total rate of all the boys was 19,717, in the girls it was 18,304; hence the boys worked more quickly than the girls, exceeding the total of the latter by 1,413. That the rate is capable of improving quite independent of the intellectual capacity is apparent, for all the children showed without exception a marked increase of the rate on the fifth day as compared with the first. The test, therefore, is probably of value in the education of children, by teaching them smartness and alertness in the addition of figures.

Improvability.

This was estimated by calculating the percentage difference on the work done between any two definite days. Between the first and second day of the test this averaged in the bright boys 49.1 per cent., in the average boys 28.2 per cent., in the dull boys 25.7 per cent. The boys of bright intellect clearly showed that they had very soon—on their first day practically—grasped the test, and on doing the test on the second day they at once showed great improvement. Between the first and fifth days all the boys were still improving. The bright boys still showed the largest improvement, *viz.*, 90.9 per cent.; the average boys reached 62.9 per cent., the dull boys 47.4 per cent. Hence at the end of the test all the boys showed that they were capable of great improvement, but, as was to be expected, those of bright intellect "reacted" best. Between the fourth and fifth day the improvement was very slight as compared with that between the first and second and first and fifth days. In other words, the maximum working capacity had been nearly attained on or about the fourth day, leaving very little room for improvement on the fifth day. Thus in the bright boys it averaged 2.4 per cent., in the average boys 2.3 per cent., in the dull boys 4.9 per cent. Hence a fact is at once apparent, *viz.*, that the dull boys, inasmuch as they showed more improvement at the end of the test than the others, are slower in working—slower in attaining or demonstrating their best.

Improvability in the Girls.

This differed in many ways from that of the boys. Thus, between the first and second day in the bright girls it was not so great—32.7 per cent. (instead of 49.1 as in the boys), a decrease of 16.4 per cent. Hence bright girls are possibly not so good as bright boys. The improvement in the average girls between the first and second days (32.3 per cent.) was practically the same as in the bright girls (32.7 per cent.), and exceeded that of the average boys by 4.1 per cent. The average girl therefore is slightly quicker than the average boy. In the dull girls the improvement between the first and second day was large; it reached 44.6 per cent., and exceeded that of the dull boys by 18.9 per cent., a further fact suggesting that dull girls are capable of more improvement than dull boys. Between the first and fifth days the dull girls showed the greatest improvement, *viz.*, 91.1 per cent., which was therefore greater by 43.7 per cent. than that of the dull boys who had shown an improvement of 47.4 per cent. In the average girls the improvement was 67.2 per cent.—less than in the dull girls, but greater than in the average boys by 4.3 per cent. (boys 62.9, girls 67.2). The bright girls, however, much earlier in the test showed their improvement, for

between the first and fifth days it was less than in the average girls (67.2 per cent.) or in the dull girls (91.1 per cent.), and was 58.9 per cent. as compared with 90.9 per cent. in the boys, who therefore showed an increase over the girls by 32 per cent. The bright girls showed less improvement than the bright boys, and also from this test it is apparent that girls of average and dull intellect are more capable of improvement—as regards figures, at least—than those of bright intellect. From the improbability we may further infer that bright boys are really better than bright girls, average and dull girls probably better than average and dull boys.

Errors.

The total number of errors in all the boys was 126, in the girls 134, and as the boys' rate of working was larger—19,717 compared with 18,304—the accuracy of the boys is somewhat better. The bright boys throughout the whole test had 21 errors, the bright girls 78, the average boys had 25, the average girls 10, the dull boys had 80, and the dull girls 46. Hence, bright boys as well as being quicker "workers" are more accurate, but girls of average and dull intellect seem to be more accurate than boys of average and dull intellect.

The nature of the errors was interesting, and generally it was found that in those children who had several errors these were of a definite and recurring nature; thus, *e.g.*, 9 and 7 were persistently called 15, instead of 16, 3 and 8, 12 instead of 11, &c. By recognizing these individual "flaws" in a child's counting powers the test is of infinite value, for by correction and practice these mistakes can be rectified, and apparently false associations can be broken down.

In conclusion, I have no hesitation in saying that the Reckoning Test is one which is of great value in the education of children. It improves their powers of counting and makes them alert; it improves their accuracy, no matter what their normal intellectual capacity is, and we get as a result increased alertness along with increased accuracy. Further, it is of immense value for detecting the various arithmetical flaws, acquired or otherwise, which exist in a child's mental mechanism, and by correcting and breaking down these false associations the education of the child is in this special department greatly helped. Lastly, I would like to say that this short experiment was done at the suggestion of Sir James Crichton Browne, who referred to my results and observations in his Presidential Address to the Child Study Association.

My best thanks are due to Mr. Hendrie, St. Michael's School, Dumfries, for his willing co-operation.

AT THE END OF SCHOOL LIFE.

By HARRY W. LEGGETT.

IT has become an axiom that education never ceases while life continues. For this reason it is difficult for teachers to reconcile themselves to the fact that at a certain stage each child in their charge will leave school. There seems to be no logical point at which "schooling" can cease. "Schooling" and "education" are not synonymous terms, of course. "Schooling" implies one kind of education—a more or less formal education. Life provides a different kind of education. It is education in the latter sense that can never cease. But there is no limit at which "formal" education may very well cease. Circumstances, however, determine that it shall cease at a certain point. At a certain point children are withdrawn from school. After that, formal education may continue in certain directions, but that is a matter that cannot be counted upon. The teacher has to face the fact that his or her task is strictly limited. How to reconcile this with the illimitable extent of knowledge, the illimitable growth of which individual character is capable, is a most difficult problem. It is impossible to deal thoroughly with this problem in a single article or even in several articles—possibly even in a volume or several

volumes. But there are a few considerations that may be put in the form of notes and so act as "pointers."

Schooling—the term is a useful one—is a means whereby individuals may rapidly be prepared for life. In a great majority of cases, the conditions of life entail that schooling shall be comparatively brief, and, further than that, that the life for which schooling is a preparation shall not allow of any great development in after years. That is to say, most children are destined to take a very modest part in life and personally to develop to no very high degree the faculties they possess. In elementary and secondary schools these children form the great majority. It is for these that such schools primarily exist. Among those that attend there is a minority who are capable of bigger things. But facilities are provided for these to obtain the higher education for which they are fitted. The teacher's main concern is with the majority. The teacher's object is to send this majority out into the world as well adapted to make the best of life as possible.

This means that school education must be "rounded off." Not exactly that a certain amount of knowledge must be circumscribed by the end of school life—that is almost an impossible task. By the present system, however, a child might leave school just as logically at eight or ten as at twelve or fourteen or even sixteen as far as education, apart from natural development, is concerned. What I mean is that he (or she) is no more prepared for the change in conditions that is about to take place at fourteen or sixteen than at eight or ten. He is simply more developed naturally. At fourteen or sixteen he ought to be in a far different position than merely that of having proceeded further in his studies than was the case at eight or ten. He ought to have arrived at a point at which he is able, to a considerable extent, to make use of his studies.

What are the qualifications of the ideal citizen? Surely, that he shall be able to perform his "ordinary avocations" efficiently, that he shall be able to exercise his right to a voice in national and international affairs judiciously, that he shall be able to employ his faculties to give himself the utmost possible satisfaction in living—that, in a word, he shall possess a well balanced character and well trained faculties. It is the task of the teacher to send into the world at the end of school life such individuals, while doing nothing to destroy individual characteristics; to give up at the end of school life children who are fit to stand alone. Possibly it is a fault of civilization in its present state that children—"young persons" according to the law's formula—should be left to stand alone, or with but occasional haphazard control by their superiors. The fact, however, is, and has to be faced. It is far and away the main concern of the teacher—or should be. The question of the age at which schooling ceases does not affect it. Where it is fourteen, or sixteen, or eighteen, or twenty even, the end of school means a break from a state of control to a state of little control.

It is the break that matters. There are two distinct methods of teaching a person to swim. You may throw him into the water and fish him out after a few struggles, repeating the process until he is efficient; or you may tie a belt round his waist, or in some other manner support him, gradually relinquishing assistance until he is efficient. You cannot teach him to swim by explaining the action of arms and legs, and then throwing him in and leaving him to his fate. Living efficiently is more difficult than swimming efficiently. It has been decided that the art of living is too difficult to "pick up," and everyone has to undergo tuition. But the form this tuition takes at present is very like explaining the motions of swimming to a person standing on dry land. Instead of all this elaborate explanation we should introduce the pupil into the new element with sufficient support to enable him to keep his breath, only gradually relinquishing him to his own devices as he can afford to do without support.

"Teacher" is not a fortunate word. I have used it to avoid the cumbersome "schoolmaster and schoolmistress." Yet teaching is only a small part of his or her duties. Ac-

quiring knowledge is only half the process of education. The other half is learning to make use of the knowledge acquired, and for this half school generally provides few opportunities. Children learn history and geography, but they do not practise using their knowledge of history to understand current affairs, or their knowledge of geography to send a parcel from, say, London to Berlin, or travel from Glasgow to Brighton. This is realized, and frequent endeavours are made to widen and make more "practical" the knowledge that is acquired. But this is not enough. To teach a child how to send a parcel from London to Berlin is helpful, but not sufficient. He may in actual life want to send parcels from London not to Berlin but to, say, Vancouver. It is necessary, not to teach, but to give children an opportunity at school of learning for themselves how to apply knowledge, how to acquire such missing items of knowledge as may be necessary in particular cases to use their knowledge practically.

The teacher's duty is to teach, part of the time, and assist the children in his charge to apply what they have learnt, part of the time. As school life proceeds the first part of a teacher's duty should diminish as regards the time devoted to it. The second part should increase in this respect, but diminish in degree. "Finishing off" consists, or should consist, of the withdrawal gradually of all assistance, so that during his last few months at school the child acquires nearly all the information he needs to carry out his tasks for himself, and applies his information to the requirements of his tasks for himself. As far as possible, he ought actually to correct himself (or, rather, his failures ought to serve him as corrections) instead of being corrected by the teacher. "Finishing off" in this sense is quite legitimate. Only by such means can education become "practical"—that is, adapted to the conditions of ordinary life, and not likely, therefore, to waste away for lack of use in a few years, as it does at present in most cases.

It is not easy to teach on these lines. It is very difficult indeed, in the first place, to construct a curriculum. Instead, for instance, of learning advanced mathematics, children would learn to use their arithmetic and elementary algebra for some of the multitudinous problems of business; their ability to draw oak-leaves for the purpose of designing a border for a calendar; their knowledge of physics to solving some domestic or local problem; their knowledge of geography to following the Chinese insurrection intelligently, and so on. At present they are set to draw a map of a country, to describe chemical elements and repeat physical laws, never encouraged to put their knowledge to practical uses, as they would have to do, if they used their knowledge at all, in ordinary life.

The work of the teacher would cease to be mechanical and call for higher powers. He could no longer trust to formal examinations, but to have no definite standard at all whereby to "place" each child would at first be very perplexing; the system of "marks" would have very little purpose. In the higher classes (it is only to the higher classes that these suggestions refer) class teaching would have to go by the board, and individual attention take its place. Without clear standards by which to work, the teacher would need far greater impartiality and caution than he has to exercise at present. But the cost is not excessive, if thereby we can alter schooling from what to most boys is a deadly grind to a substantial asset. And, after all, there is no need for a tremendous upheaval. The change of method must be brought about slowly. It is already beginning to take shape without, it seems to me, a very clear idea on the part of those responsible, of what the objects in view really are. If these objects were recognized, the change would be far more rapid and far more effective, and its results would disarm the prejudices of anti-utilitarians.

THE *Modern Language Review*, which is the only periodical in this country devoted exclusively to research work in Medieval and Modern Languages, is now in its ninth year. Prof. Fitzmaurice-Kelly has succeeded Dr. Oelsner as Editor of the Romance Section.

COLONIAL AND FOREIGN NOTES.

GERMANY.

If modern education has its faults, it is characterized by a laudable tenderness towards the abnormal and the weak, no less visible in Germany than in England. Berlin, for example, has its *Hilfsschulen*, or auxiliary schools, for children weak in mind, and in April the system of them was for the time completed with the establishing of the nineteenth. The organization of schools for children who hear imperfectly also makes good progress in the German capital. At present there are three special schools for such children: in the Brandenburgstrasse, in the Strassmanstrasse, and in the Gethsemanestrasse; to make adequate provision, a fourth will have to be built. If the family is poor, and the children have to go far, journey-money is paid for them. In various parts of Germany *Waldschulen* (forest-schools) flourish. A *Waldschule* may be described, after the German fashion, as a half-colony: its pupils migrate to it by day and return home in the evening. Duisburg has reversed the process. Its *Nachterholungsstätte*, or night-camp, for weakly pupils of primary schools, gives shelter by night near the town to those who, without it, would have to sleep in unwholesome rooms, and perhaps with sickly parents or brothers and sisters. It is only the midday interval that is spent at home; only the midday meal that is eaten there. After it the child goes to his school. The afternoon instruction over, he is off to the *Erholungsstätte*, where he drinks coffee, and does his little school tasks under supervision. The rest of the day is given to games and frolic in the neighbouring wood. For wet weather there is a hall; the weakest children receive the recumbent treatment (*Liegekur*). After a wholesome supper, all go to the beds, which, sixty in number, are arranged in two large, airy dormitories. In the morning the Sister (*Gemeindeschwester*), who, with two assistants, cares for the little ones, provides them with coffee and bread and butter, not forgetting to put a snack (*Schulfrühstück*) in every satchel. Invigorated, the boys and girls start for their several schools. And so for eight weeks the nights are passed in the pure country air, with an effect that you might realize if you sent frail London children to sleep in Epping Forest.

[By a deplorable error we reported the death of Paul Heyse last autumn. Our excuse is that we relied on what seemed to be a trustworthy telegram. The illustrious German writer is now really dead. We need not repeat the kindly words that we dedicated prematurely to his memory.]

FRANCE.

It is one of the great problems of life for all educators, whether parents or teachers—what is to be done with the big girls, when they have left school? The *Revue Universitaire* (xxiii, 3) gives some account of what is being done in France. It is common for the girls to be grouped in Associations of Old Pupils, and a central Union of such Associations stimulates generous rivalry among the constituent societies. They have their libraries; they write and circulate their Reviews; they study diction as well as the piano; they give concerts and *soirées*; they even make excursions in motor-cars. But their energy takes also the form of social beneficence. Thus the Association of Bourg has conducted a workshop, in which clothes have been made for twenty-eight children, whilst the Association of Besançon brings girls together, teaches them to cut clothes, gives them entertainments, with distributions of toys and garments, and sends the most delicate into the country to recruit. The Cercle Amical of the Lycée Molière promotes holiday "colonies"; and it can publish in its *Bulletin* the "Journal of a Hospital Nurse in Servia," a record of the experiences of a former pupil during the second war in the Balkan peninsula. At Rouen the Old Girls have organized a Kindergarten. The interest of the past in the present schoolgirl has been shown at Besançon, Coutances, and Nantes by the foundation of scholarships in the local *lycées* for girls.

Howlers, of the genuine sort, are slippery things to catch; but you may catch them in various waters. If it was an American boy that translated—it is palmary among such blunders—"a war-horse" by "un hors de combat," it was a French candidate in the last examination for the Agrégation de l'enseignement secondaire des jeunes filles (Lettres) who turned Tennyson's "And o'er his head the Holy Vessel hung" (the Vessel being the Holy Grail) by "Sur sa tête le bateau sacré se balançait"—a rendering which has its merits. By the way, the Germans, if they make "howlers," do not, so far as we know, collect them. And what is the German for "to make a howler"? Is not "einen Bock schießen" too mild a phrase?

It is not for us here to compare the merits of foreign and native teachers of languages. A well educated Englishman whose French is guaranteed by a French University should easily find employment. The University of Lille offers such guarantees in the shape of a Diplôme d'études françaises, open to those who attend special courses diligently for one-half year, and a Diplôme supérieur pour l'enseignement de la langue et de la littérature françaises à l'étranger, after a year of study. Candidates for either diploma must be regularly matriculated or inscribed on the books of one of the Faculties. A fair knowledge of French at the outset is to be assumed.

Statistics, odious to some, have for others a continual fascination. We exhibit this month statistically what may be called the structure of the student-world in France—a matter, it must be remembered, relevant to the progress of civilization. The figures show how that student-world was constituted on January 16 in the present year.

	MEN STUDENTS.			WOMEN STUDENTS.			In all.

UNITED STATES.

The great summer meeting of the National Education Association will be held, July 4-11, at St. Paul, Minnesota, at which time the State University Department of Agriculture has arranged also to hold a summer session. The proceedings of the N.E.A. Department of Superintendence at Richmond in the closing days of February were of singular interest. Of the resolutions formulated, the first declared the public schools to be the foundation of the American form of government and the bulwark of democracy. The second, significant of the general trend of modern educational opinion, we print verbatim. "Resolved: That we endorse the movement to establish and support vocational schools for pupils over fourteen years of age; that we urge the special preparation of teachers for this vocational work; that we encourage the establishment of continuation schools for boys and girls between the ages of fourteen and eighteen years who have entered vocational life; that we recommend that the attendance upon these continuation schools be made compulsory for such boys and girls between the ages of fourteen and sixteen."

**The N.E.A. ;
an Important
Resolution.**

In England the Unionist Committee on Social Reform, it will be remembered, has declared for obligatory continuation up to the age of seventeen; nor would the reform, cautiously introduced by means of local option and stages, be found too drastic. And would it not be possible to offer grants, dependent on the adoption of a stage of compulsion within a specified time? Parenthetically, a grateful word to Mr. Pease for his effort to fathom these matters for himself. Side by side with this demand for continuation, there is to be observed in the United States a rapid growth of the movement for vocational education in the secondary school. The *School Review* (XXII, 3) unfolds some details. Lansing, Michigan, has adopted the "part-time plan," and has fifty boys working in pairs, half their time in the high school, the other half in the workshop. In Columbus, Ohio, the merchants are urging the School Authorities to adopt similar plans. Rock Island, Illinois, reports a winter course of three months for carpenters' apprentices, in which the boys learn mathematics and architectural drawing in addition to woodworking. Woodward High School, of Cincinnati, has a machine tool department, in which the pupils are taught the art of making tools. Road-building is being instituted in the district schools under County Superintendent Salmon, of Frankfort, Indiana. To the other evening courses in the East High School of Waterloo, Iowa, is added this year a course in the study of the gas engine. Webster City, Iowa, incorporates in her city school system a night school of engineering, free to all persons of school age. The School Board of Portland, Oregon, has drawn up plans by which a complete course in printing, with an expert printer in full charge, will be organized in the Jefferson High School. In Los Angeles, California, efforts are on foot to give instruction in shipbuilding and in clay industries. Lawrence, Massachusetts, has established courses in steam engineering, under the Chief Engineer of the Arlington Mills.

Baltimore, according to a German book of reference, is famous because one-third of its inhabitants are Germans; it is more justly famous as the seat of the Johns Hopkins University, a home of learning made illustrious by such professors as Basil Gildersleeve, Paul Haupt, and Wilfred Mustard, of whose admirable "Eclogues of Baptista Mantuanus" a notice was accidentally omitted from this journal. President Remsen retired two years ago, and of late the business of the University has been in the hands of an Administrative Committee. It is now announced that Dr. Frank J. Goodnow of Columbia University, at present political adviser to the Republic of China, has been chosen as the new President of Johns Hopkins. He is a Law Professor in Columbia, absent in China on a three years' leave. The University Report (January 1914) shows Johns Hopkins receiving some interesting gifts and bequests. The Grand Duke of Saxe-Weimar presented to it a bust of Goethe. One benefactor endowed a research fellowship in urological surgery; another provided a fund to be expended in books for the study of English. Mrs. Francis White, of Baltimore, gave a large Bible formerly belonging to the mother of the founder of the University, in which are entered the dates of the birth of Johns Hopkins, his parents, and their other children. The University keeps true to piety in the old as well as in the best modern sense.

**Johns Hopkins
University.**

CANADA.

The Ontario Minister of Education's Report for the year 1913

**How fares
Ontario?**

records "satisfactory progress both in the elementary and secondary schools and in those related branches of educational work, such as public libraries, schools for deaf and blind children, &c., the control of which is assigned by law to the Department of Education." Public interest in education, fostered by the method of local administration, is keen; the inhabitants of the Province are even overcoming the traditional Anglo-Saxon reluctance to pay teachers, and the Minister shows that salaries have increased in five years by 192 dollars in the case of men teachers, 123 dollars in the case of women. The system of continuation schools has been extended. Of the 6,094 pupils in such schools during the year under review 46 per cent. came from the farm—a class of pupils which grows year by year. An Inspector of Continuation Schools writes thus: "There is spreading, with the fervour of a religious revival, an educational movement to give vocational training to those young men and women who, for various reasons, have left school at an early age and are engaged in industrial pursuits or in the work of the home. It is one of those movements that marks an epoch in the educational history of a country. A few years ago only an occasional voice was heard as of one crying in the wilderness; but to-day the whole public conscience is alive to the necessity for, and the justice of, this work."

Continuation schools in Ontario are classified as secondary schools. Of secondary schools, in the common sense, there were 148 in 1912, with a total expenditure of close upon 2,000,000 dollars. The provision of special equipment for such subjects as manual training, household science, agriculture and art is a notable feature in connexion with them—serving as they do the children of every element of the population, and affording an education which qualifies for any career. Ontario is proud of the splendid buildings of these high schools and collegiate institutes and of their well-trained and capable teachers. We trust that we shall not be accused of blood-thirstiness if we express our joy at the prosperity of the cadet movement in the Province. The full strength of the various corps is set down as 8,525; the number present at inspection as 7,949. The reports of the inspecting officers were generally favourable, often laudatory.

**Of her Secondary
Schools.**

QUEENSLAND.

Fifty years ago boys and girls in Queensland picked up most of their education after they had left school. **Characteristics.** The address of the Minister of Public Instruction at the Twenty-sixth Annual Conference of the Queensland Teachers' Union affords an indication of the progress that is being made. The expenditure on education, he said, was rising steadily, and the amount voted for the current financial year was about £675,650. And progress was being made under distinctive forms. Queensland, with its great distances, vast empty spaces, and bewildering potentialities and prospects, had its special problems to solve. Hence some characteristic features of the educational system of the State—its travelling teachers, its Nature-study with an agricultural bias, and its peculiar adaptation of medical inspection. Of travelling teachers, seventeen were at work, and motor-cars were enabling them to conquer distance. Nature-study, as it was pursued, aimed to turn country boys into country men, and even to draw some of the city boys countrywards. Medical and dental inspection was more comprehensive than in other lands: Queensland had, for example, fly-screened schools and special ophthalmic centres, whilst the itinerant teachers carried with them the means of treating milder cases of eye disorder.

INDIA.

The Sixth Quinquennial Review (1907-12) of the progress of education in India begins with a statement of the policy of the Government. **Policy of the Government.** The formation of character is the main objective; hence stress will be laid on direct moral and religious instruction, whilst such indirect agencies as the grouping of students in hostels are to be fostered. Education, free and compulsory, India is not to have. "For financial and administrative reasons of decisive weight," says the report, "the Government of India have refused to recognize the principle of compulsory education; but they desire the widest possible extension of primary education on a voluntary basis. As regards free elementary education, the time has not yet arrived when it is practicable to dispense wholly with fees without injustice to the many villages which are waiting for the provision of schools." As more trained teachers become available, primary and secondary

'DUSMO'

The Dustless Sweeping Powder

A TESTIMONIAL FROM BANGOR.

I want for this College 6 cwt. of DUSMO, 5 cwt. for uncarpeted floors and 1 cwt. for carpets. I find it MOST EXCELLENT, and should be glad if you could send what I require, or anyhow some of it, as soon as possible.

The removal of dust prevents the spread of infection. — Keep your School healthy by the use of 'DUSMO.'

**PRACTICAL.
EFFICIENT.
ECONOMICAL.**

'DUSMO' can be used any and every day of Term. The Schoolroom is available immediately ; there is no tedious drying or 'dusting' to wait for.

'Dusmo' is the cleanest, quickest, and most economical sweeping powder for effectively freeing your school from dust. *Dust simply can't exist where 'Dusmo' is used.* It is manufactured in two forms—'Dusmo' for use on carpets, and 'Dusmo' 'B' especially prepared for use on wood, linoleum, stone or marble floors. 'Dusmo' contains no oil or grease, and is disinfectant.

**DUST CANNOT RISE.
THE FLOOR IS SCOURED.
RESULT: A CLEAN SWEEP.**

The 'Dusmo' method *absolutely* prevents the dust from rising *and removes it.* When the accumulated dust has been absorbed the quantity of 'Dusmo' used daily is very small, and the cost would be even *cheaper than sawdust.* The old method of using water or damp sawdust coagulates the dust, leaving it sticking to the floor to return to dust again when dry.

DUSMO COMPANY, LTD.,

**11 QUEEN VICTORIA ST.,
LONDON, E.C.**

education will be diverted, by means of manual training, outdoor observations, and so forth, to more practical ends. In the field of higher education, it is desired that provision should be made to enable the young Indian to pursue his studies and do research work without having to go abroad.

The impression that the Review produces makes for hopefulness. There is in it a frank recognition of the difficulties to be overcome and of the disparity of the conditions in various parts of India. As to education free and compulsory, that is a development not to be effected by ukase, but to be reached when public opinion in favour of it is ripe and when careful economic preparation has been made. But education in India should still receive continual and close attention from the Government. Our wish is that Britain, conscious of her imperial rights, should also remain no less mindful of her imperial duties.

Philips' New WALL ATLAS OF MODERN HISTORY

Edited by Professor Ramsay Muir, M.A., and George Philip, F.R.G.S.

A series of eight attractively coloured Wall Maps designed to illustrate those great changes in Political Geography which have characterized the main periods in the modern history of Europe.

By the insertion of essential names only and the use of strong colouring for the political features, the maps are rendered beautifully clear. The Wall Atlas forms a supplement to the School and Students' Editions of **Philips' Historical Atlas**.

LIST OF MAPS.

1. **EUROPE ABOUT 800 A.D.**, to illustrate the relation to the ROMAN EMPIRE of the FRANKISH EMPIRE of CHARLEMAGNE, the EASTERN ROMAN EMPIRE, and the SARACEN EMPIRE. 72 miles to 1 inch.
2. **ROMAN BRITAIN**, 16 miles to 1 inch. **ANGLO-SAXON ENGLAND** in the Heptarchic period, 16 miles to 1 inch.
3. **EUROPE IN THE AGE OF THE CRUSADES**, 72 miles to 1 inch.
4. **MEDIAEVAL ENGLAND AND WALES**, with part of SCOTLAND, 16 miles to 1 inch. **ENGLAND IN FRANCE**, 32 miles to 1 inch, with an Inset Map of France in 1429, 64 miles to 1 in.
5. **EUROPE AT THE TIME OF THE REFORMATION**, 56 miles to 1 inch.
6. **NORTH-WESTERN EUROPE**, illustrating the Politics and Wars of the XVII and XVIII Centuries, 24 miles to 1 inch, with an Inset Map of the Waterloo Campaign, 8 miles to 1 inch.
7. **EUROPE UNDER NAPOLEON**, 1810, 56 miles to 1 inch.
8. **ENGLAND IN 1700**, BEFORE THE INDUSTRIAL REVOLUTION, 16 miles to 1 inch. **ENGLAND IN 1911**, AFTER THE INDUSTRIAL REVOLUTION.

Size of each Map, 45 by 36 inches.

Separately, mounted on cloth and varnished, with rollers	...	each	5s. net.
Set of Eight, mounted as Wall Atlas, on cloth, with roller	35s. net.
Separately, mounted on cloth and dissected, with brass eyelets for hanging	...	each	5s. net.

PITMAN'S SHORTHAND TEACHERS' JOINT EXAMINING BOARD.

President—ALFRED PITMAN, Esq.
 EXAMINATIONS for the Shorthand Teacher's Diploma of this Board are held in the principal cities of the United Kingdom throughout the year. The Diploma is recognized by County Councils and other important Educational Authorities as the highest possible testimony to a Teacher's ability and its possession is, therefore, of the utmost value to Teachers seeking appointments. The Diploma is specified as a qualification by the Department of Technical Instruction for Ireland. Full particulars of the examination, together with a copy of "HINTS TO CANDIDATES," may be had, post free, from the
 EXAMINATIONS SECRETARY, PHONETIC INSTITUTE, BATH.

MR. JOHN MURRAY

A JUNIOR CHEMISTRY.

BY W. D. ROGERS.

F.I.C., B.Sc. (Hons. Lond.), A.R.C.Sc. (Lond.), Chemistry Master, Grove Park School, Wrexham.

Specially prepared to cover the course needed for the Junior "Locals" and similar Examinations. With numerous Diagrams, 3s. 6d.

A thoroughly sound course of experimental chemistry on modern lines, based throughout upon laboratory work.

THE CHEMISTRY OF THE GARDEN.

A Course of Practical Laboratory Work for Teachers and Students of Horticulture, Gardening, and Rural Science. By D. R. EDWARDS-KER, B.A., B.Sc., Head of the Chemical Department, South-Eastern Agricultural College, Wye. 1s. 6d. net.

NEW AND ENLARGED EDITION.

THE REALM OF NATURE.

An Outline of Physiography. By H. R. MILL, D.Sc., LL.D., Director of the British Rainfall Organization. Second Edition. Revised and entirely reset. With 19 Coloured Maps and 73 Illustrations in the Text. 5s.

"We are very pleased to welcome the new edition of this deservedly popular manual. . . . Many sections have been entirely rewritten and all of the numerous maps and diagrams have been checked. The concise and clear style of writing which characterises Dr. Mill is excellently exemplified in this volume, and it should solve the difficulty of the choice of a textbook for physical Geography."—*Educational Times*.

A "MIDDLE METHOD" GERMAN COURSE.

Reading-Book and Grammar with Direct Method and Re-Translation Exercises. By F. W. M. DRAPER, B.A. (Cantab.), L. ès L. (University of Paris), Assistant Master at the City of London School. 2s. 6d.

Each subject is treated on a double page. It consists of three parts—(1) The narrative; (2) Word-groups; (3) Oral Questions. Beside this, there are several carefully graduated exercises on each reading lesson, and a tabulated grammar appendix, to which constant reference is made throughout. The systematic teaching of composition and grammar is an important factor in the method of the book.

THE ROMANCE OF NAMES.

By ERNEST WEEKLEY, M.A., Professor of French and Head of the Modern Language Department, University College, Nottingham. 3s. 6d. net.

"We welcomed his book on 'The Romance of Words,' and we are equally glad to have its companion 'The Romance of Names,' which is at once entertaining and scholarly. It does not make the mistake of giving us too much."—*Athenæum*.

MADAME

BERGMAN ÖSTERBERG'S PHYSICAL TRAINING COLLEGE, DARTFORD HEATH, KENT, FOR RESIDENT STUDENTS.

The College, the first of its kind in England, was opened in 1885, with the view of training educated women as Teachers of Scientific Physical Education.

The Course of Training conducted by a large and competent staff of teachers, extends over two years. It includes the study of Anatomy, Physiology, Hygiene, Anthropometry, and Theory of Movement. In practical subjects instruction is obtained in Ling's Swedish Gymnastics, Dancing, Outdoor Games, and Medical Gymnastics and Massage. At the end of the Course, examinations are held and certificates of theoretical knowledge and practical efficiency in teaching are awarded to successful students.

The College, which provides 50 separate bed-sitting rooms and several large studies, is situated on very high ground, gravel soil, on the confines of an extensive heath, half an hour from town. It stands in its own fine grounds of fourteen acres, which contain an Outdoor Gymnasium, Running Track, Cricket and Hockey Grounds, Lawn Tennis Courts. The Indoor Gymnasium, 70 ft. by 35 ft., and the Medical Gymnastic Room, 50 ft. by 25 ft., lofty and well ventilated, are fitted up in the most perfect style, all the apparatus having been designed and executed in Stockholm.

The immediate neighbourhood offers over one thousand children for the students' practice as teachers.

Hundreds of posts have been obtained through this College, a list of which is to be obtained with the Prospectus.

Students admitted in September.

For particulars apply—THE SECRETARY.

MADAME

BERGMAN ÖSTERBERG'S UNION OF TRAINED GYMNASIAC TEACHERS.

Ling's Swedish System.

Aim of the Union: To advance the cause of Physical Education on scientific lines.

In placing members of this Union as Teachers in Schools, careful and discriminating choice is exercised, and the exact requirements of each School specially considered.—PHYSICAL TRAINING COLLEGE, DARTFORD HEATH, KENT.

BELL'S NEW AND

BELL'S ENGLISH HISTORY SOURCE BOOKS.

Joint Editors: S. E. WINBOLT, M.A.; KENNETH BELL, M.A., *Fellow of All Souls College, Oxford.* Crown 8vo. viii+120 pp. 1s. net each.

- 449-1006. **THE WELDING OF THE RACE.** By the Rev. JOHN WALLIS, M.A.
1006-1154. **THE NORMANS IN ENGLAND.** By A. E. BLAND, M.A.
1154-1216. **THE ANGEVINS AND THE CHARTER.** By S. M. TOYNE, M.A.
1216-1307. **THE GROWTH OF PARLIAMENT AND THE WAR WITH SCOTLAND.** By W. D. ROBIESON, M.A.
1307-1399. **WAR AND MISRULE.** By A. A. LOCKE.
1399-1485. **YORK AND LANCASTER.** By W. GARMON JONES, M.A.
1485-1547. **THE REFORMATION AND THE RENAISSANCE.** By F. W. BEWSHER, B.A.
1547-1603. **THE AGE OF ELIZABETH.** By ARUNDELL ESDAILE, M.A.
1603-1660. **PURITANISM AND LIBERTY.** By KENNETH BELL, M.A.
1660-1714. **A CONSTITUTION IN MAKING.** G. B. PERRETT, M.A.
1714-1760. **WALPOLE AND CHATHAM.** By K. A. ESDAILE.
1760-1801. **AMERICAN INDEPENDENCE and the FRENCH REVOLUTION.** By S. E. WINBOLT, M.A.
1801-1815. **ENGLAND AND NAPOLEON.** By S. E. WINBOLT, M.A.
1815-1837. **PEACE AND REFORM.** By A. C. W. EDWARDS.
1837-1856. **COMMERCIAL POLITICS.** By R. H. GRETTON.
1856-1876. **FROM PALMERSTON TO DISRAELI.** By EWING HARDING, B.A.
1876-1837. **IMPERIALISM AND MR. GLADSTONE.** By R. H. GRETTON, M.A.

- 1535-1913. **CANADA.** By JAMES MUNRO, M.A.
A SOURCE BOOK OF LONDON HISTORY. By P. MEADOWS, M.A. 1s. 6d. net.

BELL'S SCOTTISH HISTORY SOURCE BOOKS.

- 1697-1688. **THE SCOTTISH COVENANTERS.** By J. PRINGLE THOMSON.
1680-1746. **THE JACOBITE REBELLIONS.** By J. PRINGLE THOMSON.

These volumes will be followed by others dealing with Scottish History.

WESTERN EUROPE.

By B. L. K. HENDERSON, M.A., D.Litt., *Haberdashers' Aske's School.* 2s.

It is hoped that this volume will meet a need which has long been felt in the middle forms of secondary schools, namely, the requirements of the Board of Education with regard to European History. An attempt has been made to deal with some of the great phases of Continental development. While it is, perhaps, impossible to carry out successfully a chronological arrangement, yet some heed has been given to the progressive march of events.

THE ENGLISH NATION.

Social and Industrial History. By P. MEADOWS, M.A., *Haberdashers' Aske's School.* 2s.

A clear and straightforward account of the development of the English nation in those respects which most closely concern the common life of the people. The value and importance of the industrial and social aspect of our history is becoming more and more recognized, and there seems to be every reason why it should take its place as a definite subject of class instruction.

ANCIENT HISTORY FOR SCHOOLS.

From the Earliest Times to the Death of the Emperor Augustus. By E. NIXON, *Late Head Mistress of Junior School, Ladies' College, Cheltenham;* and H. R. STEEL. With 29 Illustrations and 7 Maps. 2s.

THE BUILDING OF THE BRITISH EMPIRE.

A Reading Book for Schools. By E. M. RICHARDSON, B.A., *St. Saviour's and St. Olave's Grammar School.* Second Edition. With 22 Illustrations and 10 Maps. 1s. 6d.

A CONSTITUTIONAL HISTORY OF ENGLAND.

By GEORGE GUEST, B.A., *Head Master of St. Paul's School, Bourne-mouth.* Crown 8vo. Illustrated. 266 pp. 1s. 6d.

This volume aims at presenting a complete constitutional history, and is uniform with the same author's "Social History of England."

Fcap. 8vo. With Biographical and Critical Introductions, and Glossaries where necessary. Strongly bound in cloth, 6d. net.

BELL'S SIXPENNY ENGLISH TEXTS.

Edited by S. E. WINBOLT, M.A., *Christ's Hospital, Horsham.*

Teachers of English nowadays want short, well-printed texts which will stand wear and tear, and which are published at a price which makes it possible to change them frequently. Messrs. Bell think that the volumes of this series will be recognized at a glance as exactly fulfilling this purpose.

*Poems by John Milton.—*Spenser's "Faerie Queene," Book I.—*Poems by Tennyson.—Selections from Byron.—*Macaulay's "History of England," Chapter III.—Gibbon's "Decline and Fall," Chapters I to III.—Selections from Pope.—Poems by Gray and Cowper.—Plutarch's Lives of Caesar and Cicero.—Plutarch's Lives of Themistokles, Perikles, and Alkibiades.—*English Elegiacs.—*Selections from Chaucer.—Kingsley's Heroes.—Irving's Sketch Book (Selections).—Macaulay's Lays of Ancient Rome.

* Also issued, interleaved, at 1s. each, bound in cloth boards.

+ Also issued with Notes; specially suitable for Cambridge Locals. 1s.

REPRESENTATIVE PASSAGES FROM ENGLISH LITERATURE.

Chosen and arranged by Professor W. H. HUDSON. Crown 8vo. 2s. 6d. net.

"This companion to the author's 'An Outline History of English Literature' is very sensibly arranged. . . . A wonderfully varied and satisfying scheme of literary illustration."—*School World.*

EXERCISES IN ENGLISH.

Including Dictation, Reproduction, Analysis, Parsing, Classification, Synonyms, Meaning of Words, &c., with Explanation of Methods, and Grammatical Terms. By FRED. W. BEWSHER, B.A. 1s. net.

This volume, though it is in itself a complete book, is intended to serve as a second part of "Aids to the Writing of English Composition."

A PRACTICAL COURSE IN ENGLISH.

By E. J. BALLEY, B.A., *Whitgift Grammar School, Croydon.* 1s. 6d.

Designed to give the pupil a practical understanding of his mother-tongue and the use of it. The Second Part forms a generous compendium of Exercises in Analysis, Construction, Correction of Errors, turning Direct Speech into Indirect, and also a Set of Local Examination Papers in Grammar and Composition.

A FIRST ENGLISH GRAMMAR.

By the Rev. J. E. W. WALLIS, B.A., *Christ's Hospital.* Strongly bound in cloth. 1s.

This book, based on the recommendations of the Joint Committee on Grammatical Terminology, is designed to give the "irreducible minimum" of English Grammar in as clear a manner as possible.

RHYMING THIRDS.

Story in Verse and Prose by the Boys of IIIA and IIIB. Edited, with an Introductory Essay, by W. L. PAINE, *Whitgift Grammar School, Croydon.* 1s. net.

These stories in verse and prose are written by the boys of the two parallel classes in which secondary education begins. The subject of the poems are mostly taken from ancient legends, and both prose and poem have the simplicity, verve, and originality that, free from the shackles of discipline, constitute real artistic expression.

RECENT BOOKS.

BELL'S FRENCH PLAYS.

(Based on Gombert's French Drama.)

Edited, with Introduction and Notes, by MARC CEPPI, *Whitgift Grammar School, Croydon*. Fcap. 8vo. Paper Covers, 6d. Cloth, 8d.

Each play is equipped with an introductory note in English, giving the history of the play and a critical appreciation with a list of dramatis personæ in French, an argument, also in French, outlining the course of the action, given at the beginning of each scene, and concise notes in English at the end of the volume.

FIRST VOLUMES NOW READY.

Molière: *Le Tartuffe*, *L'Avare*, *Le Misanthrope*.—Racine: *Les Plaideurs*.—Voltaire: *Zaïre*.—Corneille: *Le Cid*.

Other Volumes will be issued at short intervals.

SENTENCE EXPANSION.

Leading to Free Composition in French by the Direct Method. By MARC CEPPI and HENRY RAYMENT. 1s.

This little volume is an attempt to solve one of the chief difficulties encountered in teaching by the Direct Method—that is, the difficulty of getting free composition done decently and fairly accurately. Pupils either think in English and translate therefrom, or, if they work honestly from their stock of French words and idioms, they lack a systematic plan for arranging their material, and the aim of this volume is to remove these difficulties.

BELL'S FRENCH PICTURE CARDS.

THIRD SERIES. 1s. 6d. net per set.

Twelve cards (7 × 4½ inches), each one of which contains three scenes from a story. They are thus specially adapted for use as materials for composition.

"The drawing and colouring are alike good . . . Mr. Adair has shown excellent judgment in supplying the text. These cards will be found very useful indeed."—*School World*.

A PRIMER OF PRACTICE ON THE FOUR FRENCH CONJUGATIONS.

By HENRIETTA M. ARTHUR. 6d. net.

This little primer is chiefly intended for those students—young or old—who have a more or less imperfect acquaintance with all the four conjugations. Therefore, although only one tense is dealt with at a time, the conjugations are taken simultaneously, in order that the learner may see at a glance that, for the most part, the same characteristics of tense and person mark all the four conjugations.

PŌNS TĪRŌNUM.

A First Latin Reader. Illustrated. With Summary of Grammar Exercises and Latin Vocabulary. By R. B. APPLETON, M.A., and W. H. S. JONES, M.A., both of the *Perse School, Cambridge*. 1s.

This is a fourth-term book on the Direct Method, the object of which is to teach the regular Latin syntax by means of a very simple narrative, in the different sections of which the construction in question is, wherever possible, "rubbed home" by the style of repetition familiar to all in the story of "The Old Woman who went to Market to buy a Pig." At the same time, it is hoped that the narrative has not become tedious.

OLIM.

A Book of Easy Latin Plays. By EFFIE RYLE, *Classical Mistress at Aigburth Vale High School, Liverpool*. 1s.

"Olim" is a small book of Latin plays and dialogues, written in the hope that it may help to make Roman "Antiquity" real, and may be used as a supplementary reading book for the second or third year of Latin.

THE SHORTER AENEID.

Selected and Arranged with Brief Notes by H. H. HARDY, M.A., *Rugby School*. With a Preface and Introduction by Professor H. E. BUTLER. Crown 8vo. 2s. 6d.

"Mr. Hardy has done his work well, and in the result has produced a sequence of passages which cannot but impress those who read them with a sense of the unity and purpose of the poem."—*Morning Post*.

BELL'S MATHEMATICAL SERIES

For Schools and Colleges.

General Editor: WILLIAM P. MILNE, M.A., D.Sc., *Clifton College*.

PROBLEM PAPERS IN ARITHMETIC FOR PREPARATORY SCHOOLS.

By T. COOPER SMITH, M.A., *late Scholar of University College, Oxford; Mathematical Master, St. Peter's Court, Broadstairs*. 1s. 6d.

A varied collection of original and simple problems, specially designed to enlist the interest of pupils, through being selected from phenomena within their experience.

ARITHMETIC.

By H. FREEMAN, M.A., *sometime Scholar at Christ's College, Cambridge; Mathematical Master at the Haberdashers' Aske's School*. With or without Answers, 2s. 6d. Answers, 6d. net.

Written to meet the needs of teachers who wish a large and varied collection of practical arithmetical questions dealing with subjects within the pupils' sphere of knowledge, and covering the whole range of the secondary school curriculum. The moderate price has been rendered possible by the rigorous exclusion of all "padding."

STATICS. Part I.

By R. C. FAWDRY, M.A., B.Sc., *sometime Scholar of Corpus Christi College, Cambridge; Head of the Military and Engineering Side, Clifton College*. 2s. 6d.

Written to meet the needs of schools which teach Statics as an essential part of a general liberal education. The experiments on which the fundamental principles are based require only the simplest apparatus, and are specially adapted for classroom demonstration. There is a large collection of examples.

THE ELEMENTS OF NON-EUCLIDEAN GEOMETRY.

By D. M. Y. SOMERVILLE, M.A., D.Sc., *Lecturer in Mathematics, University of St. Andrews*. 5s.

This volume is intended for students who are interested in one of the most important branches of modern geometrical thought. The position of Playfair's Axiom in a coherent scheme of geometry is discussed historically and critically, while the work of Lobachevsky and Bolyai is dealt with in considerable detail.

MATHEMATICAL PROBLEM PAPERS FOR SECONDARY SCHOOLS.

By C. DAVISON, M.A., Sc.D., *Mathematical Master at King Edward's School, Birmingham*. 2s. 6d.

The collection of problem papers included in this volume is intended for use in the middle and some of the upper classes of a secondary school, the questions being confined to arithmetic, plane and solid geometry, and elementary algebra and trigonometry. Many of the problems are original, but the majority have been derived from series of examination papers set in various colleges and schools.

ARITHMETIC.

By W. M. BAKER, M.A., and A. A. BOURNE, M.A. In Two Parts. 2s. each. With Answers Perforated.

EXAMPLES IN ARITHMETIC.

By the same Authors. 2s.

A FIRST NUMERICAL TRIGONOMETRY

By W. G. BORCHARDT, M.A., B.Sc., and the Rev. A. D. PERROTT, M.A. 2s. 6d.

JUNIOR TRIGONOMETRY.

By the same Authors. Crown 8vo. 3s. 6d.

An enlarged edition of the above book, containing chapters on Identities, Equations, and compound Angles, will be found suitable for such examinations as the Cambridge and Oxford Junior Locals, First Class College of Preceptors, Additional Mathematics of the Central Welsh Board, Oxford and Cambridge School Certificates, Scotch Leaving Certificate (Higher Grade), and the Lower Examination in Pure Mathematics of the Board of Education.

OCCASIONAL NOTES.

THE Pension Scheme recommended by the Departmental Committee of the Board of Education follows the lines which have generally approved themselves to the associations of secondary and technical teachers. They suggest that the pension funds should be formed by the joint contributions of Local Authorities or Governing Bodies, as the case may be, and the teachers themselves. Ten per cent. on each salary is the proportion recommended, and no teacher should be called upon for more than half that amount. Insurance policies of the ordinary kind should be taken out with approved companies, and a Central Committee, consisting of representatives of the teachers and the Authorities, should be formed to negotiate with the companies, prescribe the terms of the policies, and make any arrangements that may be necessary for the continuance of the policies when teachers move from one school to another. The Committee rightly regard it as of the first importance that no hindrance should be placed on the free circulation of masters and mistresses. The schemes already in force under certain Local Authorities—there are only nine of them—might be sanctioned, if they are good enough, but every teacher should have the option of insuring under the universal scheme. In addition to the insurance scheme, the Committee suggest that the Treasury should give a superannuation allowance of £1 for each year of recorded service, the same amount as that given to elementary teachers. The combination of deferred annuity and retirement allowance would, the Committee anticipate, supply at least the £100

demanded by secondary and technical teachers as an adequate minimum—that is, they ought to have added, if the annuitants have been paid a moderately good salary throughout their career. The badly paid teachers will, we fear, have a meagre pension. The Joint Pensions Committee of the Federal Council have approved in general terms of the scheme.

THERE are two points in the scheme which will, we expect, excite considerable discussion. The first is that no benefits will be realizable under the age of sixty, except in case of disablement, or, for women, in case of marriage. Thus, if a man leaves the profession or sets up a private school, his contributions will not be returned. He will simply have his policy, and can choose between paying the further premiums out of his own pocket or taking at sixty such benefits as have accrued during his service. Some teachers will probably argue that the man's contributions are his own savings, and he should be able to do what he likes with them. We think, however, that the Committee are right. If people are helped by public funds to obtain an annuity for old age, the State has a right to require that they should make provision for that eventuality. The second point is the employment of insurance companies, as against the formation of a State fund. The Committee were divided on this subject—three against two, and one of the latter was Lord Farrer. His objections seem to us to have considerable weight, and we hope that the point will be fully considered by the Government before a scheme is proposed.

WE must refrain from traversing the arguments by which it was reached, but must place on record the conclusion of the Salaries Committee of the Secondary Education Association of Scotland. "Uniformity of payment as between men and women teachers is at present impracticable, but the disparity at present existing between salaries paid to men and women for the same work should be diminished." Nowhere is this disparity more marked or less defensible than in the salaries and conditions of tenure for men and women Inspectors under the Board of Education. Will not Mr. Pease have the courage to initiate this pressing reform?

THE Committee justly remark that "the establishment of a system of State pensions for teachers in secondary and other schools will necessarily mark a stage on the road which will lead to the recognition by the State of persons as qualified to teach in those secondary schools which are in receipt of grant." We should like to translate this unwieldy sentence into a briefer and simpler formula: No unregistered teacher shall be eligible for a pension. Again, the Committee are puzzled about the date at which the service which should count for the superannuation allowance is to begin. With the elementary teacher it begins when he gains his certificate and is recognized as a competent teacher, but there is no such moment in the life of a secondary or technical teacher. Here again the answer to the riddle is simple: Service should be counted from the date of registration, or, if at that time the teacher is unemployed, from the date of his entry on the duties of his next post.

MR. LLOYD-GEORGE promised a host of good things for education in his Budget Speech, but we must wait till next year for the fruition of his hopes.

Education and the Budget. This year we are to have only an additional grant to aid in the feeding of children and more help for necessitous areas. The latter help will be of a substantial value, though the scheme will by no means fully solve the problem of how best to aid the poor and progressive communities. The Chancellor's proposal is that, in addition to the whole of the excess expenditure over the product of a 1s. 9d. rate, half the excess expenditure over the product of a 1s. 6d. rate shall be met by grant. This is a modest step forward; but, even under this plan, rich Eastbourne and Bournemouth will still pay 6d. in the £, while poor Tottenham and Ebbw Vale will pay 1s. 9d. But the scheme is evidently intended for this year only, and therefore need not be too rigidly scrutinized. Next year there will be large readjustments of grants and rates. The general principles of the Kempe Committee—that the greatest measure of relief should be given to the poorest districts, and that to those who spend (or, at least, to those who spend efficiently) shall be given—have been accepted; but for the Board of Education's scheme for carrying them out we must still wait.

Additional Grants. NEXT year additional grants for many special objects are promised. Health figures largely in the forecast. Lord Beaconsfield's war cry of "Sanitas sanitatum, omnia sanitas" was not very successful at the time of its utterance, but is becoming a watchword with this generation. Grants for health work, physical training and open-air schools, grants for schools for deformed children, cripples, and the feeble-minded, grants for schools for mothers—all this is money that will be spent in building up the bodily frames of the rising generation. Further, there will be additional grants for assisting the higher education of promising children, and finally a grant in aid of a pension scheme for secondary and technical teachers, so as to attract the best men and women to this important branch of the profession, says the Chancellor. We are glad that statesmen are beginning to recognize that it is useless to open the doors of the higher schools to the children of working men unless you provide capable masters and mistresses to teach them.

The External Student. THE *Toynbee Record* for March has a spirited defence of the Royal Commission Report on the University of London, and acquits the Commissioners of any hostility to the private student. They contemplate, it is true, the ultimate disappearance of a separate examination for unattached students, but not till such time as the reform they suggest shall have put a University education within the reach of all fit to receive it. "External students," it is pointed out, include several wholly distinct classes. First come students and graduates of provincial Universities who desire to attach or add the London hall-mark. As these Universities rise in public estimation this class will disappear. Then there is a most deserving class, the elementary teachers who, by help of Correspondence Colleges and the like, obtain in increasing numbers a London degree. But the establishment of day training departments at most of the Universities points to a time when every elementary teacher

may aspire to a degree as an internal student. A small residuum is left of men who toil all day at the desk or in the workshop, and burn the midnight oil; and it is for these that the cry of robbing the poor man of his degree has been raised; but their case will be met if the proposal of the Commission is carried out, and Birkbeck College becomes a "school" of the University, organized so as to give all the necessary training for a degree in evening classes. We may add that this class generally care little for a degree or diploma, as is proved by the experience of the Workers' Educational Association. To most of these students knowledge is its own reward, and all they ask is provision for advanced study under competent direction.

Audi alteram partem. IN the *Contemporary Review* for May Mr. Holford Knight fights the battle of the External side of London University. Its value, he holds, is proved beyond all reasonable contention by statistics of those taking its examinations on the External side. If we want further testimony of its value, Sir Oliver Lodge, Dr. Clifford, Mr. H. G. Wells, and other worthies in every walk of life did not consider themselves demeaned by sitting for these examinations. If this is the best defence that can be offered, the plaintiff need hardly reply.

Certificate of Religious Knowledge. WE would call the attention of teachers and intending teachers to the Certificate of Religious Knowledge awarded by the University of London, the examination for which is held this month. It is open to all candidates who have attained their twentieth year. The examination consists of six papers, four in compulsory and two from a group of optional subjects. There are two papers on the Old Testament, one testing a general knowledge of the whole and the other a detailed knowledge of a portion varying from year to year, and two similar papers on the New Testament. The optional subjects are (1) Greek Testament (a selected portion), (2) a period of Church History, (3) History of Christian Worship, (4) Christian Ethics, (5) Philosophy of Religion, (6) Comparative Study of Religions. What specially interests us is the regulation of the Senate: "No question shall be put so as to require an expression of religious belief on the part of the candidate, and no answer shall be objected to on the ground of its expressing any peculiarity of doctrinal views." The University of London thus demonstrates what Oxford and Cambridge have persistently denied, that it is possible to test religious knowledge apart from questions of creed or sect. Were heads of schools to require such a certificate from all their assistants who undertake to give Scripture lessons, we should not hear the complaints of the ignorance and apathy of scholars that formed the key-note of recent conferences on Biblical teaching.

The Kinematograph. EVIDENCE continues to pour in on us from Oxford and elsewhere of the pernicious effects, both physical and moral, of the picture theatre on children and the need of a strict censorship. On the other hand, the *Bioscope* records a successful experiment tried by the Manager of Pyke's Kinematograph Theatre in the neighbourhood of London. Pathé's films on educational subjects, such as Electricity, Insect-eating Plants, the Harvest of the Sea, are screened weekly at a stated hour—one for boys and one for girls—and the pupils of the schools who subscribe

are prepared to profit by the exhibition by lectures previously given in school, and required afterwards to write notes or essays on what they have seen. At present only private schools have profited by the opportunity, but we see no reason why L.C.C. schools should not be allowed to profit likewise.

MR. G. F. DANIELL, the Chief Examiner for London County Council Scholarships, has issued his report. He is much pleased with the result of the last examination, and, on the whole, not without reason. All the examiners are agreed that the writing of English has improved very much during the last few years and that the candidates show more imagination and creative faculty than they used to do. The standard of work in arithmetic is declared to be remarkably high for children of eleven, and one assistant examiner remarks that a Civil Service paper recently set to boys of fourteen was no harder than the scholarship paper, and the percentage of marks gained no higher. Such a verdict, however, needs to be looked at in more ways than one. If the facts be really as stated, then either the boys of fourteen had been taught too little or the boys of eleven had been taught too much. What we should like to know is how much special preparation these youngsters had had for the examination and whether other subjects had been sacrificed to practice in arithmetical problems. One examiner, indeed, thinks that the correctness in writing English has been paid for. "This precocity," he says, "may be due to emotional under-feeding" (a vile phrase, by the way, for an examiner in English); and the inevitable tendency of these scholarship examinations, with their limited range, is to discourage the study of other and equally important subjects.

MR. DANIELL sets a high value on "the three R's." "When a large proportion of the population can use these instruments," he says, "the nation is recognized as a civilized one." This is a new use of the word "civilized," and if we accept it we must deny the epithet to all nations of antiquity and date civilization from the invention of printing. We believe as thoroughly as Mr. Daniell does in "the three R's" as a necessary part of education, but let us beware of thinking that they constitute the whole of even an elementary education. There is a side of the child's life and mind which they do not touch, namely, the active working side. Education is preparation for life, and the humblest education should include the acquirement of some capacity for gaining a livelihood. That is a doctrine which we are only just beginning to learn, but which is coming more and more to the front. We have already practically confessed that we began education for the masses at the wrong end when we began with the mind, instead of the body. Slowly we are recognizing that side by side with a literary and scientific education, and as far as possible interwoven with it, must go a workshop education.

THIS principle is applied at present chiefly where the waifs and strays of our civilization are concerned. All boys and girls in industrial schools are taught a trade, and when they leave they are put in the way of earning their living. A large number of children have no doubt owed their salvation to having committed some petty offence.

The Examination
for L.C.C.
Scholarships.

"The
Three R's."

Craft
Teaching.

We train our vagabonds to be skilled workmen, while we let our respectable children drift into blind-alley occupations. The young thief is brought up to be a bootmaker or a tailor; the honest lad becomes a van-boy. But the change is coming. The trade schools in London and elsewhere are doing well. The question of training for the sea is being pressed forward. Plymouth Education Committee are considering the possibility of establishing day schools with a nautical bias. The Higher Education Sub-Committee of the London County Council have, indeed, reported against special schools for sea training, on the ground that the prospects of continuous employment at sea for boys are not good enough, but they think that the question of giving a "nautical bias" to an elementary or central school should be considered. The natural technical school, to which the pupils of such a school would pass on, would be a sea-going training ship, and we hope before long to see some historic seaport launch such a vessel. Schools with a nautical bias, like schools with an agricultural bias, are all very well, but the only real school for seamen is the sea, just as the only real school for farmers is the land.

THE *Spectator* has recently discovered education, and we hope that it has found the discovery profitable. A recent number contained an article on a number of works on education, and schoolbooks, written by a reviewer who is not a teacher—at least, so we should judge from his description of the "Piers Plowman Histories" as "designed for the borderland between nursery and schoolroom." The criticism of the well informed layman on things educational is, or ought to be, always useful to teachers, who fall so easily into grooves of educational thought. Our reviewer notes the tone of violent one-sidedness in books on the Montessori method and co-education and the exaggerated belief in the efficacy of some particular prophylactic. It was ever thus with teachers. A generation ago making Latin and Greek verses was the remedy for all the ills that mind is heir to; now it is doing something with one's hands. Educational reformers seldom succeed in bearing in mind the complexity of human nature. With the reviewer's remarks on the uselessness of barren "Jeremiads" we are fully in sympathy, and, like him, we find Mr. Stanley Leathes's breadth and sanity more helpful than sermons on the text, "Whatever is or has been in education is wrong." Finally, we note the *Spectator's* demand for practical natural history in schools. It is a difficult question. Natural history can, properly speaking, be taught only in the open air by those who have a first-hand knowledge of Nature and have lived amongst birds and flowers. Such teachers are not easy to find, and so for the open-air observation of plants and animals we substitute book-learned botany and zoology taught indoors. The study of Nature and Nature-study are two entirely different things.

THE Elementary Education Sub-Committee of the London County Council have drawn up a report on the question of the teaching of the facts of sex in Council schools. They are of opinion that under no circumstances should the teaching of "sex hygiene" in elementary schools be approved. They fear that the breaking down of the child's natural modesty and the stimulus given to undesirable talk would do more harm than the knowledge

Teaching in
matters of Sex.

given would do good. But they think that much good might be done by teachers talking privately to children, especially to those suspected of bad habits, and by the head teacher speaking to the elder children before they leave school. What is more important still, they think that boys and girls in the adolescent stage need definite guidance, and that the subject might be dealt with in evening institutes. The report is a valuable one, but to our mind it lays insufficient stress on the moral and spiritual sides of the question, which ought never to be separated from the physical and intellectual aspects. The very title, "Sex Hygiene," implying as it does that the preservation of health is the main object to be aimed at, carries a wrong suggestion.

WHAT will strike most readers of Canon Lyttelton's article in the *Hibbert Journal* on public-school education is the extreme modesty of the claim which he makes for the great foundations, over the most famous of which he presides. All he asks us to admit is that the social life of a public school fosters the disposition to give and take, tolerant understanding, insight, adaptability to new surroundings, and independence of rules. We are quite ready to allow this; with some reservation, however, about the public-school boy's "tolerant insight" where his social inferiors are concerned. But are we justified in asking no more than this from the public schools? Are we to acquiesce in the position that they need do nothing for a boy's brains? When Canon Lyttelton approaches that question he puts all the blame for the failure of the schools on to society and the national life. He claims credit, that is, for the success of his school; he declines responsibility for its weakness. Surely this is not a very worthy position to take up. Certainly the home is a most potent factor in the forming of a boy; but we had always thought that it was the business of the school to supply those elements in which the home environment was lacking, and of these intellectual training is the most conspicuous.

HIDDEN away in the folds of Mr. Denman's quite unpretentious School Attendance and Employment Bill, as reported to the House by the Standing Committee, is the first hint of the principles on which the coming system of further education will probably be based. Clause 7 of the Bill empowered Local Authorities to make attendance at continuation classes a condition of exemption from school attendance after thirteen. To this a sub-clause was added in Committee which will prevent a child's being employed for more than eight hours a day in work and school combined. Thus, if an Authority requests the young persons under its charge to attend school for three hours twice a week, the employer will not be able to keep them at work on those days for more than five. The Authority is also empowered to settle the periods during which they are to attend school after consultation with the employer. The limitation of the hours of labour is thus accepted as a necessary condition of school work during adolescence. The case of theatre children, for whom we had a word to say in our last issue, has been considered, and the duty of issuing licences transferred from the magistrate to the Local Education Authority—another sign of the growing tendency to entrust the whole supervision of child life to one set of Authorities. Travelling companies will not

need to get a fresh licence in every area. The children with such companies are always a bugbear to rigid officials and pedantic educationists; but travelling is a sort of education in itself, and children who travel have many advantages over those who never leave the back streets of Whitechapel.

THE belittling of modern times in schools takes many strange forms, and one of the strangest surely is the view that modern history is lacking in the "picturesque." The authors of the Board of Education's "Suggestions for the Teaching of History" say that "there is much more of the picturesque in the ancient Briton and his woad, in William falling as he landed at Pevensey, in the Battle of Hastings, in the doings of the Black Prince, of William Wallace, and of Joan of Arc than in the incidents of more recent centuries." What exactly "the picturesque" means is hardly definable, but we confess that we cannot understand the mind of the man who finds William falling as he landed more picturesque than Nelson putting the telescope to his blind eye. Nor can we see that the Battle of Hastings is one whit more picturesque than the Battle of Waterloo, or that De Wet and Botha need yield the palm to William Wallace. In other fields, what advantage has even Columbus over Scott, or the founder of St. Bartholomew's Hospital over Florence Nightingale, or Augustine over Livingstone? It is a shallow view that finds nothing striking in what is near at hand. "Picturesque," as used in the circular, appears to refer principally to clothes. A man is "picturesque" if he wore armour and carried a lance; he is dull if he dressed in a plain coat and trousers. It is regrettable that the teachers of young children should be advised to concentrate their attention on the early ages; they are far too much inclined to do that already.

THE world has not outgrown the need for Symbolism; we do not think that it ever will. The English are supposed to be a plain and very practical, humdrum, people; but the English want symbols and colour and show, something that will make a direct appeal to the emotions, as much as any nation, as the history of religion and the history of royalty in recent generations alike prove. But even if the world outgrows the need for symbols the child never will. It is this which gives its importance to Empire Day. Rightly used, it should be the means of impressing upon the future generations of voters a sense of their responsibility to the Empire, and the Empire's responsibility to mankind. To the statesman and the moralist alike it should be a matter of concern that children be made to feel that political power is not given to us merely that we may get as much as possible for our own class. We would add that there is a fine chance for someone to immortalize himself by writing a song for Empire Day. It must be simple in language and sentiment, crisp, terse, and not obtrusively didactic, and the tune must go with a swing. But national songs are harder to write than great tragedies—at least there are more good tragedies than good national songs.

MR. G. B. SHAW, with his usual modesty, has sandwiched between two of his plays a serious "Treatise" on parents and children. It is, he teaches us, no less a mistake to regard the child as a "trailing cloud of glory," like Wordsworth ("one of the successes of the

Canon Lyttelton
on
Public Schools.

First Hint for a
Continuation
School System.

Empire
Day.

Mr. C. B. Shaw's
Pedagogics.

Almighty" is the Shavian phrase), than to treat him as conceived in sin, like the theologians. He resembles rather "the harmless, necessary cat," and must be allowed to go his own way and be punished if he offends, not because he is vicious, but to prevent him from making himself a nuisance. For the parent to set himself up as an authority and attempt to train children in his own image is the grossest form of egotism. All he is entitled to say is: "I am older than you, and therefore the odds are slightly in favour of my knowing better." Stripped of paradox, this is simply the doctrine of Rousseau and his disciple Dr. Montessori, the doctrine of "Emile" without the "Savoyard Vicar." It seems to us a half-truth, but parents and pedagogues alike may take to heart Spedding's wise epigram:

The only thing old people ought to know best
Is that young people ought to know better.

LOCAL AUTHORITIES.

Middlesex :
Teachers' Salaries. THE Middlesex Education Committee has adopted a series of recommendations regarding teachers' salaries which will come into operation on October 1. In the case of head teachers the minimum scale is to be in future £170 to £210, while, in the case of head mistresses, schools with over fifty-one scholars in average attendance will be ranked in the second grade, the minimum salary being £110, rising to £150 per annum. In schools with more than one Department the Committee may, if it is thought desirable, appoint a senior head teacher, with a view to co-ordinating the work of the different departments. The Committee also proposes to recognize two grades of certificated assistant teachers. Grade A will consist of a number not exceeding 25 per cent. of the total of certificated assistants employed. The salaries of these assistants will rise to a maximum of £200 in the case of men and £150 in the case of women. The salaries of teachers in Grade B will be in accordance with the present scale. These modifications are estimated to involve an ultimate increase of £6,985.

Bradford :
Educational Continuity. AN interesting return has been prepared by the Director of Education for the City of Bradford, showing the number of children proceeding directly from (a) elementary to secondary and evening schools, and (b) secondary schools to places of higher education and evening schools. In 1913, 673 children from elementary schools (191 of whom paid fees) went to secondary schools, and, of 3,804 who did not proceed to secondary schools, 1,844, or 48.5 per cent., continued their education in evening schools. From the secondary schools 83 were admitted to places of higher education, while of 337 who left the schools 221, or 65.5 per cent., proceeded to evening schools. A scheme has been adopted to give English teachers of modern languages in secondary schools an opportunity of attending approved Modern Language Holiday Courses abroad at least once in three years. In accepting the resignation of Prof. Barker, of the Technical College, a resolution was passed regarding the Committee's appreciation of the valuable services which he has rendered to the College during the twenty-one years he has acted as Head of the Textile Department, and offering their congratulations to him on his appointment to the Chair of Textile Industries in the University of Leeds.

Lancashire :
Equality of Opportunity. Now that secondary education is largely supported out of the rates, there is much to be said in favour of placing the fee-paying parent who resides at a distance from a school in the same position as those whose children can attend without travelling. The Lancashire Education Committee have now decided to pay the actual travelling expenses of all pupils over ten years of age attending secondary schools. It is estimated that an additional expenditure of £1,200 per annum will be incurred, as there are about eight hundred junior exhibitors and four hundred other pupils who will benefit.

THE Warwickshire Educational Committee have had under con-

Warwickshire :
Cost of Buildings. sideration the question of the cost of new school buildings, and finds that thoroughly satisfactory and well built schools are being erected in Worcestershire at a small cost. The expenditure, it is stated, varies from £8. 11s. 6d. to £9. 4s. 1d. per school place, as compared with £12. 11s. to £14. 17s. 3d. for schools recently completed in Warwickshire. The reduced cost in Worcestershire, the Report says, appears to have been reached by taking advantage of relaxations of the Board of Education's requirements and by carefully supervising all details so as to cut out all unnecessary work. The Worcestershire costs are certainly extremely low, and it may be doubted whether the result has been obtained without economizing in certain particulars which may involve an increase in the cost of maintenance. As a general rule, unless there is extravagance in architectural features, school buildings, as other things, are worth just what they cost.

Durham :
Annual Report. THE Annual Report of the Education Committee of the County Council of Durham gives a detailed review of the work in that area for the year 1912-13, and refers incidentally to the changes which have taken place since the "appointed day." The volume is comprehensive and well arranged. Since April 1, 1904, the number of Council schools has increased from 96 to 241, and the accommodation from 41,706 to 122,651 school places; on the other hand, the non-provided schools have decreased from 268 with accommodation for 89,561 to 162 schools with 41,338 places. In the county of Durham, therefore, voluntary schools seem to have found themselves on the "slippery slope." During the ten years, and including proposals already approved by the Council, an expenditure of £1,125,244 has been incurred on the provision of school accommodation and on alterations and improvements of a substantial character. The number of scholars on the rolls on March 31, 1904, was 120,638; on the corresponding date in 1913 it was 140,712, and the percentage of attendance has improved from 87.3 to 89.9.

Equipment Costs. SOME interesting figures are given relating to the costs of equipment. In the ordinary elementary schools the cost for each child in average attendance for books (including libraries), apparatus, stationery, and needlework practice materials amounts to 2s. 3½d. and furniture to 7½d. The materials supplied for making garments in 1912-13 cost £1,691, and of this sum £1,464 was recovered by sales. There has been a considerable development of instruction in special subjects, the number of scholars qualified for grants being as follows:—Cookery, 9,837; laundrywork, 1,092; handicraft, 1,680; cottage gardening, 364.

Teachers. FOR the year ended March 31, 1905, the Durham Education Committee paid £192,791 for teachers' salaries, which was £1. 18s. 6½d. per child in average attendance. In 1912-13 the amount paid was £335,034—£2. 12s. 8½d. per child. On the "appointed day" the number of children on the register for each certificated teacher employed was 130.9; it is now 58.8. Certificated Assistant masters and mistresses who have had the advantage of college training have increased from 64.6 to 86.8, and from 22.2 to 67.8 respectively. Regarding the supply of teachers the County of Durham is not, perhaps, as deficient as some other areas, and there appears to be a tendency in the right direction. The total number of pupil-teachers and bursars under instruction since 1908-9 has been as follows:—

Year.	Pupil-Teachers.	Bursars.	Total.
1908-9	539	47	586
1909-10	376	26	402
1910-11	326	38	364
1911-12	320	29	349
1912-13	323	44	367

Higher Education. THE Report includes a careful review of the work done in the field of education "other than elementary." As in Lancashire, the Committee have considered the position of children who live several miles from a secondary school, and it has been the practice hitherto to grant railway contract tickets for any pupil attending a "maintained" secondary school for distances of five miles and over. During the year the following further resolution was adopted:—"That where no railway service is available, travelling expenses be allowed in cases of pupils residing three miles and beyond from a secondary school." This, and the provision hitherto in operation, are, however, governed by a regulation to the effect that no travelling expenses are allowed to pupils under twelve years of age. In the secondary schools maintained by the Authority there are 2,263

pupils, and in those aided 596. During the year four instructors in physical training have been appointed as visiting teachers for maintained schools.

THE total expenditure on the maintenance of elementary schools in the County of Durham was £414,600, or £3. 5s. for each child in average attendance, and the Government grants and miscellaneous receipts amounted to £266,640, or £2. 1s. 10d. for each child. For the purposes of higher education the expenditure was £90,411, of which £46,878 was met by the Local Taxation Grant, Board of Education grants, and miscellaneous receipts. Since the "appointed day" the County Council has incurred an expenditure of £172,904 on the erection of new secondary schools and alterations to existing buildings.

THE ninth annual holiday course organized under the auspices of the Glamorgan Education Committee will be held at the County School for Boys and the new Training College, Barry, from August 4 to 29. The prospectus shows that somewhat exceptional facilities will be afforded for satisfactory training in educational handwork, various branches of art, Nature-study, hygiene, physical exercises, workshop drawing, needlework, and dressmaking. Barry is an excellent centre for a holiday course. It is advantageously situated on the Bristol Channel and well provided with places of entertainment and opportunities for recreation. In view of the increasing attention devoted to handwork in elementary schools, the Summer School at Barry will, no doubt, attract a large number of teachers.

SCIENCE NOTES.

THERE was a large attendance at the annual May conversazione of the Royal Society on May 13, and the exhibits were of much interest, especially to the physicist. That friend of our childhood the kaleidoscope has been revived by Prof. Bickerton, who has constructed an instrument with optically worked mirrors, thereby securing results far transcending those obtained from the ordinary toy. The canine tooth of the Piltdown man (*Eoanthropus dawsoni*) was on view, while gyrostats stabilized bicycles, aeroplanes and mono-rail cars. From a teaching point of view, the most interesting exhibit was Dr. Fleming's apparatus for producing stationary vibrations in strings. By an electric motor an irrotational motion in a circle is imparted to one end of a string, thereby propagating waves in the latter. The tension is then adjusted until stationary waves are obtained.

THE Medical Officers of Schools Association has been discussing the question of "School Lighting," and we have received a copy of Dr. Nash's paper read before the Association a few months ago. The excellent plan is adopted of publishing the discussion following the papers. In this case both the original paper and the subsequent speeches contain information of value to teachers, and we think that science teachers especially should note the proceedings of this useful Association. The best results will be obtained when medical officers, architects, and teachers co-operate; we are therefore pleased to see some names of schoolmasters among the contributors to the proceedings of the Society.

WE must apologize for a cluster of clerical errors in last month's "Notes." If the 23:44 triangle be supposed to be drawn correctly, the area of the circle circumscribing the triangle will be equal to the square on the 44 side to within four parts in one million. The date of the occultation of Mars should have been given as the 30th of last month. We are obliged to a correspondent for calling our attention to the slips, which unfortunately escaped our notice when reading the proofs.

AMONG the Royal Society exhibits were transparencies taken from the photographic star charts made by the late J. Franklin-Adams. The charts cover the whole sky in 206 plates, and contain the photographic record of fifty-five million stars. Mr. S. Chapman has drawn some interesting results from sample counts taken on a considerable number of areas. He finds that in the whole sky there are from four to five thousand stars visible to the naked eye—a number fewer than the popular estimate, but quite in accordance with the

opinions long held by astronomers. These stars give us about seven-eighths of the aggregate starlight, the several hundreds of millions of fainter stars giving the remainder. The total light from all the stars is not more than we get from the full moon, while an ordinary 18 c.-p. filament lamp gives as much light at a distance of fifty yards. It is remarkable that spectrograms have been obtained from more than ten thousand stars, when the necessary dispersion of the light is taken into account.

THE Annual Conference of the Association of Teachers of Domestic Science Teaching. Domestic Subjects was held on May 16 at the Salters' Hall, E.C. Lady Baring gave the presidential address, Dr. Hutchison discussed diet for children, and Dr. Kimmins made a humorous and effective attack on the obsolete and erroneous "information" which too often appeared in small textbooks. He said there was no subject on which so many bad textbooks were written as hygiene. Examiners in the subject will probably endorse this severe remark; it would certainly be an improvement if authors and teachers cultivated the critical faculty, and if a less dogmatic style of teaching were adopted. It is to the credit of science masters in our public schools and grammar schools that they have exploded the idea that dogmatism is necessarily a large ingredient of successful teaching. The exact contrary is nearer to the truth.

WE venture to call the attention of naturalists to the value of a binocular prism field-glass which will focus objects fairly near, say at five yards. Possessing such an instrument, we have found it an interesting aid to observation of insect life, &c. in the garden.

REVIEWS AND MINOR NOTICES.

A First Book of English Literature. By GEORGE SAINTSBURY. (1s. 6d. Macmillan.)

We welcome a new and independent primer of English Literature, not even an abridgment of the author's "Short History," by a professor who has devoted a long life to the subject. It is what it professes to be, a "mind-map," or, as we might put it, a chart that will enable the student to take his bearings, to know the main currents, and to recognize all the greater luminaries. It is a plain uncoloured map, on which is inscribed "No flowers by request." Epigrams, antitheses, rounded phrases have been purposely excluded as deleterious to students and exasperating to examiners. Doubtless that will be a recommendation to teachers, but on the reader no longer *in statu pupillari* the effect of this self-denying ordinance is a little depressing. He sighs for the fleshpots of Egypt, the antitheses of Macaulay, the thunders and lightnings of Swinburne, the catchwords of Matthew Arnold, or even the honeyed rhetoric of Prof. Raleigh.

To review in detail such a book is an impossible task. As he turns the pages he is impressed by the wide erudition of the author, and also by his masterly grasp of his subject as a whole. On the other hand, he turns again and again to his favourite author or work, and finds either the bare name or what seems to an admirer a colourless generalization or platitude. On Bacon we have a page to prove that he cannot have written Shakespeare, two short sentences on the "Essays," noting their terseness or ruggedness (in their earlier form they are classed under pamphlets), but of the "Advancement of Learning" and Bacon's periodic style not a word. Of Herrick's muse, "the variety, daintiness, and fresh country feeling of his profane poems and the singularly contrasted quality of some of his sacred ones"—and that is all. Gibbon is "the most amiable if not the most respectable of historians," and Mitford is signalled out as the author of "a remarkable though not faultless History of Greece." On Collins's "Ode to Evening," the one faultless poem by which he chiefly lives, the sole remark is that it is written in unrhymed stanzas. Gray, in his "Ode on Vicissitude," "has anticipated the very spirit and manner of Wordsworth," but of Gray's Letters and Diaries, which do reveal, almost for

the first time, Wordsworth's love of mountains and wild nature, there is not a word.

A primer of literature naturally attends more to the form than the substance; yet we cannot but regard it as an error of judgment to reject as irrelevant all reference to the religious, political, philosophical, and scientific movements of the epoch. For instance, Tennyson and Browning cannot be fully appreciated without some reference to F. O. Maurice, Martineau, Jowett, and Darwin, nor Carlyle apart from Chartism and Socialism. Here for poetry metre is taken as the *filum labyrinthi*. The scansion is still by feet, and "long" and "short" are synonymous with accented and unaccented syllables. In prose, to take a simple example, we find Dean Mansel bracketed with J. H. Newman by reason of the "grave music" of his sermons and lectures.

Among omissions we have noted Bolingbroke and Shaftesbury, Sydney Smith and Clough. "Metaphysical" does not strictly mean "something beyond or behind the merely natural." There is a good Index, and the "Abstract and Chronological Conspectus" is a valuable supplement. We doubt whether the book will fulfil its intended purpose, to serve as a *gradus ad lectionem*, but the student who has already read the masterpieces of English literature will be enabled by its aid to fill up the gaps in his knowledge and to co-ordinate what he has already learned.

An Outline History of English Literature. By W. H. HUDSON. (2s. 6d. net. G. Bell.)

This Primer of English Literature, though prior in publication to that of Prof. Saintsbury, came into the reviewer's hands at a later date, else it might well have served to bring out by way of contrast the respective qualities and defects of the writers. Prof. Saintsbury, though he also has taught in his time, is pre-eminently the learned student and antiquary; and, as to English literature (and French no less), he might well boast that what he knows not is not knowledge. Mr. Hudson is by profession a lecturer, perhaps the most popular of Extension lecturers, and this volume in part reveals the secret of his popularity. He has a keen eye for seizing the salient points of a subject; he presents it in its most picturesque aspect, and passes over all the arid tracts and dark places. He has, moreover, a facile, fluid style. There are no parentheses or involutions, and we never have to read a sentence twice.

In defining what is meant by a history of literature, Mr. Hudson insists that it implies more than a chart or a pedigree of authors and their works; we must know as well something of the personality of the writers and also of political and social conditions under which they lived. In pursuance of this theory, periods are named after the most prominent and characteristic writer—"The Age of Chaucer, of Milton, &c.," instead of the usual "Elizabethan, Classical Epoch, &c." "English Literature before Chaucer" is dispatched in some eight pages, and only eleven works and authors are mentioned. Though, as Prof. Saintsbury contends, the foundations of English verse-prose were laid in Alfred's reign or before, Mr. Hudson knows that to ninety-nine out of every hundred of his readers Anglo-Saxon is an unknown tongue and that to them Cynewulf will be an empty name.

As a sample of the different treatment of the two primers, we may take at random Bacon. Here we start with "Bacon, the principal prose writer of his time." Follows a brief biography. "The Advancement of Learning" and the "Novum Organum" are passed over as epoch-making, but outside a history of literature. Lastly there is an appreciation of the "Essays," the matter as well as the style, with two notes, which will stick in the memory, Bacon's own, "they come home to men's business and bosoms," and one borrowed from Marlowe, "infinite riches in a little room." Many of the *di minores* of recent literature here find a niche—Sydney Smith, for instance (though his name is misspelt), Clough, Leslie Stephen, Jeffreys, J. R. Green—though many of the older worthies to be found in Saintsbury are absent.

To sum up our general impression, the Saintsbury Primer

is for ripe scholars, the Hudson Primer for secondary schools and Extension lecturers.

Education and the New Utilitarianism. By ALEXANDER DARROCH. (3s. 6d. net. Longmans.)

These addresses, delivered in recent years to various bodies of teachers, are well worth publishing in a collected form. In the first and most important address Prof. Darroch accepts as his standpoint the doctrines of Pragmatism, or the New Utilitarianism, as he prefers to call it, and in the remaining addresses these principles are applied to the solution of the most vexed problems of education that face us to-day. Action, not knowledge, is the *telos* of the educator. Truth is not static, but dynamic, something relative to the changing needs of men.

A review is not the place for discussing these fundamentals, and it is possible to approve most of the deductions without accepting the philosophy on which they are founded. Thus all will agree that undue emphasis has been attached to the intellectual side of education, that "knowledge grows and wisdom lingers," that social service should be the aim of the schoolmaster, and that this work should be begun and practised in the school. The answer to the objection that the tendency of Pragmatism will be to thrust into the background ideal pursuits such as Art and Literature seems to us hardly adequate. Enlightened Utilitarianism, it is argued, takes account of all human activities; all it postulates is that knowledge shall lead to action and serve human needs. But human nature craves knowledge for its own sake, and we sympathize with the man of science who boasted of a discovery by which no one could ever be a penny the richer. Moreover, what to one generation seems the idlest of speculations is found by the next to be pregnant with material benefits. This caveat, however, has little or no bearing on primary education, with which the volume is mainly concerned, and the plea for less of bookwork and more of handwork, for variety to suit different types of mind, for the encouragement of corporate life in the school, is urged with fresh force from a new philosophic point of view.

In the next lecture we welcome the protest against what may be called the ladder theory of education. By all means let us provide the "career open to talent," but let us not plan our curricula and classes with the object of furnishing rungs of the ladder. Nine-tenths of our scholars are destined to follow the calling of their fathers, and the duty of the State is to see that the masses are educated to become more efficient labourers and journeymen than their fathers.

On the Moral Education Problem, Prof. Darroch utters an uncertain note. Whether morality can be taught apart from religion he declines to discuss, and, while not denying the place of direct moral instruction in school, he attaches far higher importance to indirect teaching, and points to France (in a passage twice quoted) as an awful warning of the results of purely doctrinaire teaching in morals.

In the lecture on the Education of Women we detect what we may without offence call the cloven foot of Pragmatism. Our aim, we are told, must be to educate the future mothers of the race. Woman is still the helpmate of man. To train her as a competitor of man in the world of business is a mistaken ideal. We will not argue the point, but would only observe that of women who receive the higher education a third at least are destined to remain single. Further, that "the so-called higher educated woman, with head full of many 'ologies,' but ignorant and contemptuous of the simplest household duties," is a rare monstrosity, and not a typical product of the twentieth century.

Crowds. By GERALD STANLEY LEE. (6s. Methuen.)

Where are we going? In other words, what is the future of democracy, or, to speak more strictly, what is the ideal that would satisfy the aspirations of the author in the question asked in the first chapter? and the answer, to put it in a single word, is Co-operation. With all the answers propounded by our present leaders of thought—at any rate, by

those who have the ear of the crowd—Mr. Lee is profoundly dissatisfied. G. B. Shaw, H. G. Wells, Bishop Gore, tell us what they do not want, but none of them has a clear and realizable vision of the millennium as he would have it if he had the ordering. But it is on this very failure in the leaders that Mr. Lee founds his hopes for the future. He is a born optimist. The crowd at bottom is good and reasonable. It has sinned through ignorance, and whenever the inspired leader arises it will follow him gladly. To syndicalists and capitalists, to trusts and strikers, he metes out equal justice. Pierpont Morgan and Tom Mann are taken as types of the two classes, and it is shown how each failed, not because of vice in the blood, but because either was purblind, regarding only his own class and indifferent to the other.

The author cannot be classed as a hedonist, for the gospel he preaches is universal charity—love thy neighbour as thyself—and yet we cannot but be conscious how widely it differs from the gospel of primitive Christianity. All are to be fellow labourers, and each man to have his proper share in the product according to his worth; there will be no more grinding poverty or discontent; the gospel of the Cross will be a thing of the past; *entsagen sollst du* will be an effete maxim. With the new race machinery will no longer be a thing of cogs and wheels, for each man will feel himself a part of the driving-wheel, helping to produce his own heat and electricity. We cannot help recalling the concluding words of Renan, after a visit to the great Paris Exhibition: "Combien de choses y a-t-il dont un philosophe peut se passer?"

The book is eminently readable, abounding in lively thumbnail sketches, apt illustrations, and racy epigrams. Co-operation is still in its very infancy, and we believe with the author that it has before it a great future, though we doubt whether it is the one key to human progress. It has still to be tried on a large scale, and the failures have been more numerous than the successes.

A History of Education in Modern Times. By FRANK PIERREPOINT GRAVES. (5s. net. Macmillan.)

This completes Prof. Graves's "History of Education" in three parts. The first carried the history down to medieval times; the second treated of medieval times and the Transition period. The concluding volume begins with Rousseau and ends with the inevitable Montessori. The work is a history and at the same time a critical study. To each of the great educators—Rousseau, Pestalozzi, Froebel, Herbart—is devoted an essay examining the *idée mère*, the philosophical or psychological principle underlying the system and showing how far this is sound and of permanent value. Education in the United States naturally assumes larger proportions than in English and Continental histories, and two of the twelve chapters are devoted to the rise and organization of the common school. Similarly much that seems to us of supreme importance in England is wholly omitted or glanced at in passing. We search in vain for any reference to the great public schools, and the names of Thomas Arnold, Thring, and Temple are not in the index. We do not understand what is meant by the "University Commission for Winchester in 1856," and it is to Rugby rather than to Winchester that the credit should be given of introducing science in the regular curriculum. J. M. Wilson's essay in "Essays on a Liberal Education" first set the ball rolling. The most memorable movement of the last half-century is the advance of women's education, both secondary and higher, alike in extent and in quality, and this almost deserved a chapter to itself. But on these two subjects there is a choice of English authorities, whereas for American schools we should find it hard to name a guide at once so judicious and so attractive as Prof. Graves.

Co-education in Practice. By J. H. BADLEY. (1s. net. Cambridge: Heffer.)

This is a paper read before "The Heretics" (apparently a Cambridge essay club) by the Head Master of Bedales. In contrast to some recent utterances of Co-educationists it impresses us by its sanity and sobriety. Mr. Badley neither cries his own wares nor pretends that he has "found the pie's nest." He would not have boys and girls after reaching the age of fourteen taught the same things or playing the same games, and he admits that we are still in the experimental stage. Co-education is not adapted for all societies or for all peoples. It cannot succeed when the home influences are against it, or in countries where the ideas of sexuality are lax. The two things women need are a *carrière ouverte*, not necessarily the same as men's, but equal freedom with

men to work out their own salvation, and, secondly, equality of intercourse. The sex-function, marriage and maternity, is not the only purpose and outlet of a woman's life. A mixed boarding-school provides for free intercourse between boys and girls, and leads to comradeship and friendships, but not in Mr. Badley's experience to flirtations, though it does lead not rarely to marriages between Old Bedalians. An Appendix gives facts and figures showing the extent of Co-education in Great Britain and on the Continent, and in America it is maintained that it is only of the Eastern States, and there mainly of the huge schools in the great cities, that it can be truly said that Co-education is on the decline.

A Book about Authors. By A. R. HOPE MONCRIEFF. (10s. Black.)

As Mr. Hope announces this volume as his swan-song, but with a qualifying "probably," that makes us hope that this may mean no more than "positively the last appearance" of a famous artiste. He has been an author for nearly half a century, and he gives us here his reflexions on the profession, gathered partly from historic sources, including bards and rhapsodists, but mostly drawn from personal experiences, his own and his brother authors. Mr. Moncrieff has all his life observed the older literary tradition and resented the impertinence of critics and others who betrayed his anonymity. He has written in various characters and under various aliases, and among his most amusing anecdotes are accounts of the traps thus unintentionally laid for reviewers and publishers. But now he throws off the mask and reveals without disguise all the secrets of the prison-house. He is here the candid friend who spares neither authors, editors, publishers, nor reviewers—least of all himself. But it is not "the candid friend" from whom George Canning prayed to be spared. There is plenty of French *malice* in the book, but no malice. There are tales of authors who "go mad and beat their wives," of blood-sucking publishers, and of "indolent irresponsible" reviewers; but living sinners are never named or so described as to be identified, and the sanctity of club life is strictly observed. Had he, as is the fashion nowadays, played to the gallery by a *chronique scandaleuse*, what tales he could have told! Even when he relates how he has been defrauded and cheated, there is no touch of bitterness in his complaint. Thus he meets a publisher, largely in his debt, travelling first class, and, when invited to get in, replies: "I travel third and pay my debts"; but this epigram is his sole revenge, and the publisher, who is known to be hard up, is not even dunned. This anecdote may partly account for the extraordinary statement at the beginning of the volume. Mr. Moncrieff, unlike most authors, has kept accounts. He has written over two hundred books, ranging from sixpenny guidebooks to a geographical compendium in six quarto volumes (every page but one from his own pen), and his gross income from literature for the last forty years has averaged £110. This may serve as a warning to young aspirants who look to authorship as an easy berth; but Mr. Moncrieff regards it as the worst of trades, and the noblest of professions. Writing to him has been its own exceeding great reward. The book is full of wise saws and modern instances which we would gladly quote. If the reader desires a sample of the author's special gift, we would refer him to pages 127-9, where the school experiences of twenty-nine authors are given, each in a neat epigram.

Notes on the Teaching of English. Part II. By W. J. BATCHELDER. (1s. 6d. Macmillan.)

Part II deals with the teaching of English in the upper half of an elementary school. It follows closely the plan and methods recommended in the excellent suggestions of the Board of Education. The advice given to teachers is sensible and practical, but the author seems to us to deal too much in generalities. That in the senior classes opportunity should be given for children to read daily in the same way that grown-ups read for individual profit and pleasure is admirable advice, but the statement that the scholar will then "commence to acquire the invaluable habit of thinking consciously about human motive" does not take us much forwarder. We desiderate more model lessons such as that on "The Forsaken Merman," and actual compositions of children with corrections and comments of the ideal teacher. To note two minor points: we should not have quoted Arkwright and Stephenson to enforce the value of the literary imagination, and for examiners in reading and recitation it will not be easy to find "some person other than the teacher who is familiar with each child's capacities." There are very helpful lists of books recommended.

Initiation into Literature. By EMILE FAGUET. Translated by Sir HOME GORDON. (3s. 6d. net. Williams & Norgate.)

A very comprehensive initiation is here given from the literature of the Greeks and Hindus to that of various European countries in the nineteenth century. The work is good as a framework or a book of reference, but it would be pernicious if placed in the hands

(Continued on page 396.)

DENT'S NEW BOOKS.

DENT'S ENGLISH LITERATURE FOR SCHOOLS. Edited by ARTHUR BURRELL, M.A.

A NEW SERIES of Continuous Readers, WELL PRINTED in a specially prepared type, STRONGLY BOUND in CLOTH BOARDS, and published at **SIXPENCE** each.

NOW READY.

POETRY.
Greece and Rome in English Poetry.

EPOCHS OF FRENCH HISTORY. By E. A. WOOLF, B.A.

Histoire de France: I.—Les Premiers Français. By E. A. WOOLF, B.A., The County School, Ramsgate. 1s. 6d.

Histoire de France: III.—La Guerre de Cent Ans. By E. ALEC WOOLF, B.A. 1s. 6d. [In the Press.]

A MANUAL OF FRENCH LITERATURE. By J. P. R. MARICHAL, L. ès L., B. ès Sc., Lecturer in French at Queen's University, Kingston, Ontario.

This brightly written handbook serves to give a bird's-eye view of the course of French literature, with useful sections on the history of France, a knowledge of which is often indispensable to the student of its literature. The book is written in simple French, and thus at the same time familiarizes the reader with the vocabulary of the literary critic and of the historian.

FRENCH ESSAYS AND ESSAY-WRITING. By J. P. R. MARICHAL, L. ès L., B. ès Sc., Lecturer in French at Queen's University, Kingston, Ontario. 2s.

A careful Introduction, by a skilled and experienced teacher, to the writing of French essays. Judiciously graded exercises with copious model passages and valuable hints on method serve to lead the learner from simple beginnings to the advanced stages. The book can therefore be used as a companion during a considerable portion of the school course and in the early years of university work.

A BOOK OF ELEMENTARY MECHANICS. By C. S. JACKSON, M.A., and W. M. ROBERTS, M.A., Instructors in Mathematics at the Royal Military Academy, Woolwich. 3s. 6d.

London: J. M. DENT & SONS, Ltd., Aldine House, Bedford St., W.C.

[See also next page.]

of a student for the purposes of "cram." Short critical sketches are given of the chief literary works and their writers, which are intended to excite interest and further study; the paragraphs on Pindar, Dante, and Corneille are particularly good. There is an unfortunate mistake on page 3, where the *Ramayana* is confused with the *Mahabharata*, but that may be due to the translator or printer. The adult student cannot better enter the "realms of gold" than by a gateway that leads to a broad general view of the literature of the world, and this volume is such a gateway. But the author realizes that it cannot do more than "incite to research and meditation"; and if the journey is pursued beyond the gateway the book will serve an excellent purpose—that of a worthy introduction. It would be well, too, that children should have some idea of the country round that which they are exploring, and the teacher may make use of this repertory for his lessons, and thus inculcate a sense of proportion and of the relative importance of any piece of literature.

The Composition of the Iliad. By AUSTIN SMYTH.
(6s. net. Longmans.)

This is an ingenious attempt by a distinguished Cambridge scholar, now Librarian of the House of Commons, to reduce the twenty-four Books of the "Iliad" to forty-five sections of three hundred lines each. The essayist takes as his motto a scholion on Pindar, "They [the rhapsodists] memorized and recited the scattered poetry of Homer, but they wholly deformed it," and tells us in his preface that he utterly dissents from Dr. Leaf's view of the "Iliad" as "a secular growth." He then plunges without a foreword *in medias res*. Here we regret that we cannot follow him, and must be content to say that, much as we admire his ingenuity, he leaves us unconvinced. To a scholar who set himself to learn the "Iliad" by heart (and such a feat has been accomplished) it would doubtless be an aid to memory to know the number of lines in each canto, but an Iopas would not greatly heed, and his hearers would heed still less, whether he omitted or interpolated lines. Is there any parallel among primitive epics—Indian, Teutonic, or Finnish—to this numerical canon? The Baconians have prejudiced us against these numerical keys, but in this case it is not all labour lost. The Homeric scholar could not find a more profitable exercise than to go through Mr. Smyth's essay and attempt to answer all the *anaplois* that he raises.

Six Contes. Par GUY DE MAUPASSANT. Edited by HAROLD N. P. SLOMAN. (2s. 6d. Cambridge University Press.)

Maupassant is a past master of style, and we welcome a school edition of six characteristic *contes*. We must, however, enter a demurrer to the editor's challenge that no English writers are comparable to him in this line except E. A. Poe and Thomas Hardy. Against the first "Le Horla" we would put De Quincey's "Opium Eater," and it would not be hard to match in English the other five. We doubt whether "Le Horla," an autobiographical fragment narrating the incipient stages of Maupassant's madness, is very appropriate reading for schools, and the same objection applies in a less degree to "Qui sait." The other four stories are, each in its way, perfect gems. The exercises for re-translation are well framed, and will tax the pupil's wits even if he has the text before him. In the questions there is perhaps an excess of grammar—rules of gender and parts of verbs. "La malaise" is a misprint.

Euripides the Rationalist. By A. W. VERRALL.
(7s. 6d. Cambridge University Press.)

We welcome this reprint of what is the most original and at the same time the least paradoxical of Dr. Verrall's classical works.

French Phrases for Advanced Students. By EDWARD J. KEELEY. (1s. 6d. net. Pitman.)

In this reprint are added elementary vocabularies and a list of five hundred words of the first conjugation. The former is useful as supplementing some lacunae in the "Phrases"—for instance, school words. We do not see what purpose the latter serves. The three thousand phrases are, on the whole, well chosen, but they might be better arranged. The classification, partly alphabetical and partly by subjects, makes it difficult to find one's way about. Thus, we pass from "dress" to *devoir*, from "eat" to *entendre*. *Adresser une lettre* can hardly be called a phrase, but a pupil does want to know the French equivalent of "yours sincerely," "kind regards to." Under "Trains" we should like to be told how to write for a sleeping berth or a seat facing the engine, and the pupil needs warning that *le train de Calais* is the train to, not from, Calais.

MR. JOHN MURRAY

A JUNIOR CHEMISTRY.

By W. D. ROGERS,

F.I.C., B.Sc. (Hons. Lond.), A.R.C.Sc. (Lond.), Chemistry Master, Grove Park School, Wrexham.

A thoroughly sound course of experimental chemistry on modern lines, based throughout upon laboratory work. Specially prepared to cover the course needed for the Junior "Locals" and similar Examinations. With numerous Diagrams, 3s. 6d.

LIMEN: A First Latin Book.

By Professors

WALTERS and CONWAY.

FOURTH (Revised) EDITION, 2s. 6d.

TEACHERS' EDITION, including the APPENDIX (Suggestions for Teachers on the Oral Method), 3s. Part I, 1s. 6d. Part II, 1s. 6d.

The Recommendations of the Joint Committee on Grammatical Terminology have been followed throughout the book, except in three points of detail where the authors find themselves unable to accept the findings of the majority of the Committee.

A "MIDDLE METHOD" GERMAN COURSE.

Reading-Book and Grammar with Direct Method and Re-Translation Exercises. By F. W. M. DRAPER, B.A. (Cantab.), L. ès L. (University of Paris), Assistant Master at the City of London School. 2s. 6d.

Each subject is treated on a double page. It consists of three parts—(1) The narrative; (2) Word-groups; (3) Oral Questions. Beside this, there are several carefully graduated exercises on each reading lesson, and a tabulated grammar appendix, to which constant reference is made throughout. The systematic teaching of composition and grammar is an important factor in the method of the book.

MATTER, FORM, AND STYLE.

A Manual of Practice in the Writing of English Composition. By HARDRESS O'GRADY. 3rd Impression. 2s.

ENGLISH COMPOSITION.

By E. E. KITCHENER, M.A., Whitgift School, Croydon. 2nd Impression. 1s. 6d.

Especially suitable for the Oxford and Cambridge Local and similar Examinations.

ENGLISH GRAMMAR.

By R. B. MORGAN, M.Litt., Whitgift School, Croydon. 2nd Impression. 1s. 6d.

Especially suitable for the Oxford and Cambridge Local and similar Examinations. *The Recommendations of the Joint Committee on Grammatical Terminology have been adopted.*

LECTURES SCOLAIRES.

Edited by W. MANSFIELD POOLE, M.A., and E. L. LASSIMONNE, *Officier de l'Instruction Publique.*

Questions de sens and Questions de Grammaire facing each page.

Série Élémentaire. 1s. each.

For Preparatory Schools and the Lower Forms of a Public School (ages 11 to 13).

Aventures Merveilleuses. D'après NATHANIEL HAWTHORNE.

***Le Toucher d'Or.** D'après NATHANIEL HAWTHORNE.

***Guillaume le Tisserand.** ALBERT WOLFF.

Le Chêne Parlant. GEORGE SAND.

La Souris Blanche. HÉGÉSIPPE MOREAU.

Les Voisins de Campagne. HENRI MONNIER.

Série Intermédiaire. 1s. 6d. each.

For the Top Form of a Preparatory School and Middle Forms of a Public School (ages 13 to 15).

Un Homme à la Mer. LOUIS DESNOYERS.

Ce Gredin de Pritchard! DUMAS (Père).

Un Aiglon. AMÉDÉE ACHARD.

***Le Parolement du Docteur Maure et l'Oncle d'Amérique.** EMILE SOUVESTRE.

Série Supérieure. 1s. 6d. each.

Le Mouron Rouge. Adapté de l'Anglais de Madame la BARONNE ORCZY.

Martin Paz. JULES VERNE.

Noiraud, Guignol et Deux Cyclones. LUDOVIC HALÉVY.

** Both the texts and the questions in these books are easier than the others of the series to which they belong.*

GRAMMAIRE FRANÇAISE

ÉLÉMENTAIRE. Avec Exercices.

By W. M. POOLE, M.A., Head of the Modern Language Department, Royal Naval College, Osborne. *Third Edition.* 2s. 6d.

In the new (3rd) edition the Terminology recommended by the Joint Committee on Grammatical Terminology has been adopted.

LONDON: JOHN MURRAY, ALBEMARLE STREET, W.

collaboration of his pupils. This partnership has enabled him to discover the words at which they stick, and either substitute synonyms or explain them by synonyms or definitions (in French) at the foot of the page. To confine himself to presents and present perfect seems to us an unnecessary handicap. A pupil in his second year must have learnt at least all the tenses of *avoir* and *être* and verbs of the first conjugation. In fact, before the end he is asked to give the features of irregular verbs. "Bamboula," all may not be aware, is the Parisian argot for "Sambo."

Sentence Expansion leading to Free Composition in French.

By MARC CEPPI and HENRY RAYMENT. (1s. G. Bell.)

From a given base, "J'ai rencontré un homme," the pupil is led by successive developments (alternative phrases being supplied) to construct a fairly long sentence, "Vendredi dernier, en passant sur le pont de pierre qu'on a construit," &c., "j'ai rencontré un petit jeune homme blond," &c. The method is well carried out, and the book will give useful hints to the teacher; but, as we have remarked with so many books of the kind, the teacher, if only he has time, will frame more suitable exercises from the Reader he is using.

A Middle Method German Course. By F. W. M. DRAPER. (2s. 6d. Murray.)

The *via media* would supplement the Direct Method by translation both into and from the foreign language. In this course we start with simple narratives followed by oral questions. A new departure is to give with each narrative on the opposite page a *Wortgruppe*—the new words classified by meaning as verbs, nouns, derivatives, and other parts of speech; thus, *kochen, die Küche, die Köchin, unten*. No English is given, but there is a vocabulary at the end. Numbers at the bottom of the page refer to the grammar, which by the Middle Method "should not be acquired by chance, but be learnt by heart and constantly repeated." The first twenty passages are descriptions of life in a German village, composed by the author himself, and these we can praise unreservedly. They are simply written, and will enable the pupil to breathe from the very start a German atmosphere. For the exercises we think more assistance should have been given. Why is there no English-German vocabulary? The grammar is confined mainly to accident, and judiciously excludes rare and exceptional forms. This may partly reconcile us to the injunction that it should be learnt by heart. Print, as we have

often observed, is half the battle with grammar, and Mr. Draper's grammar is heavily handicapped by being all printed in small type with no distinction between rules and examples, German and English.

German Self-Taught by the Natural Method. By W. E. WEBER. (1s. Grammar, 1s.; Key to Grammar, 6d. Marlborough.)

In this new and enlarged edition of German on Thimm's system the grammar has been separated from the vocabulary and forms a separate volume. This is a distinct improvement. The "Self-Taught Series" is so well known that it is hardly necessary to point out that the "Natural Method" is poles asunder from the Reformed Method, and makes the word, not the sentence, the starting point. It may serve for adults and travellers, who will find vocabularies arranged under subjects with an index that makes reference easy, but it does not pretend to be suitable for school use. To transliterate each word seems to us a superfluity. With directions for the force of the letters, all that is needed is in a few cases to indicate the accent.

First Steps in German Composition. By the Rev. W. H. DAVID. (1s. 6d. Oxford University Press.)

A collection of simple stories with German vocabulary *en face*. The author prescribes that they should first be done vocally, then written out with the German words to aid, and finally without any help. The superiority of this to the old Ollendorff method of cabbages and grandmothers is patent. The exercises are well graded, but there is no attempt to follow the grammatical order: for instance, weak before strong verbs.

Notes on the Hebrew Prophets. Compiled by G. WYNNE-EDWARDS and K. H. MCCUTCHEON, B.A. (2s. 6d. net. Oxford.)

This volume forms a very interesting addition to school textbooks. It is the work of practical teachers, who explain that "it owes its present form to the fact that it was originally written to avoid the necessity of note-taking on the part of our pupils, our object being to ensure clearness and brevity, and, at the same time, to put into their hands a book which would not be intelligible without the actual text of the Bible." The subject-matter of the notes has been drawn from standard works by well known scholars (Driver, G. A. Smith, Davidson, Whitehouse, Kirkpatrick, Sayce).

(Continued on page 400.)

BLACK'S FRENCH BOOKS

Edited by E. MAGEE and M. ANCEAU.

RÉCITS ET COMPOSITIONS D'APRÈS L'IMAGE

Containing 11 Full-page Illustrations IN COLOUR, with corresponding Text and Exercises.

Demy 8vo. Price 6d. Limp Cloth.

The title of this little book describes its twofold aim, i.e., that of a Reader, and an Introduction to Free Composition in French. It is intended for the use of pupils who have learned according to the Direct Method, and who have an elementary knowledge of grammar. The composition exercises, especially those descriptive of the pictures, might be prepared in class for written home-work. The form of the book makes it suitable for rapid reading.

LECTURES ILLUSTRÉES

(ÉLÉMENTS DE GRAMMAIRE.)

Containing 58 Illustrations, of which 32 are IN COLOUR.

Crown 4to. Price 1s. 6d. Bound in cloth.

"LECTURES ILLUSTRÉES" is intended for children who have already studied a simpler textbook on Direct Method lines, but, to obviate the difficulty of its possible use by beginners, the grammatical exercises have been arranged in the form of revision of the lessons, simply and comprehensively.

In *Lectures Illustrées* the pictures are in themselves attractive as pictures, and interest the pupil in the scenes or the events which they portray.

A feature of the above two books is the beautiful illustrations in colour unmatched in any French textbooks hitherto published.

Edited by F. B. KIRKMAN.

LA PREMIÈRE ANNÉE DE FRANÇAIS

A DAY IN PARIS

FIFTH EDITION. Completing 40,000 Copies. Small Crown 8vo. Price 2s. Bound in Cloth. Illustrated.

The important improvements made in the Third Edition of this work have led to a prompt demand for two new editions. Apart from the rectification of printers' errors and slips the text remains the same.

LA PREMIÈRE ANNÉE DE FRANÇAIS

PREMIÈRE PARTIE (Phonetic Transcription.)

Transcribed by Professor D. L. SAVORY, M.A.

Third Edition, revised and entirely reset, with the liaison of words indicated.

Small crown 8vo. Price 6d. Limp Cloth. Illustrated.

The orthodox transliteration of the Association Phonétique Internationale has been adopted throughout. We can cordially recommend the book to all teachers who prefer to use phonetic script before the conventional spelling.—*The Teacher.*

SOIRÉES CHEZ LES PASCAL

Illustrated with 5 Full-page Illustrations IN COLOUR.

Demy 8vo. Price 6d. Limp Cloth.

The members of the PASCAL FAMILY will be familiar to the many readers of the "PREMIÈRE ANNÉE DE FRANÇAIS." The present book provides a first step towards the creation of an interest in the reading of French books as an end in itself.

LA DEUXIÈME ANNÉE DE FRANÇAIS

NEW AND REVISED EDITION.

Small Crown 8vo. Price 2s. 6d. Bound in Cloth. Illustrated.

The book with its predecessor ("La Première Année de Français") forms, in our opinion, one of the two best existing French Courses for school use.—*Teacher.*

"LESSON NOTES" on the above are presented free to teachers using the books on application to the publishers.

EDUCATION AND INDUSTRIAL TRAINING OF BOYS AND GIRLS. By HENRY DYER, C.E., M.A., D.Sc., LL.D., Member of the Glasgow School Board, Hon. Principal of the Imperial College of Engineering, Tokyo. 1s. net.

Education and National Life. By HENRY DYER, C.E., M.A., D.Sc., LL.D., Member of Glasgow School Board, Hon. Principal of the Imperial College of Engineering, Tokyo. 1s. net.

Discusses the question of what society has a right to call upon the schools to do, in order that its members may be fitted to discharge aright their individual and communal responsibilities. The chapters deal with: present-day education, essentials of education, physical conditions, specialized education, religious and social education.

"Dr. Dyer has opened up a rich vein of speculation and worked it with considerable ability."—*Glasgow Herald*.

The Pedagogy of Educational Handicraft. By T. W. BERRY, Director of Education, Rhondda, S. Wales. Illustrated. 1s. 6d. net.

"We heartily commend this little book to the notice of all those interested in the introduction of manual training into the school life of our children."—*Education*.

The Association of History and Geography.

By A. J. BERRY, M.A., Director of Education, Preston. 1s. 6d. net.

Shows how closely the geography and history of a region are connected. Shows also how the interest of the children may be deepened, and their power of acquiring knowledge of both subjects increased, by attention to the interaction of history and geography on each other.

"His treatment of his subject is worthy of the attention of all interested in these two branches of knowledge."—*Athenaeum*.

Johann Friedrich Herbart. A STUDY IN PEDAGOGICS. By A. M. WILLIAMS, M.A., Principal of the Glasgow Provincial Training College for Teachers. 1s. net.

A brief account of Herbart's views on the theory and practice of education, and of the way in which these are related to his philosophy.

The Teaching of Grammar (English and Elementary Latin). By L. W. WILSDEN, M.A. 1s. net.

"It is cleverly and very pleasantly written, and we strongly advise its study."—*School Guardian*.

The Education of Girls in Switzerland and Bavaria. By ISABEL L. RHYS, Head Mistress of Liverpool High School. 1s. net.

"Contains an instructive and lucid account of foreign methods of study, teaching, and training, of much interest from the educational point of view."—*Literary World*.

The Teacher's Rabelais. Prepared by GERALDINE E. HOPKINSON, Lecturer on Education in the University of Bristol. 1s. net.

Many will be surprised to find how many "modern" ideas were anticipated by Rabelais.

Natural Elocution. IN SPEECH AND SONG. By M'Hardy FLINT, Professor of Elocution, Maynooth College, &c.; Examiner, Royal Irish Academy of Music. 1s. net.

"He who wishes to improve his elocution or that of his pupils cannot do better than acquire this very practical manual."—*Education*.

Reynolds's Discourses on Art. A Selection, edited by Prof. J. J. FINDLAY, M.A., Ph.D., Manchester. With Frontispiece. 2s. net.

These famous discourses reveal Reynolds the teacher. They throw light, moreover, on two important educational problems: as to the nature and function of Art in itself, and as to the mode by which the mind makes progress in the realm of Art.

The Teaching of Geography. By LIONEL W. LYDE, M.A., Professor of Economic Geography in University College, London. 1s. net.

"The vigorously written little treatise before us will certainly stimulate teachers. Many practical suggestions are given in the lectures, a perusal of which ought to banish for ever the dreary and mind-deadening methods still prevailing in some schools."—*School Guardian*.

THE YOUNG TEACHER'S PRIMER. By J. S. DAVIS, M.A., Lecturer in Education and Master of Method in the Culham Training College. 1s. net.

HOW TO SPEAK AND READ. Being Notes on the Management of the Voice for the use of Teachers, Preachers, and Public Speakers generally. By J. BRUCE ALSTON, Recognized Teacher of Public Reading and Speaking to the University of Glasgow, &c. 1s. 6d. net.

A SURVEY OF ELEMENTARY ENGLISH EDUCATION. By E. B. R. PRIDEAUX, M.A., D.Sc., formerly Lecturer in Education, University of Liverpool. 2s. net.

The Teaching of English. By A. E. ROBERTS, M.A., Principal Lecturer in English at the Islington Day Training College, and A. BARTER, L.L.A., late Head Mistress of the Braintree Pupil Teacher School. 2s. 6d. net.

"An illuminating, stimulative, and practical handbook. To all our readers of every grade of the profession our advice is—Buy the volume, use it daily, and do not allow anyone to borrow it."—*Practical Teacher*.

Colour-Sense Training and Colour Using. By E. J. TAYLOR, Sharneyford Council School, Bacup. With 16 full-page illustrations in colour. 1s. 6d. net.

This book suggests to teachers a rational, scientific, and highly practical method of colour-sense training from the dawn of colour consciousness onwards.

"A clever and original little book."—*Guardian*.

Health in the School. By J. S. ELKINGTON, M.D., D.P.H., Chief Health Officer and Head of the Department of Public Health of Tasmania. 2s. net.

"Presents in a clear and interesting form a very able résumé of what the schoolmaster and schoolmistress ought to know of the subject, and incidentally drives home the truth of the vitally intimate connexion between bodily health and educational progress."—*School World*.

The Teaching of Latin. By W. H. S. JONES, M.A., the Perse Grammar School, Cambridge. 1s. net.

Containing an outline of a three-years' course on the new method: full of useful hints. The author shows what a classical course can do for a boy, even if the time devoted to it is very limited.

"This little book is worth reading. . . . It is full of valuable hints for experienced teachers."—*The Classical Review*.

The Teaching of Modern Languages. WITH SPECIAL REFERENCE TO BIG TOWNS. By CLAUDESLEY BRERETON, M.A., L. ès L. 1s. net.

"Every schoolmaster and everyone concerned with the teaching of modern languages ought to study these one hundred and seven little pages with the greatest care."—*Academy*.

The Minor Educational Writings of Jean-Jacques Rousseau. Selected and translated by WILLIAM BOYD, D.Phil., M.A., B.Sc., Lecturer in Education in the University of Glasgow. 1s. 6d. net.

These occasional writings of Rousseau, now for the first time offered to English readers, provide the best possible commentary on the principles of the "Emile." The translator contributes an illuminating introduction.

"The selection is judicious and the translation is excellent. We freely commend the neat little volume."—*Educational Times*.

The School and the Child. Being Selections from the Educational Essays of JOHN DEWEY, Head Professor of Philosophy in the Columbia University, New York. Edited by J. J. FINDLAY, M.A., Ph.D., Professor of Education in the University of Manchester. 1s. net.

"We know of no book of the size, or of three times the size, more full of helpful thought."—*School*.

Educational Essays. By JOHN DEWEY, Head Professor of Philosophy in the Columbia University, New York. Edited by J. J. FINDLAY, M.A., Ph.D., Professor of Education in the University of Manchester. 1s. 6d. net.

"The book is packed with wisdom."—*School Guardian*.

Simple Lessons in Nature Study. By JOHN O'NEILL, Illustrated. 1s. net.

A bright, brief, and thoroughly practical treatise on Nature Study heuristically treated.

BLACKIE & SON, LTD., 50 OLD BAILEY, LONDON.
GLASGOW AND BOMBAY.

[See also page 404.]

There is also a useful sketch-map. We warmly recommend this book for experimental use in middle or upper form classes. The young scholar, equipped with this volume and the R.V., ought to be able and willing to explore that most important, albeit most neglected, part of the Old Testament Literature, the prophetic writings. The aid given in the notes and introductions is just sufficient to stimulate an intelligent interest in the literature surveyed. We heartily wish the little book a successful career.

A Biblical History for Junior Forms (Old Testament). By F. J. FOAKES-JACKSON, D.D. (2s. 6d. Cambridge: Heffer.)

The present volume is designed as a simple introduction, for the use of Junior Forms, to lead on to Dr. Foakes-Jackson's larger and well known "Biblical History of the Hebrews." The work of simplification has been well done, and the volume will be found exceedingly useful for its proper purposes. Chapters on the Geography of Palestine, on light thrown on the history by recent discoveries, and various tables, will commend themselves to the practical teacher.

Great Men of the Christian Church. By Prof. WILLISTON WALKER, of Yale. (5s. net. Cambridge University Press for Chicago Press.)

This is a student's textbook. It contains a brief series of biographies "designed for the reader or student without technical training in Church history. For this reason considerable attention has been paid to the general condition of the Church or of religious thought in the periods in which the leaders here described did their work, in order that the reader may appreciate their relations to their times." The series is fairly comprehensive, including the names of Justin Martyr, Tertullian, Athanasius, Augustine, Patrick, Hildebrand, Francis, Thomas Aquinas, John Wiclif, Martin Luther, John Calvin, John Knox, Ignatius Loyola, George Fox, John Wesley, Jonathan Edwards, and Horace Bushnell. At the end of each chapter a useful series of questions is given, together with references to larger works for additional reading. The whole forms an exceedingly useful introduction to Church history. It is easy to read and is well calculated to stimulate intelligent interest.

Reptiles, Amphibia, Fishes, and Lower Chordata. Edited by J. T. CUNNINGHAM, M.A. (10s. 6d. net. Methuen.)

This book is the result of the collaboration of four distinguished

zoologists. The Reptiles are described by Mr. Richard Lydekker, the Amphibia by Mr. Boulenger and Mr. J. T. Cunningham (who also contributes the section on Fishes), and the Lower Chordates by Prof. J. Arthur Thomson. The names of these contributors are a guarantee of authenticity and clearness of exposition; and though there are, in our view, objections to be urged against some of the phylogenetic speculations put forward by the authors, these speculations are neither so many nor so new as to damage the book by deflecting the attention of the reader from the animals described to the zoologists describing them. It is truly astonishing to find, after reading this excellent book, how much of the natural history of so diverse an assemblage of animals has been put into the space of five hundred pages. An adequate account is given of their anatomy, physiology, habits, and distribution; and, what is a very rare virtue indeed, these matters are presented in such a way as to show interdependence. There are very few statements of fact (as opposed to opinions) that we feel inclined to challenge, but when Mr. Cunningham says that the continuation of the lateral line on the head of a teleost is represented in elasmobranchs by "separate tubes . . . running obliquely beneath the surface of the skin" (presumably the ampullary canals), we can only suggest that he should try a simple injection experiment to demonstrate the presence, on the head of a shark or ray, an arrangement of canals almost precisely similar to that found on the head of a teleost. The book is illustrated by many good line drawings in the text and by thirty-six full-page plates. The legends of ten of the latter contain annoying misprints.

A Course of Practical English. By E. J. BALLEE. (1s. 6d. G. Bell.)

This is a rudimentary English grammar, with notes on Composition. It begins with Punctuation, on which there are fourteen pages of exercises. The rules enforce what is known to the printers as full punctuation. Thus by the rule we should write "She went, and called him"; "It is, in fact, absurd." A verb is defined as "a word by which we make an assertion, or statement, about some person or thing." Questions are ignored. In "There was racing and chasing on Cannobie Lea" there is no ellipsis. Under "Figures of Speech" we read, "Irony: in this the literal meaning is just the reverse of the meaning intended." Apply the definition to "He will not set the Thames on fire." Why should

ENGLISH COMPOSITION.

A SYSTEMATIC COURSE FOR SCHOOL USE.

By HARRY PINE, with an Introduction by F. H. HAYWARD, D.Litt., M.A., B.Sc. In two parts for pupil's use, each containing 80 and 76 pages respectively, with strong paper cover. Crown 8vo. Price 6d. each.

Complete in one volume, together with additional matter for the teacher. Crown 8vo. Cloth. Price 1s. 6d.

This work is intended for class use, and aims at the direct teaching of composition on a definite plan by a series of carefully devised and progressive exercises. These are designed to correct the faults most frequently found in children's composition, both oral and written.

It forms the basis for the teaching of children of all ages, and yet leaves plenty of scope for originality on the part of the teacher.

A REGIONAL GEOGRAPHY OF THE SIX CONTINENTS.

BOOK I.—EUROPE.

By ELLIS W. HEATON, B.Sc., F.G.S. Crown 8vo. Cloth. 128 pp. With 45 Maps and Diagrams. Price 1s.

Book II.—ASIA—is now in the press, and the remaining volumes of the series will follow in due course.

ENVIRONMENT: A Natural Geography.

By G. R. SWAINE, F.R.Met.S., Geography Master at the Manchester Warehousemen and Clerks' Schools. Crown 8vo. Cloth. 224 pp. Price 1s. 9d.

The World in Natural Regions treated under the following sections:—

- I. The Polar Regions. III. The Warm Temperate Regions.
- II. The Cool Temperate Regions. IV. The Hot Lands.

The aim of the book is to show the intimate connexion between man and his geographical environment, and special attention is paid to the climatology, structure, and general physical conditions of each region. The origin and development of towns is fully dealt with, and the influence of environment on plant and animal life is made a special feature. Original maps, illustrative sketches, and photographic plates are frequently interspersed.

BOOK WAYS.

An Introduction to the Study of English Literature.

By EDITH KIMPTON, M.A., A.K.C. (Author of "The Story Thread"). Crown 8vo. Cloth. 296 pp. Price 2s.

This book has been written in response to inquiries for a work similar to "The Story Thread," but of a more advanced character. Overlapping has, therefore, been avoided wherever possible. The book is so designed that it may be used either as a textbook or as a reader, but it does not profess to be exhaustive.

"Book Ways" is, daringly perhaps, brought up to present times. "A really delightful and enticing entrance into the realms of literature."—*The Head Teachers' Review*.

A DIGEST OF BRITISH HISTORY.

By S. H. M'GRADY, B.A., with an introduction by OSCAR BROWNING. Crown 8vo. Cloth. 341 pp. Price 2s. 6d.

Also obtainable in three parts as follows:—Part I, B.C. to 1485; Part II, 1485 to 1789; Part III, 1789 to 1912. Price 1s. each.

Mr. OSCAR BROWNING says:—"I can conscientiously recommend it, both to teachers and learners. The first will find it an excellent syllabus for oral teaching, without which no efficient instruction in history can be given, and the second will find it useful in revising what they have been taught, and in breaking new ground for themselves. For these reasons I venture to predict for it a wide circulation."

A COMPARATIVE GEOGRAPHY OF THE SIX CONTINENTS.

By ELLIS W. HEATON, B.Sc., F.G.S. Crown 8vo. Cloth. 219 pp. Price 1s. 9d.

Containing 119 Maps and Diagrams, all new and specially drawn for this work, and 10 Full-page Photographic Plates. Treated under two main divisions—(a) The Three Northern Continents; (b) The Three Southern Continents.

"Mr. Heaton's 'Scientific Geographies' are already well known to and much appreciated by teachers, but it is doubtful whether he has yet done anything more strictly geographical on comparative lines than the little work before us. Environmental, more especially climatic, conditions are never lost sight of, and the book has a great deal to say which is most suggestive. Several of the diagrams must prove very useful: we refer especially to Figs. 12, 13, 14, 15, 16a, 16b, 27, 34, 58, 60, 61, 62, 66, 67, and 68. A new feature in Mr. Heaton's books is the insertion of photographic illustrations."—*The Scottish Geographical Magazine*.

Edited by Prof. HERFORD, Litt.D. The best and most widely used edition of Shakespeare for School purposes. Price **1s.** and **1s. 6d.**

A New Series correlating History and Geography on the most modern lines.

LANDS AND THEIR STORIES.

This series of books embodies an attempt to provide a fully correlated scheme of History and Geography teaching. The subjects are not only naturally related, but to a great extent supplementary, History supplying the element of human interest, and Geography insisting on those causal connexions so easily lost sight of in the general interest aroused by History. To utilize this relationship for the better teaching of these kindred subjects, History and Geography are in this series brought together in a combined course.

IN SEVEN BOOKS.

Beautifully Illustrated Prospectus, giving full particulars of the Series, post free on application.

Prospectuses giving full particulars of above books will be sent post free on application.

NEW CLASS BOOKS

FOR

LOWER FORMS OF SECONDARY SCHOOLS

AND

UPPER FORMS OF PREPARATORY SCHOOLS

Preliminary Arithmetic. By AUGUSTUS BARRACLOUGH, M.A., Second Master at Bournemouth School. 1s. 6d. With Answers, 1s. 9d.

This book provides a course of Arithmetic suitable for pupils of ten to fourteen years of age. Great pains have been taken to set the methods out as clearly and concisely as possible.

"The chapters are clearly written, carefully arranged, and accompanied with a plentiful supply of examples and exercises."—*School Guardian*.

"Quite admirably suited for its purpose."—*London Teacher*.

Preliminary Chemistry. By H. W. BAUSOR, M.A., late Scholar of Clare College, Cambridge. 1s. 6d.

A course for beginners dealing with the leading principles of chemical theory.

"Nothing is taken for granted; everything is carefully and simply explained."—*School Guardian*.

"A clearly described and interesting course of Preliminary Chemistry for use in the lowest forms of schools."—*Education*.

Preliminary English Course. By A. M. WALMSLEY, M.A., late Senior English Master, Middlesbrough Boys' High School. 1s. 6d.

A beginner's course in Grammar and Composition based mainly on inductive methods.

"An English Grammar embodying in general the recommendations of the Joint Committee on Grammatical Terminology. Unnecessary matter is excluded and the author has kept in view the real aim of grammar, namely, 'the production of good English.'"—*Athenæum*.

Preliminary History of England. By M. K. ELLIOTT, Girton College, Cambridge, and M. S. ELLIOTT, B.A. 2s.

This book is intended for the use of learners of the ages of 10 to 13, and will in addition to political history deal fully, though in an elementary way, with those social and economic questions to which modern history teaching now rightly attaches such importance.

Preliminary French Course. By H. J. CHAYTOR, M.A., Head Master of Plymouth College, and H. E. TRUELOVE, B.A., Modern Language Master at Plymouth College. 1s. 6d.

A beginner's course, containing Grammar and Translation from and into French, with provision for Oral work.

"This Elementary course supplies an excellent first year's work, well arranged on systematic lines, with due regard to the advantages of the Direct Method, and also to the necessity for thoroughness in the acquisition of the language. Free use is made of black type for emphasis."—*Athenæum*.

Preliminary Geography. By E. G. HODGKISON, B.A., Assistant Master, County Secondary School, Crewe. 1s. 6d.

A book for beginners, containing Elementary Physical Geography, and outline of the Geography of the World, and the Geography of the British Isles in detail.

"This book bears the stamp throughout of the skilful practical teacher who combines a sound knowledge of his subject with an equally sound knowledge of the needs and capacities of the pupils for whose use the book is intended."—*Teachers' Times*.

Gospel of St. Luke (Preliminary Edition). Edited by Rev. J. F. RICHARDS, M.A., and Rev. T. WALKER, M.A. 1s.*

"The Introduction, consisting of 36 pages, contains full but strictly condensed notes on the text, date, purpose, and characteristics of the Gospel, as well as a careful analysis—altogether a very complete and workmanlike edition."—*Secondary School Journal*.

Gospel of St. Mark (Preliminary Edition). Edited by Rev. J. F. RICHARDS, M.A., and Rev. T. WALKER, M.A. 1s.*

"Teachers, especially in junior forms, will find this a useful book. The introduction and notes are brief and to the point."—*Preparatory Schools Review*.

Gospel of St. Matthew (Preliminary Edition). Edited by Rev. T. WALKER, M.A. 1s.*

* With Introduction, Notes, and Maps.

IDOLA LINGUARUM.

MODERN LANGUAGES.

THE DIRECT METHOD: AGAINST.

By OTTO SIEPMANN.

They had succeeded in discrediting the study of modern languages. W. represents the reaction against the new realism. His love for scholarship was one impulse, but an antagonism to the prevalent views on education was also ever present. The presumptions and ignorance of the New Methodists irritated him, their growing popularity alarmed him. He could not have conceived so completely his ideal of human culture, had it not been brought out in sharp contrast with the school of "useful knowledge." Alluding to the promise afforded by a young pupil, he writes: This is the only kind of solace left for us who are occupied with matters which are in little esteem with the public. Every day sees the prospects of these studies more and more clouded. The new hierophants now abroad desire to preserve their disciples from all tinge of scholarship and literature, else they would no longer command their devotion.

As time goes on, the danger passes away, and W.'s language becomes more hopeful. He is not less strenuous in denouncing the main principle of the innovators—"education in knowledge of the useful"—but he is forward to welcome what is true and good in their doctrines. In later years he brings out with increasing emphasis the educational ideal which had been growing more distinct to him. This is a purely humane education and elevation of all the powers of mind and soul to a beautiful harmony of the inner and outer man. As long as there exists in the world a generation who make this elevation their aim, so long will they turn to the great authors for instruction and encouragement in prosecuting it. The simplicity, the dignity, the grand, comprehensive spirit of their works will ever make them a source from which the human soul will draw perpetual use.

THE reader of this paragraph might easily think that it contained an account of the recent movement in modern language teaching and that W. was a scholarly teacher of the

old school with pessimistic tendencies. As a matter of fact it refers to the eighteenth century and is an almost verbal quotation from an article by Mark Pattison on Friedrich August Wolf who, just a century before the reform movement in modern language teaching was started in Germany, entered the lists against the philantrophists. The reforms of Ratich, Comenius, and Basedow with his disciples had succeeded in discrediting the study of ancient languages. A reform of the grammar schools on their principles seemed imminent. What was to be taught were to be realities. Languages were to be learnt by intuitive methods. Learning was to be made agreeable to the child and all irksome studies were to be thrown overboard. History repeats itself—sometimes. The parallelism between the conflicting views and principles of the two movements is so striking that it would be interesting to show it in detail, but it must suffice to say that Wolf was triumphant. He entirely changed the spirit of the University of Halle and, through it, of all the higher education in Germany, awaking in schools and Universities an enthusiasm for ancient literature second only to that of the Revival in the sixteenth century. From this, in fact, have sprung in great part both the direction and the force which have ever since been impressed on secondary education in Germany.

The more recent controversy has raged round modern languages, it is true, but the principles involved were essentially children of the same spirit, so that a study of the eighteenth century conflict and its precursors is highly instructive and throws considerable light on the questions which have been debated for the last thirty years at many Congresses of Neuphilologen in Europe and America, and have produced a flood of articles in reviews and magazines, innumerable pamphlets and school books, so that nothing new is likely to be said or written on any of its topics.

It is, therefore, advisable now to review the whole question, to sum up the arguments, to record the experiences and results which have been reached. I will endeavour to do so *sine ira aut studio*, and strive to hold the balance fairly between the two parties. First of all, let us try to look for the causes which set the ball rolling. About the middle of last century the progress made in natural sciences and the methods employed by them rapidly rose in reputation; then followed the establishment of modern sides or schools in which mathematics, natural sciences, and modern languages were given a more prominent position than they had enjoyed before. At the same time the study of phonetics was taken up seriously and was considerably advanced by Sievers, Trautmann, Techmer, Viëtor, and others. Further, the expansion of international commerce and the unprecedented development of industrial pursuits directed attention to the importance of a practical knowledge of modern languages. And finally, the results obtained and the methods employed in teaching modern languages were scrutinized and found wanting. Dissatisfaction was great, and the time was opportune for an appreciative response to the trumpet-blast which a lecturer of the newly founded University College in Liverpool (W. Viëtor) sent forth from Llangollen in Denbighshire—*Quousque tandem*. This pamphlet, entitled "Der Sprachunterricht muss umkehren!" stirred the teaching world deeply and was largely instrumental in the creation of the reform movement which has produced what is generally known as "The Direct Method" of teaching modern languages. A whole little army soon engaged in the war which Prof. Viëtor had declared. His lieutenants caught the enthusiasm of their leader, and, though many of the combatants

have been accused of arrogant ways, aggressive methods, bitterness, intolerance, and some have been suspected of unfair means in pressing their cause, it cannot be denied that they have fought valiantly for thirty years in Germany, France, England, and the United States; and, what is more, they have not fought in vain, though the victory is not as complete as their fervour led them to hope.

What Prof. Viëtor criticized in incisive language was the treatment of living languages as though they were dead, that the pronunciation taught in schools was of the "Vaiteer!—Yes-Sir!—After zis, I vish to become a Velsh rappit!" type; that grammar was overloaded with a great deal of ballast and taught in a stupid fashion; that the pupils were bored and disgusted with the way in which they were taught; that the exercises set to learners were soul-killing; that translation into a foreign language was an art which did not concern schools. On the constructive side we were told that language teaching should begin with living sounds instead of dead letters; that the centre of gravity should lie in the reading book; that a passage read and understood should be made the subject for questions and answers in the foreign language; that the passage thus treated should be reproduced *viva voce* by the pupils, and finally written in the form of answers to questions put by the master; no preparation or learning of vocabulary was any longer to be required, no written home-work to be set; pupils were to learn to think and to express themselves in the foreign tongue; grammar was to be taught as arising out of the passages read and systematized later.

These are the tenets of the new creed which were embodied in the Direct Method, and in their crystallized form have become the battlefield on which each position has been tenaciously defended by stout-hearted champions, and every point has been advocated with energy from the housetops as a panacea for all ills of which poor teachers and pupils had suffered in the past.

There is no denying the fact that the criticisms made of the methods in vogue before the reform set in were largely justified, and, further, that this new method had obvious attractions which induced many teachers to welcome it wholeheartedly without much examination; others were sufficiently dissatisfied with the existing state of things to be prepared to give the new plan a fair trial, and others again shook their heads and stood aloof. Before long some of the champions were ready to show the great change that had been wrought in their classrooms to intending visitors, and published the striking results of their classes. And for a while it seemed as though the reformers were taking the teaching-world by storm. They gained considerable influence, brought pressure on examining bodies and educational authorities to modify their regulations and demands, so as to fall into line with the new method. But, meanwhile, opposition arose in many quarters which, with the beginning of the new century, became more and more formidable, partly owing to organized resistance and partly as the result of personal experience in the classroom. Still, opposition has, on the whole, been less noisy, less intolerant, more ready to accept what has proved practical and to reject only what has been found wanting. The silent in the land who had watched the struggle with complacency gradually began also to move slowly and modified their ways to some extent, so that it may be said of the die-hards that their number is insignificant. On the whole it is a great triumph for the reformers that practically every modern language teacher in the three largest and most im-

portant countries in Europe has been more or less influenced by this great movement, and what progress has been made in modern language teaching is largely due to their efforts and to their persistent advocacy of reform.

That the reform in its final shape will not entirely satisfy the champions of the Direct Method is perhaps not surprising, but they have gained so much by common consent that they may be proud of their achievement, unless it is true that every genuine new methodist (whole-hoggers, I believe they call themselves in this country) considers himself infallible. Be that as it may, it is now tolerably clear that the large majority of modern language teachers and educational authorities are satisfied that the Direct Method in its pure form has proved a decided failure, and stands convicted of having promised more than it could perform. The same fate befell Ratich, who in many respects may be looked upon as a distant ancestor of the Direct Method. He, too, was the apostle of a new method, and his gospel, too, found a ready response in many quarters. By Prince Lewis of Anhalt-Koethen he was given his chance of proving his case, but he failed sadly, though he, too, originated some sound reforms which have stood the test of time. Ratich was thrown into prison and not released until he had signed a document that he had undertaken more than he was able to fulfil—that he was a charlatan. I am not trying to frighten anyone; besides I firmly believe that a genuine new methodist cannot be intimidated.

My somewhat sweeping condemnation of the Direct Method needs, of course, substantiating. In endeavouring to do so I do not propose to call many witnesses, but hope to make out a case from my personal experience. Hard words have been said of the Direct Method by bitter opponents, which must not be taken to mean more than that their authors' feelings and convictions were deeply offended. I will quote only one of this kind which occurs in a book written by a Balliol scholar and former head master:—

The latest improvement in the method of teaching French and German consists in eliminating as far as possible every vestige of scientific study, and everything which can give the victims training or education of any sort; the aim is to make them talk French or German by a sort of reflex action, as a dead frog can be made to go through the motions of scratching himself. We may hope that this particular futility will have only a short life, but while it exists, and where it is in force, French and German have ceased to exist as instruments of education.

I am glad to say that teachers who share my views on this question have, as a rule, not adopted the tone in which this criticism is written, and that in spite of considerable provocation on the part of advocates of the Direct Method, of some of whom it has been said that what they did in their zeal of pushing the method was not "cricket."

A carefully thought out criticism of language teaching contained in the Report of the Committee of Twelve of the Modern Language Association of America (Boston, Heath & Co., 1901) makes some observations which are in agreement with the opinions formed by many practical teachers. I will, therefore, quote a few of them:—(1) In our general scheme of secondary education the ability to converse in French or German should be regarded as of subordinate importance. We by no means say that it should be ignored, or that colloquial practice may safely be neglected in teaching. (2) The careful study of grammatical rules and their nice application in translation and compilation form one of the best possible exercises in close reasoning. (3) This method is based on two general ideas—one true, the other false. The first is the belief that the interest so necessary to the successful prosecution of any study can most easily be aroused by the actual spoken use of the foreign tongue. The second is the theory that a boy or man can best learn a new language in the manner in which an infant first acquires its native speech. We may justly urge, furthermore, against this style of teaching, that it provides little discipline for the intelligence, that it favours vagueness of thought and imprecision of expression. (4) It seems to overlook the

importance of literary education, æsthetic culture, and the intellectual broadening of the mind.

The chief objections to the Direct Method, such as they have presented themselves to me in the classroom, are as follows:—

1. The importance of the spoken language is exaggerated and fluency cannot be acquired in the classroom.

Even from a purely utilitarian point of view it may be said that the majority of our pupils stand in need in after-life of a good working knowledge of French and German for the purpose of reading articles and books, and that only a small percentage require facility in speaking foreign tongues. The amount of knowledge and practice needed for conversation with natives of France and Germany can be imparted without going to the length of making a fetish of the spoken tongue. Moreover, an Englishman thoroughly conversant with the ready application of the chief rules of grammar and equipped with a wide vocabulary, a good pronunciation, and some practice in speaking, can, if he so desires, in a short time increase the fluency of his speech by a stay abroad. Further, even if correct and fluent speaking were the supreme goal it could not be reached in class teaching, nor without a careful study and much systematic practice in the application of grammatical rules. What I have invariably found in classes taught on the Direct Method is that, owing to the absence of sufficient knowledge of grammar and its ready application, the speaking was lamentably incorrect, often so much so that it would have been impossible to understand the sense of what was said, without knowing English. I am satisfied that, apart from the insuperable difficulties presented by class teaching, fairly correct speaking of French and German cannot be learnt by the Direct Method, even if two hours a day were given to the task, if the pupil is to acquire his knowledge by the process of repetition and imitation until it becomes spontaneous.

Anyone who knows how long it takes a child of school age who is placed abroad in a family to acquire a ready command of a foreign tongue, will at once admit that even in the most favourable circumstances it takes years of constant practice, and if the imitative process is not supplemented by a good deal of careful teaching and reading the result will even then fall short of correctness in a palpable degree. This touches upon a vital defect in the Direct Method by which alone it stands condemned. The notion that a foreign tongue can be acquired at school by direct association with objects or pictures or concepts already connected with native expression, is as fundamentally wrong as it is attractive at first sight. Apart from the fact that it is utterly impossible to proceed by the Direct Method with things and thoughts which are already familiar to the pupil, without the intervention of the mother tongue, the spontaneous formation of correct grammatical forms and constructions cannot be brought about without its passing for a considerable time through the process of reflexion. Only after much practice of those forms and constructions which have to be learnt and drilled one by one, *through the understanding*, can their use become spontaneous. If the same is to be done by imitative practice alone and without this careful and gradual process, the result, I think, will always remain slipshod, however much time is given to the subject. At any rate nothing but a thoroughly unsatisfactory result could be attained with the time at our disposal at school. I have applied the Direct Method in the classroom with pupils of all ages between ten and nineteen, and have been disappointed with the results even in this one direction in which, at any rate, I had hoped it would prove successful. On the other hand, I have used the Direct Method with wholly satisfactory results with little children as long as their powers of reasoning were not sufficiently developed to make an appeal to their intellect advisable; but, even in their case, I found that later on incorrectness and faulty constructions were most easily cured by appealing to their understanding and by explaining to them the why and wherefore of the particular case. As soon as the reasoning faculties are sufficiently active they should be made use of for

two reasons: (1) they help to overcome difficulties in the shortest and quickest way, and (2) they become stronger through use—"en forgeant on devient forgeron."

Finally, I would urge on the point under discussion that ability to speak a foreign language—*qua fluency*—is a matter of practice, not an intellectual feat. It is true that the amount of practice required before one can speak fluently is very considerable, but it is a technique just as is the ability to telegraph or to write shorthand. By this technique is acquired what is falsely called "thinking in a language." Thought and language are not identical, though closely connected. If we think in a language, why is it that we frequently say something and then immediately add, "No, that's not exactly what I meant to say," and then try once more to give expression to the thought which was in the mind all the time? School-time is too precious to be spent wholesale on such a technique as fluent speaking, though it is of sufficient importance to claim some of our time. A certain facility can be acquired in a comparatively short time, but real facility or fluency demands a terrific amount of practice and time, as modern language masters of all people ought to know.

II. Grammar taught in a desultory manner and without introducing and practising its carefully graduated phenomena, one by one, leads to slipshod results.

The reformers were no doubt right in denouncing the way in which grammar used to be taught, but they shot straight from the Scylla into the Charybdis by assigning it a place which proved fatal to the whole fabric. Some of them saw this and mended their ways to some extent, but, even so, the blot in the system still remains. As long as the reading of beginners and junior forms forces the teacher either to explain a variety of heterogeneous grammatical points or to leave the greater part of them unexplained and to be learnt by rote, the uncertainty and confusion created in the pupils' minds will remain a serious defect of the Direct Method. The learning of imperfectly understood forms or constructions must always remain a doubtful practice, and whenever it does occur should be kept within strict bounds. But whatever the Direct Method teacher may do, this question of grammar remains a stumbling-block for him, because it does not properly fit into the method anywhere, and ought to be excluded if the method were consistently carried to its logical conclusion, which is that the language should be learnt by observation and habit, as one learns one's mother-tongue. There is, of course, another objection to grammar arising from another article of creed in the Direct Method: the teaching is to be made pleasant and attractive and full of interest to the learner. To this every teacher will agree within limits. But if grammar is declared to be dry and uninteresting I demur and agree with Prof. Calvin Thomas, who says: "When shall we see the end of this wretched desire to make all things soft and sweet for the youths and maidens of this generation? Grammar deals with the facts and the laws of language, and language is the most important of all human institutions. Whatever interest, whatever charm attaches to the study of any historical science ought to attach to the study of language. The facts of grammar are as interesting as any other facts, and the laws of grammar are as interesting as other laws. . . . Let them learn the grammar and learn it well. It will be good for them. If the teacher has the instincts of a scholar himself, the facts of language will not seem dull or uninteresting to him; and if they do not seem so to him, he will usually contrive that they shall not seem so to his pupil." I venture to repeat here what I have already said above, that grammar cannot really be learnt unless it is widely practised in small doses and systematically in homogeneous groupings. The best way of driving it home is no doubt in connexion with a large number of examples occurring in the reading, from which we agree the teaching of grammar ought to take its start; but, if the examples are few and a great many points are to be dealt with at a time, the result will be confusion and slovenly work.

(To be continued.)

EDUCATION IN THE PERIODICAL PRESS.

Biology in Relation to Education. *Athenaeum*, April 25.

A series of three lectures by Miss Hoskyns-Abrahall at Crosby Hall. The second and third lectures are to be in following issues.

Children's Clothing, Reform of. By Theresa La Chard. *Englishwoman*, May.

Deals with the clothing of elementary-school children, &c.

Children's Courts in Hungary. The treatment of juvenile offenders.

By Douglas Pepler. *Daily News*, May 8.

Compulsory Continuation Schools. *Manchester Guardian*, April 28. Short leading article.

Educational Progress of Rural Russia. *Vestnik Evropy*, March.

Health of the Child: (2) the Child under School Age. By Christopher Addison. *Nation*, April 25. (3) The Child at School. May 9.

Deals with elementary, &c. schools.

How we Educate: the Sweating of Teachers. By L. G. Chiozza Money, M.P. *Daily News*, April 22.

If Youth but Knew. *Book Monthly*, May.

Reviews of books by Board-school children.

Incidence of Pulmonary Phthisis among Children of School Age. By Balfour Nicholson. *Medical Officer*, May 2.

King at the Leys: the Free Churches and Public Schools. By H. Wilson Harris. *Daily News*, April 29.

Latest Development in the Teaching of the Blind. *Strand Magazine*, May.

Deals with the Sunderland Museum methods of Mr. Charlton Deas.

Lesser Catechumen: a Condemnation and a Suggestion. By Sir James Yoxall. *Daily News*, May 12.

Religious teaching in schools.

London School of Oriental Studies. By F. H. Brown. *Westminster Gazette*, May 4.

London University: External Side. By Holford Knight. *Contemporary Review*, May.

Mannerless Women: a Disappearing Class. By St. John G. Ervine. *Daily Chronicle*, May 2.

Defects of former education.

National Importance of Higher Scientific Education. By Principal Griffiths. *British Review*, May.

New Ideas of Education. *Nation*, May 9.

Surveys the field.

Oriental School for London. *Daily Telegraph*, May 18.

Our Educational System: the Employment of School Children. By Egbert J. W. Jackson. *Highway*, March.

Physical and Military Training for Cadets and Undergraduates. By T. F. C. Huddleston and J. H. Colson. *Nineteenth Century*, May.

Printing Technical Schools, a few Facts about. Need for closer association between the printer and the technical classes. *British and Colonial Printer and Stationer*, April 30.

Report of the Board of Education. *Local Government Chronicle*, May 2.

Leading article.

Royal Commission on Civil Service: Examination Reform. By R. F. Cholmeley, M.A. *Daily Telegraph*, April 30.

The writer is Head Master of Owen's School, Islington.

School-day Recollections. By Jack Jaggs. *Millgate Monthly*, May.

Chiefly Christ Hospital thirty years ago.

Seeing Eye: Drawing and Technical Education. By T. R. Ablett. *Daily News*, April 28.

The writer is founder and Art Director of the Royal Drawing Society.

Sense of Humour in Children. By a Head Mistress. *Evening News*, April 29.

Shrewsbury. Out-Esued Demos and Patrician Brigands VIII. By Harold T. Wilkins. *Millgate Monthly*, May.

Technical Education and Trade Training. *British and Colonial Printer and Stationer*, April 23.

Technical Education in Edinburgh: Printing Course. *British and Colonial Printer and Stationer*, April 30.

Training of Teachers: Report of Board of Education. *Guardian*, April 24.

Vocational Guidance and Efficiency. How boys are started aright in life. By Benjamin C. Gruenberg. *Scientific American*, April 11.

"The schools have been remiss in that they have not with sufficient alacrity adapted themselves to the changing conditions of social and economic life."

What shall we Teach the Children? *Challenge*, May 1 and following. Zurich, New University of. By G. *Nature*, April 30.

UNIVERSITIES AND SCHOOLS.

LONDON.

Sir Philip Magnus made a notable suggestion in his speech on Presentation Day (May 13). Some five years have elapsed, he pointed out, since the appointment of the Royal Commission, and during that period of suspense, the University has been unable to appeal for funds for developments urgently needed. He suggested that a Committee of the Senate should be appointed to consider, without prejudice or bias, the recommendations of the Commission with a view to deciding which of them could be adopted with or without legislation. This suggestion reflects a growing feeling that reform—to use a phrase familiar in the older Universities—must come from within.

The Principal's report for 1913-14, which was read on the same occasion, in accordance with established custom, showed a slight decrease in the total number of candidates for examinations from 12,455 in 1912-13 to 11,920 in 1913-14, the falling off being most marked in the statistics for matriculation and registration, which may probably be explained by the growing success of younger Universities in the provinces. The number of candidates for internal degrees (900) is a few less than for external degrees (907). Next year will probably show for the first time an excess in favour of the internal side. The total number of internal students is now 4,888, as compared with 4,664 last year. The list of benefactions, which is not very exhilarating reading, includes £1,000 from the late Lord Avebury, and the gift of an estate at Loughton from Mrs. Keddey Kay Fletcher, of the annual value of £275, for the endowment of post-graduate science studentships. Several benefactions have also been received by University and King's Colleges. As to the discussions concerning possible new sites for the University, Sir Henry Miers had nothing to report beyond what has already appeared in the public press; but he was able to give an assurance that the manifold activities of the University have not only been fully maintained, but have increased and developed in many directions.

The Higher Education Sub-Committee of the London County Council have presented an important report to the Education Committee on the recommendations of the Royal Commission—generally favourably to the Report—and declaring specifically that no scheme for the reorganization of the University will be satisfactory which does not provide that the Senate shall have full and effective control, both educational and financial, over the work of the University in its constituent colleges. It is proposed that existing Acts and Charters should be over-ridden, if necessary, by the decree of this all-powerful Senate. On this understanding it is regarded as essential that the Imperial College should become a constituent college of the University. Further, the Senate should not be a representative body, the Sub-Committee agreeing with the Royal Commission that experience has shown that a body made up of representatives of a number of different interests is incapable of formulating a united plan of action. Some amendments are suggested in regard to the constitution of the faculties in the direction of widening the scope of the representation of teachers. Although existing safeguards in respect of colleges are to be ignored, the admission of external students to all examinations, except in Medicine, is to be definitely assured. Under certain conditions the management of the London Day Training College is to be transferred to the University. On first reading the report appears to be full of inconsistencies. Its aim seems to be to impose on the University a type of bureaucratic control which is apparently favoured in the local educational administration of London. Nor is the pill gilded as might be expected, for the recommendations are subject to the condition that in the present financial circumstances the Council cannot undertake to incur additional expenditure on University education in London.

Prof. E. G. Coker, D.Sc., of the Finsbury Technical College, has been appointed to the University Chair of Civil and Mechanical Engineering, tenable at University College; and Dr. Frank Horton to the Chair of Physics, tenable at Royal Holloway College.

The vacancy on the Senate, due to the resignation of Dr. Senter as the representative of science graduates, has been filled by the election of M. O. Forster, D.Sc., F.R.S., the nominee of the Graduates' Association, who received 796 votes against 293 cast for his opponent, Dr. Forster Morley. Both candidates favoured the retention of the external degree. Dr. Forster declared himself strongly opposed to some of the recommendations of the Royal Commission, particularly the withdrawal from Convocation of the right to elect members of the Executive Senate, whereas Dr. Morley preferred to say nothing on these questions.

The Annual Dinner of the Graduates' Association was held at the Criterion Restaurant, on May 12, Lord Moulton presiding. A large company assembled, full of enthusiasm for the cause, enthusiasm which must have been damped somewhat by a series of dull speeches throwing no new light upon questions as to which the company had

already made up their minds. Lord Moulton was witty and emphatic as usual. His relation of an incident during his evidence before the Royal Commission was especially amusing. Anyone who reads the evidence will see that the Commissioners must have found his lordship a hard nut to crack. His opposition to the recommendations of the Royal Commission is unequivocal, and he advised graduates to use every possible influence on candidates for Parliament at the next general election. Certainly the Association, cheered by Dr. Forster's success, is in good fighting trim.

OXFORD.

We have, so far this term, had a welcome rest from contentious legislation. The Responsions Statute has been delayed, presumably in order that Council might review the financial changes made necessary by the new method of conducting the examination. With the announcement of new amendments, mostly of a drafting character, to be proposed by Council to the Senate, comes the announcement for proposed changes in the fees. It is the second proposal for raising fees we have had this term. A Statute for raising the fees of candidates in Moderations passed Convocation at the beginning of term. Protests were made against the Statute in the name of the poor man, but the Statute passed, and the process of raising fees is, on the whole, likely to continue. As things stand, the University cannot get on with less money than it already gets in fees of all kinds. Indeed, the enormous growth in recent years of Diploma and Special Courses has greatly increased the administrative and teaching expenses of the University without gaining it anything like a corresponding increase in fees. If, as the result of the Plural Voting Bill, the University franchise becomes of no value, a smaller proportion of men will take their M.A., and the University will have to make up the loss somehow. The usual argument in favour of degree fees is that they are a form of deferred payment. The argument has something in it, but a deferred payment which falls on a minority and cannot be enforced has not much to be said for it. The University, then, will be justified in raising fees for examinations and University degrees so long as this rise is accompanied by a decrease in degree fees. If this is done we may even be able to escape the disgrace of selling our M.A. degree. In the meantime the question of the expensiveness of life at Oxford has been raised in another form by the establishment of the University Co-operative Store, which I mentioned last month. In spite of a vigorously organized opposition on the part of Oxford tradesmen the Store seems to be flourishing. There is a feeling in some quarters that co-operation is all very well for the poor, but is not "for the likes of" undergraduates. The supporters of the new movement hope most for what might be done for the country if the ideal of co-operation permeated all classes of society as thoroughly as it seems to have done in Ireland. They also claim that they are doing something practical for the poor man. What hope there is of this contention proving true, it is difficult to say. It is hard to know how expenses at Oxford could really be reduced. College bursars do their best, and if some colleges are more expensive than others that is largely because some are better endowed and hence do not need to get the entire cost of their kitchen and establishment from undergraduates. The real difficulty is in running cheaply a communal life for men, some of whom are very rich and have an expensive way of living. Much of the expensiveness of our Oxford career is unnecessary and can be avoided by the man who determines to be careful and look after little things. If, therefore, the Co-operative Store does anything to inculcate a habit of carefulness and cash payments in undergraduates, it will perform a much more valuable service than it would by merely helping to keep down the prices of various articles. No doubt if the University could insist on a higher standard of work, and could keep out the idle rich (though not only the rich are idle or stupid) the problem would be easier, but the industrious rich whom no one would wish to exclude will keep up the standard of living. The common life which prevails in colleges is a precious thing and, on the whole, it seems better to hope that colleges may be able to increase their secret exhibition funds than that anything will be done which might separate the poor and the rich.

Within the last few weeks we have had a lurid example of the evil of one luxury of the rich undergraduate. Five undergraduates going in a motor for what is, in grim irony, called "a joy ride," collided at about 11 o'clock at night with three working men bicycling home about six miles from Oxford. One of the cyclists was killed, the other two were injured. The owner of the car, who was driving, admitted that he was going at twenty miles an hour. Some of the evidence pointed to a much higher speed. The Coroner's jury, after a long inquiry, released the owner with a censure. To anyone who sees motor-cars racing out from Oxford at night the wonder is that something like this has not occurred before. The Vice-Chancellor and Proctors announce that they intend to take away the licence of

any undergraduate who is condemned for excessive driving. The *Magazine* suggests that they might, in the meantime, make some money for the University by taxing motor-cars. It would be better if they considered the advisability of forbidding them altogether. The motor-car has broken down the discipline of the University. Its elaborate regulations still fall on the poor man who walks down the High at night without a cap or gown, but are eluded by the rich owners of cars. I can think of no reason why an undergraduate could be said to need a motor-car while he is in residence. There are many reasons why he should not have one.

ST. HILDA'S HALL.—The Council of St. Hilda's Hall, Oxford, has awarded the following Scholarships, tenable for three years:—An Open Scholarship of £50 per annum to Miss H. M. Leys (private work) in English. An Open Scholarship of £30 per annum to Miss Y. Barclay ("Fontainebleau," Bournemouth, and private tuition) in History. *Proxime accessit* Miss M. Towers (Richmond County School) in English. The Dorothea Beale Scholarship of £50 per annum (for pupils of the Cheltenham Ladies' College) to Miss G. V. Pocock in History.

CAMBRIDGE.

It seems a long time since I wrote—largely because an Easter Vacation, if it is a busy one, interposes a good many interests and makes time seem long in retrospect however quickly it passed. At the end of last term, when I wrote last, the vote was impending which was to decide whether we were to apply for State Aid and turn pensioners of this Government about which I hear so many things. There was a majority which thought £4,700 was too much to let go—even if it was nebulous—"the hope of the promise" of it, to use Mr. Balfour's inspiring phrase. So Cambridge is to have a subsidized Medical School, if the Government is kind; and let us hope that there will never be a government worse than the present one, and that we may never know the desperate fortunes and changes that have befallen American Universities ere now—especially in their departments of Political Science—and a Canadian University, which I know, where the sudden withdrawal of grants all but precipitated utter ruin—or that University in Australasia where the State ruled, though its rulers decided that Mr. Aldis could profitably be replaced by a cheaper Mathematician.

Some of your readers may remember how some three years ago we had to vote upon a scheme of altering fees in such a way that the cost of a man's M.A. was met or mostly met by a capitation fee paid during his undergraduate days. Another such scheme is before us. It appears that despite the rise in the number of Matriculations, the men who proceed to M.A. grow fewer. Twenty years ago some 403 (to take an average) took the degree; in the last ten years the average number fell to 376; and in the last five, to 368—a smaller and smaller percentage of those who actually take B.A. It is feared by some that, if the Plural Voting Bill become law in the shape in which it passed the House of Commons last year, it will adversely affect the numbers of those who take M.A., and with them both the graduates' capitation tax and the composition fees. How far this fear is well based, nobody can say; I should doubt if there is much in it, but there may be something, and the report on the matter suggests that it may even be disastrous. So it is proposed to raise the undergraduate fee to 35s. per term of residence up to nine terms, and to lower the B.A. fee in general (*i.e.* for Days of General Admission) to £3, and the M.A. fee also to £3. No real opposition was raised at the discussion in the Senate, and it is not now very likely that there will be any.

Your readers may have seen in the *Times*—for some of the papers did not mention it—the forlorn appearance of the Bishop of Durham in the House of Lords against the opening of Divinity Degrees. Wicked Radicals, it is possible, may have hoped he would carry the Lords with him; as it was, it was a sorry affair, which will be long regretted by the Bishop's friends. His whole course in this matter has been peculiar. When Durham University voted to open the degrees, the Bishop came in as Visitor and vetoed it on the ground that in such a matter Oxford and Cambridge should lead. Cambridge did lead, and the Bishop appears in the House of Lords to stop it. It does not look very pleasant to the lay mind, and it is an easy, though unwelcome, guess that the Bishop has been made a cat's-paw by the same opposition which forced two votes upon us when one was decisive. Rumour says that the next move is to be a proposal to abolish the D.D. altogether. I do not know what authority there is for this. In any case, it is understood, the Syndicate appointed a year ago to revise the Ordinances for the Divinity Degrees—it

(Continued on page 412.)

HORACE MARSHALL & SON'S NEW BOOKS.

PRÉCIS WRITING FOR SCHOOLS. By C. L. THOMSON. Price 1s. 6d.

This book contains about a year's work in Précis for beginners. The exercises are all of a literary character and are adapted to the needs of pupils in the fourth year of the ordinary Secondary School Course.

[Ready shortly.]

POEMS FOR COMPARATIVE STUDY. By T. EATON FEASEY, of Rainmoor County School (the University Demonstration School), Sheffield. Price 1s. 6d.

[Ready shortly.]

PROSE TEXTS FOR JUNIOR FORMS. Edited by C. L. THOMSON.

THE PILGRIM'S PROGRESS. Part I.
GULLIVER'S TRAVELS.

LEGENDS OF EARLY SCOTLAND.
SIR ROGER DE COVERLEY.

LEGENDS OF EARLY ENGLAND. (Chiefly from Freeman's "Old English History.")

LEGENDS OF EARLY ROME. (Chiefly from Arnold's "History of Rome.")

THE PILGRIM'S PROGRESS. Part II. [Ready shortly.]

ROBINSON CRUSOE. do.

RIP VAN WINKLE AND SLEEPY HOLLOW. do.

LIVES FROM PLUTARCH (Dryden's Translation). do.

ENGLISH: A MODERN GRAMMAR. By G. H. CLARKE, M.A., and G. T. UNGOED, M.A.

A work based on recent studies in the Grammar of modern English, and useful for middle and upper forms. Price 2s. 6d.

CHILDREN'S SINGING GAMES. Music by ALBAN DOBSON, B.A.; Words by LETTICE THOMSON.

A Collection of Songs with Action, suitable for use in Kindergartens. Price 1s. 6d.

A FIRST BOOK IN ENGLISH LITERATURE. By C. L. THOMSON.

A simple History of English Literature, with typical passages from that Literature. Much care has been given to the many illustrations. In 6 Parts. Price 2s. and 2s. 6d. per volume.

INDEXING AND PRÉCIS WRITING. By R. V. N. HOPKINS, B.A., late Scholar of Trinity College, Cambridge.

Suitable for Civil Service and other Examinations. Price 2s.

THE NEW LATIN DELECTUS. By W. JENKYN THOMAS, M.A., and E. P. DOUGHTY, M.A.

Part I. Price 1s. 6d. Part II. Price 2s. 6d. Beautifully illustrated.

The Delectus is intended for the earlier reading of boys and girls who learn Latin, especially in schools with a leaving age of about sixteen.

ENGLISH HISTORY IN ENGLISH POETRY. From the French Revolution to the Death of Queen Victoria. By C. H. FIRTH, M.A., LL.D., Regius Professor of Modern History in the University of Oxford. Price 2s. 6d.

From the French Revolution to the Death of Queen Victoria. By C. H. FIRTH, M.A., LL.D., Regius Professor of Modern History in the University of Oxford. Price 2s. 6d.

HISTORY BOOKS:

COLONIAL HISTORIES: Australia, Canada, India. Price 1s. 6d. each.

ILLUSTRATIVE HISTORIES.

GENERAL HISTORY: Ancient History, Mediæval History, and Modern History. Price 2s. 6d. each.

LITTLE FRENCH FOLK. By C. T. ONIONS, M.A., Author of *English Syntax*. Price 2s.

RÉCITATIONS ET POÉSIES. With Phonetic Transcript Edited by VIOLET PARTINGTON. With over 60 charming Pictures. Price 2s.

This is a collection of simple French Poetry and Rhymes for beginners.

New Illustrated Catalogue post free on application.

London: Temple House, E.C., and 125 Fleet Street, E.C.

is the King who has the last word on Statutes—are very nearly ready with their report, at which they have been steadily at work all the winter.

The group who wanted to exact military efficiency of every man who aspired to B.A., are still at work. Their political sapience was indicated by their innocent idea that railway companies insist on military training as a qualification for promotion among their employes. However, they have gone on collecting names, and now boast 1,700 odd—which they have not so far seen fit to print. They did their best with a selection, which (like patent medicine proprietors who get a testimonial from a "Master of Arts") they improved by printing "Doctor" at full length in front of a number of names. There were erratic men of genius among the lists, a small number of distinguished non-residents, and the rest were naught. What the 1,700 will be like one cannot guess. A counter list is issued of those who, without expressing any opinion on the larger question of the State exacting compulsory service, deprecate the University trying to do any such thing; and it contains out and away an overwhelming proportion of the real leaders in thought, research, and government in this place—residents too. Cambridge, by the way, has been invited by one of the promoters of this scheme to protest against "the pogrom Home Rule Bill" by a tremendous meeting on Parker's Piece. It was held, but the University in general was too busy to go. It was a little affair, but again an indication of how the academic mind can muddle politics. What is a pogrom, and what has it to do here? Meantime "Doctor" R. Kipling, Hon. LL.D. Cambridge, has delivered what is left of his soul on the matter. The want of balance just now in educated opinion is really very remarkable.

Amongst other things in the *Times* of late, we have been told a good deal about the undergraduate mind, how empty it is of everything but athletics, and how the gap ought to be filled by the intellectual stimulus of being drilled by a colonel. At the risk of annoying any schoolmaster who may dip into your columns, I venture to think they don't really know very much of what the undergraduate is doing. In Mr. Eden Phillpott's amusing book "From the Angle of Seventeen," the boy, after a year in London, remarks how curiously his headmaster seems to have shrunk. I think it happens here. (I daresay, after they go down for a while, they may have the same feeling

about the dons.) But, really, athletics are not the one and only theme. Now and then I have tried to tell your readers what a lot of things go on here—and I doubt if I have mentioned athletics. When one realizes the activities of the Heretics, the Fabians, and the *University Magazine*, one is surprised to be told by non-residents that our men talk only athletics—well, perhaps, they do to you, but we find other topics here, and plenty of them. Just now the Bishop of Zanzibar has been here, and though I gather he has not been talking about athletics, there has been no lack of audience for him.

The death of Mr. Aldis Wright removes a great figure of the past.

For the last year or two he was hardly seen by Cambridge, but for long he was a familiar sight—well-groomed, and with precision written in every line of garb and feature. His work as an English scholar needs no mention here. It is worth remembering that he was one of the first three Dissenters to be admitted to a degree in this University—Judge Bompas and Mr. W. H. F. Johnson, the Cambridge schoolmaster, were the other two. Mr. Wright had a long life, and just as it ends the last of the closed degrees are being thrown open.

WALES.

The extra collegiate meeting of the University of Wales was held at Monmouth on May 15. Lord Kenyon was re-elected Senior Deputy Chancellor, and Dr. Lynn Thomas, C.B., as Junior Deputy Chancellor. A great deal of the time of the Court was unavoidably taken up with elections to the different Committees, and consideration of the reports of the Executive Committee and the Senate. These were mainly of a highly technical character and of little public interest. There was, however, one document submitted to the Court by the Senior Deputy Chancellor which deserves special attention as it contains a most interesting and effective summary of the work of the University during the last five years. The evidence of progress compressed into this comparatively short pamphlet must produce a very deep impression on the public mind, and, incidentally, it will serve as a crushing reply to those critics who have recently been airing their opinions about our national colleges and the University. For the mass of information which this statement contains supplies the

(Continued on page 414.)

From Mr. WILLIAM HEINEMANN'S LIST

FRENCH TRANSLATION AND COMPOSITION.

By **H. J. Chaytor, M.A.**, Head Master of Plymouth College, and **E. Renault, B.A.**, Lecturer in the University of Liverpool. **Crown 8vo. Price 2s.**

This book, which is intended for Upper Forms, presents an original and effective method of teaching the subject. A number of subjects have been chosen, and each subject is represented by two or more passages from classic French writers, followed by an extract from a standard English writer on the same theme. Before attempting the translation of the English passage, the pupil studies the French pieces dealing with the same subject, and this exercise enables him to translate fluently and idiomatically. Free Composition is then set on the same themes.

A COMMON-SENSE ALGEBRA.

By **Asa Burniston, L.C.P. (Hons.)**. **Crown 8vo. Price 1s. 6d. With Answers, 2s.**

This is essentially a book for beginners, and it has one merit which marks it out especially in these days of hurry—it caters for the dull and backward pupil no less than for the more brilliant. The exercises are numerous and well-graded, and there is constant revision of work done.

INTRODUCTORY ELECTRICITY AND MAGNETISM.

By **Carl W. Hansel, B.Sc. (Lond.)**, Science Master, Bedford Grammar School. 373 pages. Over 300 Illustrations and Diagrams. **Crown 8vo. Price 2s. 6d.**

A complete first course in electricity and magnetism based upon actual experiment, and embracing the recent changes and recommendations of the Board of Education's new syllabus. It covers as much of the subject as can be conveniently studied without the aid of the calculus.

ELEMENTARY BUSINESS TRAINING.

By **Victor H. Allemandy**. **Crown 8vo. Price 1s. 6d.**

This book presents in an interesting form a course in the principles of business routine, and aims at giving boys and girls a knowledge of the minor duties expected of them when they enter commercial life. There are numerous exercises, and ten test papers containing actual examination questions.

A FIRST-YEAR COURSE IN GENERAL SCIENCE.

By **G. A. Gardiner, M.A., F.C.S.**, Senior Science Master at Berkhamsted School. **Crown 4to. Price 2s. 6d.**

This is a combined Textbook and Notebook presenting an experimental course of general elementary science. Tables are provided for results and blank pages for notes. There are a large number of exercises, both practical and mathematical.

Teachers making a selection of **ENGLISH TEXTS** will find **HEINEMANN'S FAVOURITE CLASSICS** just what they desire. There are over 30 volumes to choose from, and each contains a scholarly introduction. The **FORMAT** of the books is tasteful and dainty, each has a photogravure frontispiece, and the price is only **6d.** net. Send for prospectus and list of titles.

most convincing proof that the University is admirably fulfilling its functions and that no reconstruction of its Charter is desirable or necessary. Unfortunately, most Welsh institutions seem destined to suffer from a great deal of uninformed and unintelligent criticism. This is, of course, conspicuously unfair, and it is often difficult to understand the motives which prompted it. Is it too much to hope that in future the critics will take the trouble to make themselves acquainted with the most elementary facts about the work of the University? So far, there has been no evidence that they are in the least degree cognizant of the enormous progress it has been making in many directions. We would specially recommend Mr. E. T. John, M.P., for example, to study carefully the paragraphs dealing with the influence of the University on modern Welsh thought, so that he may realize more adequately than he seems to do the extent of the work which has been accomplished in promoting the study of our language, literature, and history. We believe that we should hear less about "alien" professors or the anti-national tendencies of the colleges.

As Principal Roberts stated in his eloquent address before the Court, the progress of the University during the last five years, as outlined in this statement, is so remarkable that every Welshman must experience a feeling of genuine pride in its achievements.

Dealing with what is regarded as the first function of a National University, like the University of Wales—the imparting of knowledge and the encouragement of research—the statement gives some striking statistics. The number of graduates in Arts and Science in the five years 1909-13 were as follows:—889 took the B.A. degree, of whom 529 were in Honours; and 295 the B.Sc. degree, of whom 114 were Honours students. The number of students at the present time in the three colleges is 1,400. The more important question (as affording a truer test of the vigour and vitality of a University) is the encouragement of research and the extent to which it is pursued. The change during the last quinquennial period as compared with the preceding has been most marked in this respect, and has been largely due to the additional grant which the Treasury gave to the University for Fellowships and post-graduate Studentships. Since 1909 twenty graduates have been working as Fellows in different branches of research, and thirty-five graduates within the same period have held post-graduate Fellowships, and we have it on the highest authority that the work in many cases is of astonishing merit. And not only is research actively pursued for the purpose of

the degrees of the University, but in individual colleges original papers of great value have been published. For instance, in Cardiff College seventy-five original papers were published by members of the staff and graduate students in the years 1910-13.

A considerable portion of the report deals with the work of the University in advancing the intellectual interests of Wales, its national language and history. Special sections are also devoted to the work of the different colleges with regard to agriculture, engineering, mining, and law. The success of the Medical School at Cardiff is particularly marked, and it is claimed that no other medical school can show such a distinguished record, for which the credit must be largely ascribed to Prof. D. Hepburn, the Dean of the Medical Faculty. 135 students have obtained medical qualifications at London University and elsewhere. 29 gold medals and distinctions have been won in open competition at the University of London and 36 entrance scholarships into the London Hospitals have been won by Cardiff students.

So far, the work of the University has been carried on with very inadequate means, but it is hoped that as the result of the report of the Advisory Committee larger grants will be forthcoming, so that the University may be able to offer additional incentives to the continuous pursuit of knowledge, and to aim at those particular forms of mental activity which are most in harmony with the genius and interests of Wales.

The half-yearly meeting was held at Chester, under the presidency of Mr. Rhys Morgan, M.A., of Pontypridd. A very interesting report on County Exhibitions was submitted by Mr. A. Lyon, M.A., in which he showed the great disparity which exists between the facilities provided by the different counties in the matter of leaving scholarships. On the one hand, for instance, Glamorgan and Swansea devoted 39 per cent. of a penny rate to this purpose, while at the other end of the scale Carmarthenshire and Denbighshire gave only 6 per cent. An equal disparity also exists between the number of pupils in the schools and the number of exhibitions offered, so that it therefore appears that the chances of a boy or a girl having a University career depends less on his aptitude than on the particular county in which he lives; and the unavoidable conclusion seems to be that leaving such matters to Local Authorities produces a state of things which is absurd, not to say chaotic. The whole question

(Continued on page 416.)

will be granted.**

DUSMO COMPANY, LTD.,

11 QUEEN VICTORIA ST.,
LONDON, E.C.

points to the necessity of the Board of Education exercising a closer controlling authority in connexion with all educational grants.

The draft report of the Sub-Committee of the Carnarvonshire Education Authority was discussed at the County Schools Association, where Mr. J. Rhys Evans, M.A., uttered a vigorous protest against the policy

of dividing the intermediate schools into two grades—one in which higher work is to be permitted and the other in which post-senior courses are to be debarred. He pointed out that the proposal, if adopted, would seriously cripple the already embarrassed finances of the non-selected schools; but the main objection to the policy was from an educational standpoint. To deplete the schools of the more advanced pupils would inevitably result in lowering the efficiency of the schools as a whole and remove from the staff that inspiration to good work which is such a valuable asset in a secondary school. The Association was in complete sympathy with him, and ultimately resolved "that this Association strongly disapproves of the recommendations now before the Carnarvonshire Education Authority that the liberty of some of the county schools to offer post-senior courses should be interfered with." We understand that it is unlikely that the Board of Education will sanction the imposition of any limitations of this character on the work of the schools.

The campaign to raise £15,000 for the National Library of Wales Building Fund has almost achieved its purpose, and the Treasury will shortly be asked to fulfil its promise to provide £1 for every £1 contributed

up to a sum of £50,000. The support which the Library has obtained from the miners and workmen of all grades of South Wales and Monmouthshire proves that the Welshman has not lost his enthusiasm and zeal for educational progress, and the Council of the Library are recognizing this, by evolving a thoroughly democratic conception of the functions of a National Library. The library, for example, is placing boxes of books on industrial history, economics, and sociology at the disposal of all the tutorial classes in Wales.

The Central Welsh Board proposes to hold a special meeting to discuss certain questions of rearrangement of the duties of its chief officers. It has also resolved to apply to the Board of Education for powers to establish a superannuation fund for its officers, to pay the travelling expenses of a standing Consultative Committee to report to the Board and to the Executive Committee on educational ques-

tions referred to them from time to time, and to enlarge the membership of the Executive Committee. The revised scheme of examinations, in which the Higher and Honours Certificate Examination will be combined, will not become operative till the year 1916. There are only minor alterations suggested in the examination schedules for the year 1915.

This sixth annual meeting was held at Llandrindod Wells, on May 7. Mr. T. W. Berry, the Director of Education for the Rhondda district, read an important paper on "The Departmental Committee's Report as affecting Education Finance." The report, which was called into existence with a view of devising a more equitable system of distributing grants from the National Exchequer towards the cost of education, offered no relief under the serious item of repayment of loans, and, though it aimed at giving assistance to the most heavily pressed, it left immense discrepancies from the amount to be raised in local taxation. The scheme left places like Barry, Pontypridd, and Ebbw Vale worse off than at present. The report was discussed at length, and the Federation urged the Government to adopt a much bolder scheme of differentiation in favour of poor Authorities than is recommended in the Kempe Report.

SCOTLAND.

There have been negotiations between the University Court and the Carnegie Dunfermline Trust as to the possibility of an arrangement by which instruction given at the Dunfermline School of Music, combined with a course of lectures at St. Andrews University, might lead to a degree in music. The Carnegie Trustees, however, have announced that they are precluded from considering the proposal, in so far as it involves pecuniary aid in endowing a chair of music, which is beyond the scope of the Trust.

The General Council, at its spring meeting, discussed the proposed regulation for the M.A. degree, that "Scottish history and literature for graduation purposes must be preceded or accompanied by a course in history." An amendment was moved, that the words "or accompanied by" should be deleted; but the regulation was approved by

8 FARRINGTON AVENUE, LONDON, E.C.

Mr. Edward Arnold's List.

HISTORY AND GEOGRAPHY.

A CLASS BOOK OF GEOGRAPHY. By A. W. ANDREWS, M.A. 5s.

Nature.—"Mr. Andrews' textbook is particularly important from three points of view. He has paid special attention to climate, to maps, and to typical physical conditions. From the data which he supplies in reference to climate, the student who works through the exercises provided will have a definite and precise knowledge of the climatic facts of the world arranged in a systematic way. The numerous maps are appropriate and useful."

School World.—"A mine of information. Teachers should see this book."

ARNOLD'S JUNIOR GEOGRAPHY. By W. MACLEAN CAREY, M.A., B.Sc., Second Master of Rutlish Secondary School, Merton, S.W. 1s.

OUTLINES OF PHYSIOGRAPHY. By A. J. HERBERTSON, M.A., Professor of Geography in the University of Oxford. Fully illustrated. New and Cheaper Edition. 2s. 6d.

A PRACTICAL ATLAS OF THE BRITISH ISLES. With Deductive Exercises in Geography. 4to, 6d. net.

A GENERAL HISTORY OF THE WORLD. By OSCAR BROWNING, M.A., formerly Lecturer in History in the University of Cambridge. xx + 700 pages. 5s. net. Also a Library Edition, bound in Roxburgh, 7s. 6d. net.

THE LAST CENTURY IN EUROPE, 1814-1910. By C. E. M. HAWKESWORTH, Assistant Master at Rugby School. 5s. net.

SCENES FROM EUROPEAN HISTORY. By G. BURRELL SMITH, M.A., Assistant Master at the Royal Naval College, Osborne. 2s. 6d.

In this volume an attempt has been made to provide a companion to an English History textbook for the purpose of lending a greater reality to some of the more important actors on the stage of Europe, who in ordinary textbooks must necessarily remain little more than names.

THE ANCIENT WORLD. An Historical Sketch. By C. DU PONTET, M.A., Assistant Master at Harrow School. With Maps. 4s. 6d.

ENGLISH.

SELECTIONS FROM ENGLISH LITERATURE. By ELIZABETH LEE. In Four Books. Carefully graduated and illustrated with reproductions of famous paintings and portraits.

Books I and II. For Junior Forms. Each 256 pages. 1s. 6d. **Books III and IV.** For Senior Forms. Each 320 pages. 2s.

PIERS THE PLOWMAN. Edited by K. M. WARREN. New Edition. 2s. 6d.

ARNOLD'S JUNIOR ENGLISH GRAMMAR. By A. E. ROBERTS, M.A., Joint Author of "The Teaching of English," and A. PRATT, B.A. 1s.

COMPOSITION FROM ENGLISH MODELS. By E. J. KENNY. Book I, 160 pages, price 1s. Book II, 256 pages, price 1s. 6d.

ARNOLD'S SHILLING ENGLISH COMPOSITION. By E. J. KENNY. 1s.

EXERCISES IN COMPOSITION. By E. J. KENNY, Author of "Arnold's Shilling English Composition." In Three Parts. Manila paper covers, 4d. each.

TWO NEW LITERARY READING BOOKS FOR JUNIOR AND MIDDLE FORMS.

Each 256 pp., illustrated. Crown 8vo., cloth, 1s. 6d.

MASTERFOLK. Containing scenes from the Lives of Famous Men, described by great writers.

FAR AFIELD. Containing true stories of Travel, Sport, and Adventure in many lands.

MODERN LANGUAGES.

RENARD LE FRIPON. Edited by MARC CEPPI, Whitgift Grammar School, Croydon. Illustrated, with vocabulary. Crown 8vo., cloth, 1s.

Uniform with "Les Aventures de Maître Renard." A further selection of "Maître Renard" stories, retold in simple French for second-year pupils.

LES AVENTURES DE MAÎTRE RENARD. Edited by MARC CEPPI. 1s.

JUNIOR FRENCH READER. By E. RENAULT, Lecturer at Liverpool University, Author of "Grammaire Française," &c. 1s. 6d.

A FIRST GERMAN PROSE COMPOSITION. By F. W. WILSON, Ph.D., Assistant Master at Clifton College. 1s. 6d.

ARNOLD'S MODERN GERMAN COURSE. By F. W. WILSON, Ph.D. 3s. 6d.

MATHEMATICS.

HIGHER ALGEBRA. By W. P. MILNE, M.A., D.Sc., Mathematical Master at Clifton College. 7s. 6d. net.

A FIRST SCHOOL CALCULUS. By R. WYKE BAYLISS, M.A., Senior Mathematical Master at Whitgift School, Croydon, Author of "A First Formal Geometry." 4s. 6d.

A FIRST FORMAL GEOMETRY. By R. WYKE BAYLISS, MA. 1s. 6d.

A SCHOOL ARITHMETIC. By A. C. JONES, M.A., Ph.D., and P. H. WYKES, M.A., Assistant Masters at Bradford Grammar School. Without answers, 3s. 6d.; with answers, 4s. 6d.

This book is suitable for use in the preparation of pupils for any of the standard examinations.

London: EDWARD ARNOLD, 41 & 43 Maddox Street, Bond Street, W.

a large majority. The regulation is a compromise between the view of the extreme "patriots," who think that Scottish history can be studied without reference to any other history, and the view of those who would make a prior study of general history indispensable. The Council also considered the question of a degree in education and approved the report of a Committee to the effect that it was undesirable to institute an Honours group in Education for the M.A. degree, but that there should be a Doctorate in Education, on similar lines to the Doctorates of Philosophy and of Letters—*i.e.* a post-graduate degree, given as the result of original investigation or research. The University Court has received this report and transmitted it to the Senate for its opinion. Among those who are to receive honorary degrees at the Commemoration on June 23 are the following:—D.D.—Mr. James Rendel Harris, Litt.D., and the Dean of Westminster. LL.D.—Emeritus Professor Archibald Barr; Mr. H. Julius Eggeling, Professor of Sanskrit at the University of Edinburgh since 1875; Colonel Sir William B. Leishman, F.R.S.; Mr. Louis C. Purser, Litt.D., Public Orator and Junior Bursar, Trinity College, Dublin; Sir Ernest Shackleton, C.V.O.; and Mr. D. M. Stevenson, Lord Provost of Glasgow. Mr. Balfour's second course of Gifford Lectures has, at his request, been postponed until 1915-16. Mr. Bonar Law, a former student of the University, has been chosen as Unionist candidate for the Lord Rectorship. A memorial window has been placed in the Bute Hall in memory of Miss Janet A. Gallo-way, LL.D., who was honorary secretary of Queen Margaret College from 1883 to 1909, and who did most valuable work in promoting the University education of women. The window, which is the work of Mr. Douglas Strachan, represents "the pursuit of ideal education." Mrs. Ross has given to the University a portrait of her husband, the late Dr. Ross, who was the first Lecturer in Education at the University. The portrait will be placed in the Education classroom.

The Ordinance instituting in the University a degree of B.Sc. in Forestry has received final approval. The University Court has resolved to institute a lectureship in Public Health, with a salary of £400

Aberdeen.

a year. It is proposed to institute a joint lectureship in Palæography in the Universities of St. Andrews, Glasgow, and Aberdeen, the lecturer to give courses in his subject in each of the Universities at different periods of the year. Edinburgh University has already sufficient provision for teaching the subject. Prof. W. R. Sorley, of Cambridge University, is delivering his first course of Gifford Lectures on "The Idea of Value." The Unionist candidate for the Lord Rectorship is Mr. F. E. Smith, and the Liberal candidate is Mr. Winston Churchill.

Prof. Niecks, who has held the Reid Chair of Music since 1891, has been granted permission to retire at the end of the present academic year. Through his historical concerts and in many other ways he has

Edinburgh.

had a valuable influence on musical education in Edinburgh. Sir Charles H. Read, P.S.A., Keeper of British and Medieval Antiquities in the British Museum, has been appointed Munro Lecturer in Archaeology for 1915. Mr. William Gordon, B.Sc., has been appointed Lecturer in Forest Engineering. The regulations for a diploma in education have been considered and approved by the Senatus and the General Council. They are on similar lines to those of the diploma which has for many years been given at Glasgow University. The regulations for the Entrance Bursary Examination have also been revised. The bursary papers will in future, as in Glasgow and Aberdeen, be dissociated from those of the Preliminary Examination, and the examination will take place before the summer vacation. History and science are now included among the subjects of the examination. Sir Edward Carson is to be the Unionist candidate for the Lord Rectorship. The late Mr. William Dawson, of Gairloch, has bequeathed to the University capital for the foundation of four bursaries in various branches of engineering and in agriculture. The bursaries will each be of the annual value of £30 and will be tenable for three years. The late Rev. George McGuffie has bequeathed £2,000 for the foundation of a bursary. As the lease of the Women Students' Union is about to expire, funds are being raised for the purpose of building a larger and more convenient house.

The annual report of the Education Department on Education in Scotland records continued progress in meeting the new conditions created by the Act of 1908. There has been a further decrease in the numbers on the school registers, coincident with the fall in

the birth-rate and the increase in emigration. Of the total number of children of statutory school age (five to fourteen) 95.69 per cent. were on the registers of the various State-aided and other schools, as compared with 96.23 per cent. in the previous year. The good results of medical inspection have appeared in "the more ready appreciation by School Authorities of shortcomings in the premises

(Continued on page 420)

METHUEN'S NEW BOOKS.

ANCIENT AND MEDIÆVAL ART: A

Short History. By MARGARET H. BULLEY. With 40 Illustrations and a Chart. Crown 8vo. 5s. net.

This book, which is the first of its kind, contains thirteen lessons on ancient, classic, and mediæval art; an introduction which discusses the methods and the necessity of teaching the history of art in schools and homes; and a chart illustrating the great art periods of the world. The first part of each lesson consists of elementary instruction in the form of a story, suitable for children from eight to thirteen years, and the second part of a summary of the art of the same period for use in preparing lessons for older classes. Although the book is intended primarily for schools, it should be found useful by all who want a short account of the growth and development of art.

GEARING: A Practical Treatise.

By A. E. INGHAM, Author of 'Machine Construction and Drawing.' With many Diagrams, Illustrations, Formulae, and Useful Tables. Demy 8vo. 5s. net.

The author has devoted separate chapters to spur, bevel, worm, spiral, and helical gears, and the information given in each section will be invaluable to all who are interested in this important branch of engineering. The Appendix contains useful information, together with a complete set of tables of tangents and co-tangents, sines and co-sines, which are given in minutes, and to five places in decimals.

PRACTICAL APPLIED PHYSICS.

By H. STANLEY, B.Sc., F.I.C., Lecturer in the Merchant Venturers' Technical College, Bristol. Author of 'Practical Science for Engineering Students.' With many Diagrams. Crown 8vo. 3s.

This book is for the use of engineering students and others who are doing laboratory work beyond the elementary stages, particularly in heat, mechanics, and electricity. The earlier section deals with some graphical methods leading up to the calculus and the solution of some differential equations which are employed later.

PRELIMINARY PRACTICAL SCI-

ENCE. By H. STANLEY, B.Sc., F.I.C., Author of 'Applied Physics.' With 120 Diagrams. Crown 8vo. 1s. 6d.

This little handbook is intended for use in the lower forms in trade schools and for technology students in all branches who are entering on a course of science study with a view to a better understanding of their work.

A TEXTBOOK OF ELEMENTARY BUILDING CONSTRUCTION.

By ARTHUR R. SAGE, Chief Lecturer in Building Construction and Mechanics of Building, L.C.C. School of Building, and WILLIAM E. FRETWELL, Chief Lecturer in Plumbers' Work, Sanitary Engineering, and Heating and Ventilating, L.C.C. School of Building. With many Diagrams. Crown 8vo. 3s. 6d. net.

This book is intended for students of Elementary Building Construction as a first year's course, leading up to the Lower Examination of the Board of Education. It should also be useful to students preparing for the various professional examinations, of which building construction and sanitary engineering form part.

A THIRD-YEAR COURSE OF ORGANIC CHEMISTRY.

By T. P. HILDITCH, D.Sc. (Lond.), F.I.C., Author of 'A Concise History of Chemistry.' With many Diagrams. Crown 8vo. 6s.

This book combines a systematic survey of the important class of heterocyclic substances, with a summary of various groups of bodies (notably the alkaloids, purines, polypeptides, carbohydrates, and terpenes) which have formed the subject of the more important research of modern times.

London: HUMPHREY MILFORD, Oxford University Press, Amen Corner, E.C.

under their charge in regard to such ordinary matters as the ventilation, lighting, heating, and cleaning of classrooms, the pattern of the desks," and the sanitary arrangements. Managers are also coming to realize more fully "the culpable folly of neglecting to make any arrangements for the midday meal of children who live too far from school to go home for dinner." As regards medical treatment there is, of course, a great variety of method. The majority of School Boards concentrate their attention on some special class or classes of defects—e.g. of the eyes or teeth. In the larger towns and cities school clinics are established, and many of the lesser School Boards have made arrangements with the local hospital or dispensary. As to continuation classes, only eighteen School Boards have adopted by-laws making attendance compulsory. The report urges a considerable extension of this movement. So far as it has been tried, it has stood the test well in a great variety of districts, from the island of Lewis to the city of Glasgow. At Peebles and Langholm there is an "admirable arrangement" by which the School Boards and the local employers have agreed that the young people should be released from their employment at 4.30 p.m. and thus enabled to have their instruction over by 7. Of the 20,592 teachers of all grades in schools under the Code, 91 per cent. were certificated teachers, and of these 73 per cent. were trained certificated teachers, the remainder having passed the Certificate Examination. The number of uncertificated assistant teachers has dwindled to 646, of whom only 291 will continue to be recognized in service after 1914. In 1913, 1361 new certificated teachers were admitted, and the Department is of opinion that "while the outlook appears to be generally satisfactory, it does not appear that any steps could safely be taken for reducing the present output of teachers."

The report of Dr. Cruickshank, Medical Officer to the Education Department, shows that great progress has been made in the organization of medical inspection in the schools. In all except six counties the medical officer of health for the county either acts as supervising officer and receives the necessary assistance for the work of school medical inspection, or, as in the smaller counties, fulfils the double function of medical officer of health and school medical inspector. The most important evils that have to be dealt with are malnutrition and want of cleanliness. Malnutrition is generally attributed not to deliberate neglect, but to ignorance, and there is general condemnation of the substitution of tea and bread and jam for the porridge and milk

breakfast. "In no district is the standard of cleanliness so high that there is the least cause for self-congratulation. Rather in every district it is such as to engender a deep sense of shame." A gradual improvement is, however, being effected, and the improvement is greatest in those districts where School Boards are most fully alive to their responsibilities.

IRELAND.

Attention was called to the financial prospects of Irish education under the Home Rule Bill in the debate in the House of Commons, on May 20, when Mr. Clancy urged the claims of Ireland to the "equivalent grant," and pointed out that the reason given for withholding it—namely, that no contribution was made towards Irish education from the rates—was misleading, inasmuch as Ireland contributed voluntarily a sum little short of £150,000 to education.

The questions of medical inspection of schools and meals for necessitous school children have not been allowed to drop into oblivion. A public meeting was convened in support of the former project by the Irishwomen's Reform League, in the Mansion House on May 6, when the chair was occupied by Mr. Wm. O'Brien (President of the Dublin Trades Council), and Mr. Shea (Registrar of the Dental Hospital). Dr. Boyd Barrett, Dr. Euphan Maxwell, Dr. Ella Webb, and Father Browne, S.J., spoke on various aspects of the question. The necessity of feeding school children came within the scope of the discussion. It is to be hoped that the Bill now under progress will do something to solve this difficulty. At a recent session of the Children's Street Trading Court, which is held every fortnight to deal with juvenile offences, the presiding magistrate, who had above fifty summonses before him, mostly against children for failing to produce certificates of school attendance, said that he thought it something of a mockery to invite hungry children to sit all day in school in a state of semi-starvation; if the law compelled children to attend school it should also make some provision to secure their being fed.

The Féis Ceoil held its annual competitions in the Ancient Concert Rooms in Dublin during the week May 4-9. The entries this year numbered 585, above the average, in all branches of music—vocal (English and Irish), instrumental, choral, and orchestral. Two competitions were held for the first time: a contest between church

choirs, and another between mixed choirs for the Culwick Memorial Cup, given in memory of the late Dr. James Culwick, to whom Dublin music owes so much. The prize was carried off by a choir in Belfast. The proceedings concluded with a most enjoyable prize-winners' concert on the evening of May 9.

The Margaret Stokes Memorial Lectures were delivered this month at Alexandra College, by Prof. R. A. Stewart Macalister, of the National University, who is doing much to arouse an interest in Irish antiquities. The lectures, held on May 6, 12, and 20, dealt respectively with "Tara, its Site and History," "Cormac mac Airl," and "Maelsechlainn the Great (the predecessor of Brian Boroma)," and attracted large audiences. An expedition to Tara, to be personally conducted by Prof. Macalister, is to form a fitting sequel to the lectures.

The Alexandra College Guild held its annual Conference on May 16, and, as usual, numbers of Old Alexandrians mustered from all parts of the county. The morning session, presided over by Miss White, LL.D., the President, was devoted to business, reports of the various Guild activities, &c., after which papers were read on "Care Committees," by Miss Anita McCarthy, Secretary of the Central Care Committee of the Women's National Health Association; "Ambulance Work and Voluntary Aid," by Dr. J. Lumsden; "Allotment Gardens," by Mr. C. W. Black, of Belfast; and "Women and Social Service," by Miss Anderson, H.M. Principal Lady Inspector of Factories, London. In the afternoon the chair was taken by Lady Talbot de Malahide, and addresses were given on "Family Life on £1 a Week," by Mrs. Pember Reeves, and "Some Modern Novelists as Thinkers," by Mrs. Basil de Selincourt.

THE ASSOCIATED BOARD OF THE ROYAL ACADEMY OF MUSIC AND ROYAL COLLEGE OF MUSIC.—The following awards have been made in the Advanced and Intermediate Grades of the Local Centre Examinations in March-April last, the competition being open to all candidates in the British Isles:—Advanced Grade Gold Medal: Miss Dora Grossé, Chester, Pianoforte, 142 marks. Advanced Grade Silver Medal: Miss Dorothy Chalmers, Aberdeen, Violin, 141 marks. Intermediate Grade Gold Medal: Miss Eileen W. L. Gerwin, Weston-super-Mare, Pianoforte, 142 marks. Intermediate Grade Silver Medal: Miss Ena L. Maley, Douglas (Isle of Man), Singing, 136 marks.

MR. BALFOUR AND THE ENGLISH ASSOCIATION.

IT must be owned that the English Association is ably engineered. Whenever it has a function, names that loom large on the social, political, and literary horizon are associated with it, and much kudos is annually added to its rapidly increasing store. Already Lord Morley, Dr. H. M. Butler, and Mr. Balfour have been its Presidents. To its dinners throng poets, dramatists, *literati*, like Mr. Henry Newbolt, Mr. Granville Barker, Sir Sidney Lee, Sir Sidney Colvin, Mrs. Flora Annie Steele, and a mighty host of professors and educationists of both sexes, far too numerous for anything but an educational directory. And then the columns in the *Times* and other papers; surely the *Morning Post* with its four solid columns romped in an easy first in heaping honours on the Association's head and incidentally on Mr. Balfour's. Bedford Hall, in the new College in Regent's Park, was crowded to listen to an interesting if somewhat academic address. Mr. Balfour contrasted the advantages of poetry over prose as a vehicle of ideas. His recent reading of Prof. Verrall's lecture on Dryden's "The Hind and the Panther" had suggested his subject. It is a political pamphlet, intended to prove the superiority of the Church of Rome over Protestantism; the poet, himself an admirable prose writer, deliberately chose verse, using it, as Mr. Balfour wittily remarked, as a kind of aromatic spice to embalm the mummies of an argument in which we of to-day are little interested. He alluded to the difficulty we experience in defining the pleasure obtainable from poetry; to some extent it is unaccountable, just as is our pleasure in melody. Ornament and decoration are encouraged as poetic enrichment; poetry has as its attribute concentration and intensity, to a degree far greater than prose. Paradox, epigram, and reticence are common to both as aids to effect. Some writers, of whom Richardson may be taken as an example, show very little concentration. Another great stylist, Jane Austen, produced her effects by innumerable minute touches. Mr. Balfour had much that was interesting to say on Browning's "telegraphic" style, in which the reader has often to supply words unexpressed, and, above all, to supply the necessary links of association in order to make the meaning intelligible. When the lecturer alluded to his detestation of examinations, much amusement was caused by the

(Continued on page 424.)

BABY-CLOTHING

ON HEALTHFUL,
ECONOMICAL, and
ORIGINAL LINESA BOOK FOR
MOTHERS, NURSES, TEACHERS,
STUDENTS, AND OLDER SCHOLARSBy
WILENA HITOHING
Organiser of Home Management and
Needlework to the
Derbyshire County Council.WITH INTRODUCTION BY
SIR JAMES CRICHTON-BROWNEIllustrated with 26 Diagrams, 40
Photographs, and numerous Patterns.
136 pages.

The book presents the ordinary modern school course in Plane Geometry. The introductory work on Concepts and Definitions, and the section at the end of Book I on Constructions, use of squared paper, heights and distances, field work, and on parallels in Geography and Astronomy, together make up an experimental and intuitional course, intended either to precede the theoretical course or to accompany it.

The difficulties of the learner are kept in view throughout.

The book suggests two changes:

The first is a new proof of the 3-side congruence, simpler than the ordinary proof.

The second change is that new proofs are given of the fundamental theorems in ratios of lines, angles, and areas.

Entirely New Edition.

536 pages. 3/6

CHAMBERS'S COMMERCIAL GEOGRAPHY OF THE WORLD

By Prof. A. J. HERBERTSON, M.A., Ph.D., F.R.S.E.,
Professor of Geography at Oxford University;

and JAMES COSSAR, M.A.

Separately:

Part I. THE BRITISH ISLES. 152 pp. 1/-

Part II. THE WORLD OUTSIDE THE BRITISH ISLES. 384 pp. 2/6

Part II is divided into Two Sections: I GENERAL and II REGIONAL.

The Educational News says: "The new volume will take its place as the best school and college treatment of a very wide subject. This is a volume that no teacher can afford to be without, since it focusses for him the present-day conditions of commercial development over the globe."

enthusiastic applause of the gallery, filled with Bedford students; their cheering, though feminine, was long and loud. Mr. Balfour spent a crowded, glorious day amongst the Associationists. Tea, a reception, the lecture filled up the program from 5 to 6.50 p.m. At 8 followed the dinner. The American Ambassador, Dr. Walter Page, declared that he had never been taught English, and regarded the omission as a grievance. He airily sketched a post-graduate course for writers, novelists, journalists, in the "art of literary expression," such as they do not have in the States. The students should write for some months about the Commonwealth; then the narrative of their own lives, all this in prose, for, as Mr. Balfour admits, English prose is abominably difficult. For poetry, a sonnet every morning before breakfast, and the compulsory writing of a few plays in order to produce better dramatic critics were recommended.

Mr. Balfour, whose after-dinner speech was not the least useful to some of his hearers, considered that patriotism, whether British or American, might sink under the load of detailed histories. At Eton he himself had never been taught English, neither grammar, nor vocabulary, nor style; never had he received a suggestion as to how prose should be written. He observed that English is undoubtedly the richest of any language spoken and written by civilized man, though this very wealth may not be an aid to perspicuity. He complained that none of his teachers had attempted to implant in him the love of literature, and alluded to the great sacrifice of English to a "classical" education, which frequently ends in the student neither reading the classics with his feet on the hob, as did Macaulay, nor in acquiring that love of the literature of his own language which one might reasonably expect as a result of a fair education. C. S. B.

OBITUARY.

WE regret to record the death of Prof. J. W. Hales in his seventy-eighth year. From Louth Grammar School (Tennyson's school) and the Glasgow High School and University he passed as a Scholar to Christ's College, Cambridge, took a high degree in the Classical Tripos, and was elected to a Fellowship. Shortly after he was appointed by Dr. Bradley

to an Assistant Mastership in Marlborough College, and though he retained the post only for three years he made his mark as a teacher. A master who could take a history lesson without an open book seemed to boys of that generation a prodigy. On coming to London he devoted himself exclusively to the study of English. He was for many years Examiner in English at the University of London, and was appointed Professor of English at King's College, retiring only in 1903. He was one of the first to insist on the importance of English Literature in secondary schools in articles contributed to the *Athenæum* and the monthly magazines, and in his edition of "Longer English Poems" he set an example of how it might be made as serious a study as the classics, and far more profitable for the average boy. He distinguished himself no less by his Shakespearean studies and editions of Early English. As a lecturer in girls' schools he was greatly in request. He was a man of many friends, and 1 Oppidan Road was a favourite house of call for scholars who loved literature. To this journal he was a rare but welcome contributor, and a promised article was left half written at his death.

MUSICAL FESTIVAL FOR GIRLS' HIGH SCHOOLS, MANCHESTER CENTRE.—On Saturday, May 9, choirs consisting of twenty-five girls each met at the Whitworth Hall, Manchester University, to compete for the Singing Trophy presented by Miss Elizabeth Greg. Eleven schools competed—an increase of two on the first year. W. McNaught, Esq., was the adjudicator. The test consisted of a part song chosen by Mr. McNaught, "In Praise of May," by John Ireland, and a unison song, which was chosen by the conductor of the choir singing it—and two sight-reading tests. The singing throughout was pronounced excellent—the tone being specially commended, and it was no easy task to judge between them. Macclesfield High School was again awarded the trophy, with 214 out of a possible 225 marks. Whalley Range High School again came second with 212 marks.

THE TEACHING OF SEX HYGIENE

KENSINGTON HIGH SCHOOL

(G.P.D.S.T.) — MATHEMATICAL MISTRESS wanted for next term. Cambridge Tripos preferred. Experience essential.

WANTED. — PROFESSOR OF ENGLISH LANGUAGE AND LITERATURE.

Applications are invited for the post of PROFESSOR of ENGLISH LANGUAGE and LITERATURE in the CENTRAL COLLEGE, BANGALORE, SOUTHERN INDIA. The candidate selected for the post will be on probation for three years, at the end of which period the Government of His Highness the Maharaja of Mysore will be at liberty to terminate the contract. Candidates should be distinguished University men, who have taken First Class Honours in Classics and made a special study of English Language and Literature, or taken the M.A. Degree with First Class Honours in English Language and Literature in a Scottish or British University. Those who have, in addition, received training in Theory and Practice of Teaching, or have had experience of professorial teaching in a University College, and are between 24 and 30 years of age, will be preferred. The successful candidate is expected to devote the whole of his time in training students for the University Intermediate, Pass, and Honours B.A. Degree Courses. The pay will be Rs.500 a month, rising by annual increments of Rs.50 to Rs.1,000 a month. On confirmation, leave and pension will be according to the Mysore Service Regulations. The Professor selected will be given a free single First Class passage to India, also back to England, if the contract is terminated at the end of the third year of service. Candidates should love educational work among natives of India and be fond of outdoor games. Applications, with copies of testimonials, will be received by the Inspector-General of Education in Mysore, Bangalore, South India, up to the 15th July, 1914. The selected candidate will be expected to join duty as early as possible.

M. SHAMA RAO, Inspector-General of Education in Mysore
Bangalore, South India.
15th April, 1914.

TECHNICAL MISTRESSES.

Domestic Science Mistress for large Public School in Canada, able to teach the usual Domestic Science subjects. Diplomas and experience essential. Res. £80 to £100 and passage.—B 41440.

Cookery Mistress for important Public High School in South Africa, to teach good Cookery, with some other Domestic Science subjects. Good qualifications and experience, and Protestant essential. Res. £100 and passage.—B 39776.

FOREIGN MISTRESSES.

French Mistress for Public Boarding School in North Wales, able to teach Junior Music. Protestant essential. Res. £50 to £60.—F 41376.

Foreign Mistress for Public School in Australia, able to teach French and German. Experience. Res. £100 with passage.—F 41535.

STUDENT-TEACHERS.

Messrs. TRUMAN & KNIGHTLEY always have on their books a large number of Vacancies for **Student-Teachers** on mutual terms or at moderate premiums.

LADY MATRONS AND HOUSE MISTRESSES.

Messrs. TRUMAN & KNIGHTLEY assist qualified **Lady Matrons, Housekeepers, and House Mistresses** to find appointments in Boys' and Girls' Schools.

Ladies desiring further information of any of the above and of other suitable Vacancies should write fully to Messrs. TRUMAN & KNIGHTLEY, stating their age, qualifications, &c., and enclosing copies of their testimonials. **NO CHARGE OF ANY KIND** is made to applicants unless an engagement be secured through this Agency, when the terms are reasonable. Prospectus, terms, &c., will be forwarded on application.

SCHOOL TRANSFERS & PARTNERSHIPS.

A separate Department, under the personal management of one of the Directors, is devoted entirely to the negotiation of School Transfers and Partnerships.

No charge is made to purchasers.

ELEMENTS OF ALGEBRA.

BY

G. ST. L. CARSON, M.A., M.Sc.,

Reader in Mathematics in the University of Liverpool, formerly Head Mathematical Master in Tonbridge School.

AND

DAVID EUGENE SMITH, Ph.D., LL.D.,

Professor of Mathematics in Teachers College, Columbia University.

Now Ready. Part I. 346 pages. Price 3s.

IN placing this book on the market the publishers have every confidence that it will meet with real success. The authors are both specialists, and their aim has been to write a book containing all the work needed in an ordinary school course not leading to any specific examination. They have endeavoured to retain all the features which have conduced to the success of textbooks in the past; at the same time they have incorporated such modern methods as now appear likely to stand the test of experience.

POINTS WORTH NOTICE.

IT IS A MODERN BOOK.

It omits obsolete or unnecessary material. It begins with familiar rules and formulae, making the relation of algebra to arithmetic very clear. It removes unnecessary barriers; for example, the pupil solves easy quadratic equations along with easy equations of the first degree, for the purpose of getting tools for solving the applied examples.

IT IS SYSTEMATIC IN ARRANGEMENT.

The pupil will feel that he is making definite progress from the simple to the more difficult. The book contains numerous exercises, placed just where they are needed.

EVERY PAGE IS A UNIT.

Except where two facing pages form a unit. The pupil never has to turn a leaf in reading a proof or for the purpose of consulting a figure. This relieves eye strain, and allows for greater concentration.

THE REVISION WORK IS STRONG.

There will be found not only an unusual number of exercises throughout the book, but at the end are (1) revision by chapters, (2) revision by subjects, (3) miscellaneous exercises, all arranged in the way that will be most helpful to teachers.

GRAPHS.

Graphs are introduced wherever something is to be gained by so doing, but not otherwise. The chapter on graphs is novel in type, and it is hoped that the treatment will impart some sense of reality.

THE BOOKS ARE WELL MADE.

The eyesight of the pupil has been scientifically considered, large and clear type being used throughout. The paper is of a pleasing tint, has no glare to hurt the eyes, does not tear easily, and is opaque. The binding is strong, yet the books are light in weight and of moderate size.

English Literature.

Its History and Significance for the Life of the English-speaking World. By WILLIAM J. LONG.

582 pages. Fully illustrated. Price 5s. net.

A direct, simple, and interesting account of the great English writers, their works, and the literary periods in which they are included. The sympathetic and scholarly atmosphere pervading the entire work cannot but inspire a love of good literature, and give a better insight into the life and history of our race. The quotations, outlines, summaries, historical introductions, complete indexes, and a good working bibliography will be found of inestimable value to students.

PRACTICAL EXERCISES IN

Physical Geography. WITH ATLAS.

By WILLIAM MORRIS DAVIS.

Text, 148 pages. Price 2s. Atlas, 50 pages. Price 1s. 6d.

The object of this manual is to provide a series of systematic and disciplinary exercises in Physical Geography in order that the student may approach the subject through practical work in the laboratory as well as through lessons in a text.

The Practice of English.

(Being Book II of the English edition of
"THE MOTHER TONGUE.")

Edited by J. W. ADAMSON, Professor of Education in the University of London, and A. A. COCK, Lecturer in Education in King's College, London.

363 pages. Price 2s. 6d.

A sequel to the well-known Book I, English edition, of "The Mother Tongue" prepared for the use of Secondary Schools, and for the senior classes of elementary schools; it is available in one volume or in three separate parts. This revision is based on Books II and III of the original work.

The new volume contains a complete course in composition and such grammar as is necessary for the more advanced practice of the mother tongue. A special feature is the adoption of the principal recommendations of the recent Report on Grammatical Terminology, published through the English Association.

The exercises in composition are also designed to serve as an introduction to literary appreciation and criticism. For the purposes of these exercises the book is well provided with examples of standard prose and poetry.

Complete Catalogue post free on application. Books sent on approval to Teachers.

NEW PUBLICATIONS

Ancient India from the Earliest Times to the First Century A.D. By E. J. RAPSON, M.A. Fcap. 8vo. With six illustrations and two maps. **3s net**

Draws as clearly as possible the outlines of the history of the nations of India, and sketches the salient features of the religious and social systems which flourished during the period. Some notes on the ancient geography and a short bibliography are added.

Harrington and His Oceana. A Study of a 17th Century Utopia and its Influence in America. By H. F. RUSSELL SMITH, M.A. Demy 8vo. **6s 6d net**

Evolution and the Need of Atonement.

By STEWART A. MCDOWALL, M.A. Crown 8vo. Second edition, revised and enlarged. **4s 6d net**

"The Dean of Westminster in a prefatory note speaks of this as 'a remarkable little book,' and unquestionably the writer has dealt with a perennial problem in a manner both striking and original. . . . In spite of its brevity, the book is, in a high degree, suggestive and stimulating."—*Oxford Magazine*.

The Book of Genesis. In the Revised Version. With introduction and notes by the Rt. Rev. H. E. RYLE, D.D. Fcap. 8vo. With 2 maps and 5 plates. Cambridge Bible for Schools and Colleges. [Ready shortly]

John Napier and the Invention of Logarithms. A lecture by E. W. HOBSON, Sc.D. Crown 8vo. With a portrait. **1s 6d net**

Lectures introductory to the Theory of Functions of Two Complex Variables. Delivered to the University of Calcutta during January and February, 1913. By A. R. FORSYTH, Sc.D., F.R.S. Large Royal 8vo. **10s net**

A Handbook of English for Junior and Intermediate Classes. By D. B. NICOLSON, M.A. Crown 8vo. **2s**

Gorsse (de) et Jacquin. La Jeunesse de Cyrano de Bergerac. Edited, with notes and vocabulary, by H. A. JACKSON, M.A. Extra fcap. 8vo. **3s** Pitt Press Series.

Bird Studies in Twenty-four Lessons. By W. P. WESTELL, F.L.S. Large crown 8vo. With numerous illustrations. Cambridge Nature Study Series. [Ready shortly]

PRELIMINARY HISTORY OF ENGLAND

BY

M. K. ELLIOTT,*Honours in the Historical Tripos, Cambridge;*

AND

M. S. ELLIOTT, B.A.

This is a beginner's book, and is issued in response to a very widespread demand among teachers for a book that is thoroughly up to date and that, without being diffuse, gives due consideration to those economic and social factors in history, the importance of which is being recognized in an increasingly large degree. The book is therefore intended for use in classes where the children are aged between 9 and 12 years. It is written in simple language, is well illustrated, and contains a number of useful maps.

The constitutional and political history is treated in such a way as to show clearly the relation of cause and effect throughout, and a feature of the book is the introduction of special chapters summarizing progress during the preceding period, and describing from time to time the social and economic condition of the people.

Ready June 30th. Price 5s.

THE SCHOOL ALGEBRA

BY

A. G. CRACKNELL, M.A., B.Sc., F.C.P.,*Late Scholar of Sidney Sussex College, Cambridge;**Author of "Practical Mathematics";**Joint Author of "Geometry, Theoretical and Practical," &c.*

This book is published in response to a widespread demand among teachers and others interested in Mathematics for an elementary Algebra fully abreast of modern ideals, and embodying the advances made in recent years in the method of teaching the subject.

The book provides a complete school course, including the construction and use of formulae, graphs, progressions, logarithms, variation, gradients of graphs, and the binomial theorem for positive integral indices.

University Tutorial Press, Ltd.,**HIGH STREET, NEW OXFORD STREET, E.O.**

THE ORIENTAL MIND.

AS a consequence of a variety of causes, such as the Delhi Durbar, sedition, and bomb throwing, the poems of Rabindranath Tagore, the South African Indians, things Indian have lately been rather boomed in the West. But the impression produced by the flux of talk about them in the Press is that the apparent interest is balanced by a real ignorance neither lady novelists nor scribbling globe-trotters can dispel. Of course, it is commonly supposed that the Oriental is inscrutable, and it is no doubt true that it would be an endless and thankless task to explore his psychology. But it is possible to exhibit cross-sections of his mind, which, if they are in the last resort inexplicable, at any rate show what it is like instead of resting content with the hackneyed abstract generalizations which masquerade as truth.

The thing can be done by exchanging the abstract method for the concrete, and by contrasting the Oriental with the British mind in certain directions. It is not necessary to make invidious distinctions, or show one to be better than the other. Both have their fine qualities and the defects of their qualities. But it cannot be gainsaid that they are different. Take, for instance, the attitude towards time in the East and West. One of the most remarkable things in India is the signal success with which the Indian sets time at defiance. In England we are accustomed to feel that time flies, and time past is irrevocable—*breve et irreparabile tempus*. We regretfully acknowledge that the flying years glide on, and that time is the great devourer—*Tempus edax rerum*—as the Latin poet reminds us. We are children of the Greeks, and have inherited the belief that what has been done not even the gods can undo. The Indian, however, knows much better than that. He can grow either older or younger at will, and the process is euphemistically known as the "correction" or "rectification" of age. But why, it may well be asked, does he want to do this, and how can he accomplish such an apparent impossibility? An Englishman might like to grow younger, but he seldom wants to grow older all at once. But either way he feels that circumstances are too strong for him. Not so the Indian, especially if he is educated. His early life tends to be overshadowed by examinations. There are the entrances to all sorts of careers, and it is extremely necessary to pass some of them. But with most of them an age-limit is connected, and a boy or young man may happen to be either too old or too young for any particular examination. Now, the Western mind would accept the inevitable, and cease to trouble about that for which age makes a man ineligible. But the Indian is not so easily daunted. If he is too old or too young for an examination which it is profitable for him to pass, why not adjust his age accordingly? We do not say that such ideas would occur either universally or generally. But they are certainly extremely common, and undoubtedly throw a certain light on the psychology of the Oriental mind. There is, then, often a direct motive to alter, or "correct," the age, and as for the impossibility, what could be easier?

After all, the Oriental mind is, as Sir Henry Maine observed, "elaborately inaccurate." Not being a Christian, the Indian has not enjoyed for long a fixed system of chronology; moreover, the Indian and Christian systems exist side by side, and it may not be always easy to fit them together. The fixing of a date—e.g. the date of birth—is therefore more difficult than in the West. Moreover, the registration of births is not so reliable or systematic, for various reasons, as in England. It may be due to these causes that it is quite common for an educated Indian to be unable to state his age precisely. He will say "perhaps" thirty-one, or fifty-three, and so on. Now if it were always a case of inaccuracy, of a perhaps, no doubt a little research might enable the man to be more precise in his statements and to state his age with certainty. But frequently it is necessary not merely to clear up an obscurity, but to demolish a rival theory. It is, for instance, a little awkward, when you want to prove that you are seventeen years old, that your age is entered in an important register as fifteen, on the strength of the deliberate

statement of a parent or guardian at the time of your admission to school. The opposing theory is of a somewhat stubborn character, for *litera scripta manet*. But the Indian is, as we have said, not easily daunted. The "moving finger" which

writes, and having writ,
Not all your piety or wit
Can lure it back to blot out half a line
Nor all your brains wash out a word of it,

has no terrors for him. May it not easily happen that the parent or guardian responsible for the entry had been mistaken or "inaccurate" in his representations? And after all, it is not so very difficult to produce evidence that the boy was born at some other time. In fact, the art of producing evidence is practised with much skill and ingenuity in India. The records of the law courts would furnish ample illustration of this. *Inter alia*, one of the commonest devices is to produce a horoscope showing the required date of nativity, for astrology is still a living thing, and it can be used for a purpose. Further, a horoscope can be bought cheap. It is one of those things that blesses him that gives and him that takes. It puts money into the astrologer's pocket, and supplies the buyer with the evidence he needs. The value of a horoscope seems to depend on its size. It may vary from quarto size to many yards long. The present writer was once confronted with one so long that it seemed worth while to measure it for curiosity. It was no less than 34 yards in length, was probably expensive, and must have been regarded as an absolutely overwhelming piece of evidence. If, then, the evidence can be produced, and there is a *prima facie* case for the rectification of age, the thing can be done, under proper restrictions, for Government takes care to keep it within limits. The restrictions are such that the correction costs money, and it is a fair principle that you should pay for your fun. One day, perhaps, it may be disallowed; meanwhile, presumably in order to make concessions to "inaccuracy" and the chronological difficulties with which the Indian mind has to contend, the practice is winked at by a benevolent and sympathetic Government. It is an expedient adapted to compass a certain end; it is known for what it is; an Indian once described it as "foul practice" to which he might be compelled by circumstances to resort. So there are no illusions about it. The point is that the practice is a symptom of the psychological climate of the country in which the educated Indian grows up. These things are set down not for praise or blame, but just to state the facts. For good or evil, it is a thing that does not happen in England, and may fairly be taken as a differential characteristic of the Oriental mind.

Inaccuracy, however, may assume other forms. One example has been given of the indifference, not to say the superiority, to time. Another form is unpunctuality. Here, again, the Indian is at a disadvantage compared with the modern European. The vast mass of the population reckons time by the sun, and watches are few, though cheap Swiss watches are becoming popular with the more educated classes. The Indian is not surrounded by clocks, nor is the hour always striking. In cantonments a gun is fired at midday, and that assists reckoning by the sun. But whatever the cause, punctuality is not a characteristically Indian virtue. Even if there is a clock in possession, it does not very much matter if it goes wrong or stops altogether. The deficiencies of the clock might serve admirably as an excuse for lateness. Only recently the writer found a large institution a quarter of an hour behind railway time because the clock was slow. Presumably, therefore, special arrangements and calculations would be necessary to ensure the catching of a train. Unpunctuality is one of the most besetting sins in schools and offices, and it is an offence that the public consider most venial. Parents, for instance, do not mind it in their children, and are always willing to condone it. Schoolmasters are not guiltless of it, and therefore regard it lightly in their scholars. They easily lapse into it, unless they are kept severely up to the mark, and they would not feel much shame

about it before their class. What they object to is to be found out. But for the sanction of this eleventh commandment, it is to be feared that unpunctuality would be extremely widespread. In fact, the native seems ready to endorse Wilde's epigram that "punctuality is the thief of time," and in his heart prefers procrastination and to fall into arrears. These things may be considered venial, perhaps trivial, offences. It all depends on your point of view. In the modern European's mind they are not trivial, for he believes that time is money, and that punctuality is necessary to the prompt and efficient despatch of business. On this matter East and West never seem to meet. It may be that it is a case of an inherent antithesis between the active and the contemplative types of mind. "Only Englishmen and dogs," according to a character in Kipling, "walk to and fro in the sun without reason," whereas the Indian frequently corresponds to the description "*sedet aeternumque sedebit*." As an Indian once remarked, the Indian conception of spending a holiday was "to make oneself merry by sitting idle." Who shall decide between the comparative merits of feverish energy and loafing on a holiday? NIHIL.

(To be continued.)

PLAY ACTING AND PLAY READING.

By FANNY JOHNSON.

EVERY art has its own pitfalls. That of the drama, being highly complex, is perhaps the most dangerous of all occupations, and the more fascinating to its votaries on that very account. That general and public interest is nowadays felt in things dramatic cannot be doubted. One can hardly open a newspaper or periodical of any kind without coming across some reference to the stage, from the extremely partial account of the local bigwigs in their latest amateur performance, as reported in the provincial press, to solid articles in the serious monthlies, which treat of dramatic art apart from social or commercial considerations. Between these lies a gulf; but the genuine amateur, or lover, must rejoice at any and every attention paid to his favourite art. He finds it a healthy sign. For instance, that playwright, actor, and public have a habit of mutual recrimination. The actor-manager, who is abused by the author for rendering his highest aspirations fruitless, in his turn vituperates the audience which incessantly demands the worst instead of the best that he is willing to offer. And then, again, the public is bewildered by a variety of counsel. Are they to follow, for example, the precepts of Mr. Gordon Craig, or of Mr. William Poel, in reference to stage scenery? Is the fluency of Mr. Bernard Shaw, or the reticence of Shakespeare in the matter of stage directions the more praiseworthy? Is the stage a proper medium for discussion? Shall plot or character "carry it" in the construction of a play? And so on, through all the various departments of the whole complex! And now comes Mr. Spingarn, in Vol. IV of the Collected Essays of the English Association (Clarendon Press, 5s. net), with "A Note on Dramatic Criticism" which, on the face of it, virtually denies that *theatre* and *drama* have any essential and indispensable connexion. This essay, the most important in a volume which contains three out of seven articles on things dramatic, will no doubt lead to discussion, since it reopens the whole question of "What is drama?" and shows how widely divergent have been the answers given from epoch to epoch.

Almost every page contains some incitement to controversy. We can all agree with the writer's main contention, that "a play is a work of creative imagination, and must be considered as such always, and as such only." But this, after all, does not carry us very far. The question rather seems to be whether we can conceive of drama as actually existing apart from the interpretative arts of music, dance, and acting, whether, in fact, theatre and drama *are* quasi-synonymous terms, as modern habit has almost suc-

ceeded in making them. It must, indeed, surely be admitted that the study of drama may be carried on apart from the practice of the theatre. Mr. Spingarn protests against the material and pedantic attitude of those who hold it needful for young playwrights and other learners to study the conventions of the theatre, the art of appealing to a mixed and motley audience, as though there were an *arcane théâtral*, to which neophytes were admitted by some hocus-pocus of initiation. This is sound and much needed advice. A dramatist born can learn his trade without ever having been inside a theatre, or knowing the difference between an apron stage and a handcart. This theatrical bric-à-brac, as Mr. Spingarn calls it, no more aids the production or the criticism of art than the collection of any other antiquarian ware makes the collector an artist. And yet the born dramatist instinctively loves the theatre, though he clearly perceives that all the world's a stage. On all sides we are struggling nowadays to return to some primitive *naïveté*, some freshness of outlook, apart from the canons with which each generation before us has obscured the arts. Not long ago Shakespearean criticism was extensively written by scholars who overlooked the fact that Shakespeare wrote for an audience and inevitably had a theatre in his mind's eye. Now the pendulum has swung in the opposite direction, and elaborate discussions about scenery and technique, about lighting and costume, and the rest of the theatrical chatter become shibboleths, like the chatter about "direct" methods of learning language. It is not the theatre *per se*, but the assumptions and arrogations of those who live on or upon it, against which Mr. Spingarn protests.

The educationist has to consider in this regard what is the proper guidance for students of the dramatic art. And here we may again join hands with Mr. Spingarn, and urge the necessity of reading as well as of acting plays. It is just as disastrous to be absorbed in consideration of costumes, attitudes, gestures, scenery and stage-effects, to the neglect of the play itself, as it was to regard the classical drama as a vehicle for philological instruction, and to be dimly aware that the greatest English dramatist was an important name in "Literature." Young students are obviously more inclined to plunge into the Charybdis of stage-convention than to strike against the rocky philological Scylla. I would point out a more excellent way, namely the habit of play-reading, as a musician reads a score, supplying mentally the interpretation for which the stage is the proper medium. The acting of plays is, after all, a natural result of the writing of them, but for some reason or another the *reading* of plays for pleasure has been eschewed by the English as compared with the presumably not more intelligent French or Germans. Indeed, until recently it was no easy matter to form the play-reading habit, for few plays had been published at prices accessible to the multitude.

Given popular prices, millions might read, as against thousands who could afford to *see*, a play, and thus a direct link be made between author and reader, to counterbalance the intimate tie that exists between spectator and actor. For reading is finally the chief corrective of the pernicious tendency to put the disciple, Irving, above his master, Shakespeare. Drama being, among other things, a branch of literature, all its greatest examples are contained in written books. Talk as we may about technique, it remains that a play is a story told in dialogue; that the best plays are *interesting* stories, and, moreover, that all plays are (comparatively) *short* stories, and hence one would think easier to read than long novels or epics. No doubt some persons are deterred by the look of a printed page in which only the speaker's name, perhaps in an abbreviated form, occurs, instead of the familiar "says he" or "says she" of their own spoken dialogue. For such falterers on the threshold the reading of plays *aloud* and the reading *in parts* is the only way.

And here another difficulty meets us, and a gap in our teaching system is apparent. For only those who have ever got up Play Readings can be aware how far short even the "educated" are from a respectable standard of reading aloud. The play-reading habit thus has the further incidental advantage of proving, and perchance improving,

the speaking voice. The glibness of tongue that makes a good reader is equivalent to the suppleness of finger acquired from constant practice by the musician, and hardly anyone *practises* reading aloud. There is no short cut to the accomplishment, and it can scarcely be taught in schools, where class work conceals individual defects. We have to look across the ocean, to such institutions as the School of Literature and Expression at Toronto, for hints, which it is odds but our parsimony will not allow us to put in practice. Failing any means to nourish the social Play Reading, much might, however, be done by public libraries and other local authorities in education by calling attention to the dramatic material which lies ready to hand in cheap and attractive form for individual readers. Scarcely a publisher of repute but has some few plays, frequently under the quaint heading of "Poetry and Drama," on his list. And several of the newer publishers are beginning to cater definitely for students of drama in a generous and inclusive sense, providing both popular prices and a considerable range of examples. An inquiry suggests a demand, and demand is apt to breed supply. One word in conclusion. The habit of play-reading, whether in the solitary study or in the social drawing-room, is, like dram-drinking, not easily relinquished. For the progress of the art it is as fruitful as play-acting.

HOLIDAY RESORTS.

"THE willingness of teachers to sacrifice a substantial portion of their holidays to the desire for improving their qualifications is an encouraging feature." We quote from the preface to "Summer Schools for Wales, 1914," by the Secretary of the Welsh Department, and, as our "Jottings" and advertisements testify, this new longing to go on pilgrimage is not peculiar to Wales. It is, we believe, a healthy movement and one to be encouraged. Mr. Davies commends it as an opportunity for intensive study in an academic atmosphere, but, as Chaucer's pilgrims were not all or wholly prompted by religious motives, so it is not simply professional zeal that induces teachers to frequent a holiday resort. If it were so, we should indeed be inclined to echo Talleyrand's warning against *trop de zèle*. For the fagged teacher at the end of term what could be a worse recipe than lectures in a stuffy classroom and a repetition of lessons, with the only difference that he is now the taught? Is it not better done, as others use, to make ducks and drakes on the seashore, or take a Cook's ticket somewhere out of the range of books and shop? Will he not say with Cicero, the most strenuous and indefatigable of mortals, "*hoc ipsum delectat nihil agere*"?

This is one aspect of the question, and the only one that presents itself to the conservative teacher of the old school. The objection is so far valid as it shows that Holiday Courses are not a universal nostrum. But other considerations will recommend them to the majority of young teachers. First, the place chosen is either some city worth visiting for its own sake or in the midst of beautiful scenery, and arrangements are always made for play no less than for work. Secondly, the provision of comfortable quarters at reasonable rates, without the bother of hunting for lodgings, is an attraction for most teachers, especially women. Thirdly, loafing is an enviable gift that few teachers possess, though they like to read about it in Hazlitt and R. L. Stevenson, and solitude is the last thing that they would relish. What they want and what they seek is change of scene, change of company, change even of work. A couple of lectures and an hour's attempt to acquire the true Parisian accent adds a zest to the afternoon's picnic and the concert or dance in the evening. If they are wise, they will, of course, consort with foreign students or their foreign hosts, or, if it is a Home Course, they will pick the brains of their *confrères* and not be afraid of talking shop. It is generally false modesty, not snobbishness, that makes schoolmasters in the holidays conceal their profession and avoid any reference to school. Pedagogics has a bad name

as the dismal science, and they are afraid of boring their neighbours. But this is a mistake, and the shop of the classroom or college must be more interesting to the outsider than the shop of the golf or race-course. Holiday Courses have come to stay, and anything is better than the rule of Cowper's masters, who

Dismissed their cares when they dismissed their flock,
Machines themselves and governed by the clock.

JOTTINGS.

WE have once or twice criticized *Everyman's* "French page" as unworthy of the gifted editor. It is a pleasure to report in a recent number (May 8) a faultless version, signed "E. Spencer Beesly." The passage, indeed, is so straightforward that it might well have been set for Junior Locals, but it would be hard to pick a page of French prose so simple that it would not exercise the translator and bring out qualities of style. We would suggest to Dr. Sarolea that, by way of a change, he should select a passage worthy of his steel, and give us, for example, a model version of "La Mort de Cromwell," set in the last examination for the Higher Certificate of the Scotch Board of Education.

AT the Easter Conference of the N.U.T. it was announced that Mr. C. W. Crook (Tottenham and Wood Green) had been elected Vice-President by a majority of eight thousand votes over the next candidate. For the place of conference for 1915 Blackpool was chosen by a narrow majority of votes over Margate.

THE School Journey Association send us their "Record" for 1913. This is the second year of publication, and gives in tabular form particulars of seventy-five journeys made during the past year. For heads of schools and managers it should prove an invaluable guide, pointing out, as it does, desirable localities, the accommodation that may be looked for, and the probable cost. But this, though of most practical use, is the less interesting part of the "Record." There are, besides, reports from the masters or leaders of typical excursions, on the Continent as well as in England, and accounts of summer and open-air schools to which children are sent in batches. The Board of Education has bestowed on the Association its blessing, but has so far refused to make any extra grant for school journeys. Till such time the Association must rely for funds solely on its members. The annual subscription is only 2s.—the price to non-members of the "Record"—and we trust that many of our readers will send in their names to the Hon. Treasurer, F. E. Rogers, Esq., 78 South Side, Clapham Common, S.W.

THE National Organization of Girls' Clubs will hold their Exhibition of Trade and Club work to be opened by H.R.H. The Duchess of Albany on Wednesday, the 10th, at 3 p.m. in Duke Street Hall, Duke Street, W. At 4 p.m. a Conference on Secondary Education, presided over by the President, Mrs. Creighton, will be held, and Mr. C. P. Trevelyan, M.P., is announced among the speakers.

MR. F. J. GOULD has returned from the United States after a teaching and lecturing tour of seven months organized by Prof. F. C. Sharp of Wisconsin University in co-operation with the Moral Education League. His missionary tour has been most successful, and a "Manual of Moral Instruction" especially compiled for American elementary schools is being widely adopted.

THE Teachers' Guild has issued the Program of the English Holiday Course for Foreigners to be held at the Letchworth Garden City, August 1 to 22. There will be seven courses, on Literature, Language and Phonetics, Law, History, Philosophy, and Architecture for which the services of distinguished Professors have been secured, besides supplementary courses, the subjects to be determined later in accordance with the wishes of the students. It is calculated that £7 will cover the cost for the three weeks including board and lodging. Foreigners should apply to Miss B. Foxley, 3 Norton Way, Letchworth, enclosing an international coupon.

THE Board of Education propose to appoint shortly some Assistant Inspectors (men) for service in the Elementary Schools Branch of the Board. There will be about seven vacancies. For these

particular vacancies applications will be confined to candidates who are over thirty years of age and not over fifty years of age on September 1, 1914, and who have had not less than eight years' experience as teachers in elementary schools. *Ceteris paribus*, preference will be given to candidates who have had experience as head teachers.

FRIENDS and admirers of Dr. Frazer have taken the completion of the Third Edition in twelve volumes as a fitting occasion of doing honour to the author of "The Golden Bough." A strong committee has been formed for the purpose of establishing a Frazer Fund for Social Anthropology. The Fund will be held in trust by the University of Cambridge, and from it grants will be made to travelling students of either sex who propose to investigate problems in the culture and social organization of primitive peoples. Names of those wishing to join the Committee should be sent to the Hon. Secretary and Treasurer, Mr. F. M. Cornford, Trinity College, Cambridge, who will also receive contributions.

THE Association of Teachers in Technical Institutions will hold its eighth Annual Meeting at Liverpool during Whitsuntide. On June 1 Mr. P. Abbott will deliver his Presidential Address. Papers will be read by Mr. W. Hewitt, Director of Technical Education for Liverpool, Prof. Haldane Gee, and others. There will be visits to Port Sunlight and Messrs. Cammell Laird & Co.'s Works, and a reception by the Lord Mayor at the Town Hall.

WHAT promises to be a most instructive Conference on the Next Steps in Education will be held in the University of London on June 18, 19, and 20, under the auspices of nine somewhat heterogeneous bodies, which include the Theosophical Society and the N.U.T. The subjects and speakers announced show, however, that the physical and psychological sides of education will predominate—Dr. J. Kerr on Ventilation of Schools, Dr. L. D. Cruickshank on the School Clinic, Mr. Cyril Burt on Mental Types, and Prof. Muirhead on Civics. It is to be hoped that the Committee will limit the Conference to these aspects and not allow it to expatiate at large over the whole field of education.

AMONG Holiday Courses we have received from the Institut Français en Espagne the announcement of one to be held at Burgos from August 7 to September 15, under the direction of the University of Toulouse. Lectures will be given in French and Spanish, and the fee for foreigners is 50 pesetas (about £2). For further information apply to Prof. E. Mérimée, 54 Rue des Chalets, Toulouse.

THE West Riding of Yorkshire County Council announce a Vacation Course of two or three weeks beginning on August 4 at the Training College, Bingley. Students will be housed and boarded at the College, and have the free run of the common rooms, library, and grounds. The object of the twelve courses named (Prof. J. Adams acts as *doyen*) is "to stimulate teachers and give them opportunities of observing new methods rather than to impart specific instruction in the subjects themselves." The total fee is four guineas for the three weeks and three guineas for the fortnight. We need hardly point out that Bingley College is an ideal for combining the *utile* with the *dulci*.

THERE are at present in Scotland 195 higher grade schools, and of these all but nine are open to both sexes. The Women's Educational Union have some reason to complain that in all these mixed schools without exception the Head is a man, as is generally the second in command. The demand that the special charge of the girls should be entrusted to a woman is a very modest demand. We hold that a woman is just as capable of ruling men as a man is of ruling women teachers.

THE work of the Central Bureau and of the Students' Careers Association has expanded so much of late that a special Committee has been formed, with Viscountess Bryce as its President, with the purpose of collecting, tabulating, and disseminating intelligence as to careers and employment open to highly educated women. From the last Report we learn that in 1913 there were placed on the Front Employment List 1,210 employers and 1,360 well equipped workers. Of applicants 574 were placed directly by the Bureau and 418 indirectly through introductions or information supplied. Since the work of training was started in 1907, 158 students have passed through the hands of the Central Bureau. The address of the Institution is 5 Prince's Street, Cavendish Square, W.

Up to April 16, 2,311 applications for registration had been

received and have been classified by the Secretary under the four groups: University, 74; Elementary, 321; Secondary, 1,411; Specialist, 505. The N.U.T. now numbers 88,376 members, and, if we assume that there are five elementary for every secondary teacher (a calculation well within the mark), the same proportion of registrees would be 1,926, but the small number is partly accounted for by the fact that the Executive of the N.U.T. did not move in the matter till after the Ipswich Conference. Since then a circular has been sent out from Russell Square advising members to register. The Council has resolved that experience in foreign schools, under conditions approved by the Council, be accepted for purposes of registration. Sir L. A. Selby Bigge has sent in his name for registration. We should be curious to know under which group he will appear in the Register.

THE Head Mistresses' Association will hold their Annual Conference on June 12 and 13, at the Redland High School, Clifton. The President for the year (Miss Robertson, Christ's Hospital, Hertford) will preside.

THE Association of Assistant Mistresses in Public Secondary Schools will hold an Extraordinary General Meeting on June 6, at 2 p.m., at the Wyggeston Grammar School for Girls, Leicester. Miss C. L. Laurie will propose a resolution welcoming the Report of the Departmental Committee on Superannuation, and Mr. P. J. Hartog will read a paper on "Imitation, Sincerity, and Imagination in English Composition."

THE report of the Principal on the work of the University of London, 1913-14, announces a maintenance of its manifold activities and an extension in many directions. Six new University Chairs have been established, among them Professorships of English Literature held by Sir Sidney Lee at the East London College and by Miss C. F. E. Spurgeon at Bedford College. From Christmas next King's College in the Strand will take over the Arts and Science Department of King's College for Women, and the Home Science Department will be transferred to the Queen Mary Hostel as soon as the buildings are ready. The growing success of the younger Universities accounts for a considerable fall in the number of Matriculation candidates. Internal candidates for degrees have increased and External have fallen off. No action has been taken to give effect to the scheme of the Royal Commission Report, and on the question of a new site Sir Henry Miers judiciously states that he has nothing to report beyond what has appeared in the public press.

THE Southwark and Lambeth Free Loan Picture Exhibition will hold its twenty-fourth Exhibition at the Borough Polytechnic from June 6 to 28. Among the loans of this year are pictures by Sir Alfred East, Arthur Lemon Heilbutt, Heilbutt and Leech (original *Punch* drawings), and among living painters Sir James Linton, D. Y. Cameron, and Briton Rivière are well represented. The visitors last year amounted to more than ten thousand. The cost, including concerts, averages £410, and the promoters appeal for help to continue the good work. Subscriptions may be sent to the Bankers, Messrs. Cox, 16 Charing Cross, S.W.

WE stated last month that the Departmental Committee on Local Taxation had recommended that for the "whisky money" should be substituted a grant of the same amount. We should have added that the grant was "fixed" some six years ago at £807,260. What is now proposed is that a grant of approximately equal amount should be distributed on an entirely new basis "in proportion to the net expenditure incurred by the different Local Authorities concerned"—whether on higher education or all education is not clear. At present the grant is distributed in proportion to receipts from the discontinued grants-in-aid in 1887-8. On this point the Report is somewhat slipshod, and no examples are given of the effect of this new scheme of allocation.

THE second meeting of delegates to consider the formation of an Education Society, held at the Teachers' Guild on May 23, agreed to the appointment of a Provisional Committee, the selection of names to be left to the Chairman, Canon Masterman, and there was a general consensus that the new Society must, at least to start with, be a branch of the Guild. Further, it was manifest that a "Clearing House" best expressed the conception of the originators—a Society not only for learned research, but also for conference between experts and administrators and for disseminating the results of their united wisdom. A circular addressed to a limited number of prominent educationists has already secured fifty promises of support, and when, with the new year, the Teachers' Guild is

established in larger and more commodious premises, we have little doubt that it will carry through its scheme of an Education Society, as it has the scheme of a Conference Week.

MRS. BRYANT will preside over a Conference on "The Teaching of the Gospel Story in relation to the Spiritual Development of the Child," to be held at the London Day Training College on Wednesday, the 10th, at 6 p.m.

THE REV. WILLIAM TEMPLE, Head Master of Repton, has accepted the living of St. James's, Piccadilly. It will be remembered that last year Mr. Temple was offered and accepted the Crown living of St. Margaret's, Westminster, but it was discovered that he did not satisfy the statutory condition of having been for five years in Priest's Orders.

CORRESPONDENCE.

HENRY RICHARDSON.

To the Editor of The Journal of Education.

SIR,—In the excellent obituary notice of the late Mr. Henry Richardson, of Marlborough, which appeared in the *Times* of May 15, it was stated that Richardson was "not a remarkably good teacher of a class." If not specially distinguished in this respect, he certainly possessed many sound qualifications for the task, some of them perhaps more important, particularly in dealing with young boys, than exceptional cleverness or subtlety of mind. He was one of those men to whom it comes naturally and easily to be a good disciplinarian. In the management of his class he was able, I believe, to dispense altogether with the somewhat unsatisfactory form of punishment known as "setting lines." He was more completely in his element as a house-master, and did valuable work throughout the many years during which he presided over the Lower School and Littlefield House successively. Without making any pretensions to high intellectual power or originality, he was a decidedly well informed man, reading widely, and exercising a shrewd and independent judgment on what he read. In 1906 he printed for private circulation, under the title of "Winged Words," a charming little volume, of which he used to give copies to his boys and others, containing a selection of passages in prose and verse which he had found suggestive and helpful. His name will be kept in remembrance at Marlborough by a collection of books which was presented to the School, on his retirement, by old members of his house as a token of their affection and esteem for him. The books—most of them illustrated—were chosen by Richardson himself with much care and skill, and form a model school library on a small scale. His personality was in many ways a striking one. No one could have been more unlike the conventional pedagogue. His distinctive gifts and qualities—amongst which must be reckoned a frank and cordial manner and a genuinely sympathetic disposition—were such as impress and win boys, while the character of a man so high-minded and so entirely devoted to duty could not fail to command respect. Marlborough owes much to him.—I am, Sir, your obedient servant,

OLD MARLBURIAN.

May 16, 1914.

[A colleague, to whom this letter was shown by the Editor, writes: "I thank you for allowing me to add my testimony to that of 'Old Marlburian.' I can countersign every word of his letter, the only fault of which is that the half is not told. Henry Richardson was the *beau idéal* of a public-school boy. I say 'boy,' for a boy at heart he remained to the very end, and to this quality he mainly owed his influence and power as a master. As a boy he rode to hounds, and up to the serious illness in 1905 that led to his retirement he rode as straight as when he was a boy. His most treasured possession was a silver goblet inscribed, 'Presented to H. R. by the members of Dr. Butler's House, in acknowledgment

of the signal services rendered by him during the time he was Head of the house.' Though no athlete himself, he took the keenest interest in all games, and it was he who introduced hockey in the Lent term for juniors—now an institution throughout the School. But with him sport and games were relegated to their proper place, and, though ready enough to talk cricket or football shop, he would adroitly turn the conversation to books and politics, Kipling's last poem, or the Home Rule Bill. He was a keen judge of character, and had a wonderful knack of getting hold of boys. He had a fine sense of humour and indulged it freely, but his chaff was always good-natured and never left a sting. Every boy in his house felt he had in Richardson a friend, and their friendship outlasted school. Among old pupils he numbered regular correspondents by the score. Though enfeebled by the illness of 1905, after resigning his mastership, he threw himself heart and soul into municipal work, and as a member of the Town Council, a governor of the Grammar School, as Chairman of the Marlborough Liberal Association, and as J.P., he showed that he could win his way and hold his own with men no less than with boys. But this is not the note on which to end. I would rather recall him in his garden at Sigglesthorpe watching his bees like Virgil's old man of Tarentum, or pointing out the beauties of his rockery to some old Marlborough visitor. He rarely passed a Sunday without one or more."]

COLONIAL AND FOREIGN NOTES.

UNITED STATES.

On January 1, 1914, California had had, as the *School Review* (XXII, 4) reports, a year's experience of its Free-textbooks Law. In this time the State had produced and distributed 1,500,000 books, costing it 316,000 dollars, an average for each pupil of less than 80 cents. Had the books been bought at publishers' prices, the cost would have been 500,000 dollars more. The experiment in California is being watched very closely by several other States. Nebraska, Wyoming, Colorado, Minnesota, Pennsylvania, and others already have free textbooks. Kentucky passed a law for uniform texts on February 4, and the step from uniformity to State-publishing is but a short one. Kansas seems to be following the example of California; and Iowa, Georgia, Kentucky, Minnesota, and Washington are discussing the question. When the State publishes the textbooks, not only is economy effected, but needless changes, due to the wiles of competing book agents, are avoided. And the State can best satisfy its own desires. The Kansas Commission, asserting that the illustrations of farm life in most texts are mere caricatures, has hired an artist to draw sixty pictures of real farm life for its new primers. As to England, our textbooks are incomparably good, and competition among publishers has served education well; yet we have known, in an agricultural district, the ill-drawn cow of a schoolbook to discredit all the learning of a school.

It is not, however, State-publishing, but Vocationalism, that occupies most largely the thoughts of pedagogues in the United States. Let us be clear in our terms. Vocational education—less fitly called "cultural" education—is distinguished from liberal education thus: liberal education aims at the producing of a man; vocational at the producing of a tradesman (in the non-invidious sense), or wage-earning man. To vocationalize a school is to recast its scheme of instruction in such a way that it may fit its pupils for some definite work in society, viewed as an economic machine, instead of leaving society to find for what work they are fit. To vocationalize a subject is to teach it so that a knowledge of it may become marketable for a specific purpose; to vocationalize Greek, for example, in the interest of the young Levite would be to concentrate study not on Attic, but on Hellenistic

Greek, and to substitute the Septuagint and the New Testament for Sophocles and Thucydides. Now clearly there is no *opposition* between the making of a man and the making of a wage-earning man: nor in vocationalizing a subject do we necessarily deprive it of its value for the purposes of liberal education. Would it not be possible in making, for example, the perfect carpenter to make the perfect man? The problem that pedagogues are studying is to devise a form of education that shall be at once liberal and vocational. Dr. Charles W. Eliot, formerly President of Harvard University, and retaining at eighty years of age his old alertness, looks to science as likely to yield an education having a notable cultural effect as well as its admitted practical worth. He writes (with slipped ease), in a letter addressed to President Joseph Swain, of the National Education Association:—"For me the most interesting educational topic of the present time is how to get an education of high cultural value out of the teaching of exact science and the inductive method, and the imperatively needed training to skills of all sorts—eye, hand, ear, and nervous system generally. . . . It is clear that what is called concrete and practical training is capable of imparting a high degree of culture, a strong power of application, and a disciplined memory: but our school systems have not yet learned to do it." We commend the subject to the notice of our readers. To reconcile liberal and vocational education would be to win a proud place in the Temple of Fame. At present it is the teacher alone whose education is at once to wages and to life.

The future, as we hope, will see the teacher, and especially the primary teacher, in much closer intimacy with the industrial conditions of the community. He must have knowledge of its vocations if he is to give his pupils, its children, vocational guidance.

The Economic Difficulty: Influence of Demand.

But as soon as the school begins to turn out tradesmen, a danger arises. The Education Authorities, from heedlessness or acting in bad faith, may provide recruits in undue proportion for some particular trade, and so lower in it the price of labour. Again, it is important, in training for a vocation, to consider demand and to distinguish between the "constant occupations" and the "variable occupations." The Russell Sage Foundation has been investigating this subject and the results of the inquiry are collected by Dr. Leonard P. Ayres in *Home and School Education* (XXXIII, 8): "The constant occupations," he says, "are, in the main, those which are necessary to maintain the many branches of that enlarged municipal housekeeping which must go on wherever large numbers of people live together in one place. For example, house painting must be carried on in the city where the house is, while paint may be manufactured anywhere. Thus house painting is a constant occupation, but the manufacture of paint is a variable one. . . . Similarly the occupations of the butcher and the baker are constant occupations because they are everywhere represented by considerable numbers of people; while the work of the candlestick-maker is a variable occupation." There are in the United States twenty occupations for men (e.g. those of the labourer, clerk, shopman, barber, and shoemaker) engaged in which will be found at least one worker for every thousand in the population; for women there are seven of these occupations (those of the domestic servant, dressmaker, teacher, saleswoman, laundress, nurse, and housekeeper). Such occupations are "constant," as distinct from "variable" occupations, in which a smaller percentage is employed. It is not contended that vocational instruction is to be governed tyrannically by this difference, and that the trades most followed are to be taught exclusively. But demand will always affect organization, and general as well as local demand must be taken into account. Goldsmith, it is related, made a pedestrian tour through Europe, paying his expenses with tunes on a German flute; to-day it is the German barber who travels farthest and most cheaply—his services being everywhere acceptable. And in discussing with our boys the choice of a vocation, we must put before them the prospects of employment; they cannot all become buccaneers and monarchs of island realms, wide as the region of fairy is.

We are come thus to vocational guidance, as to the propriety of which, whatever may be thought of vocational education, there will be no diversity of opinion. Here the Americans of the United States lead the nations. We published recently an account from Grand Rapids, Michigan, of the co-operation of school and library in helping the young to the choice of a calling. In the *School Review*, *l.s.c.*, the principal of a high school explains vocational guidance as he practices it. First, the importance of the choice, and the necessity of an accurate knowledge of various occupations and of the opportunities that they severally offer, are carefully set forth. Next, modern industry is divided into related groups of trades (e.g. the mercantile industries, the manufacturing industries, and the trans-

porting industries), and the fundamental characteristics of each group are examined. Lastly, detailed work is done with the individual pupil, to make plain to him the conditions and requirements of some particular vocation, tentatively chosen.

We are writing for suggestiveness, to provoke thought. And of the school of to-day we are not minded to speak.

Some Reflections.

But let those who have passed the middle zone of life look backward. What a farce it all was! Every clever boy of fifteen, under the influence of a scholarly teacher, was for becoming a scholar, in the technical sense—a Porson or at least a Calverley. Of a hundred boys that received a strictly classical education did twenty get from it a tincture of scholarship, some nascent love of literature? Did the rest get anything? They all wrote their dreary essays on "The Choice of a Profession," knowing of vocations as little as their teachers, for whom the ideal life was one spent in the collating of manuscripts. We would not fling our secondary education hastily into the melting pot. But Vocationalism, if it does nothing else, may help to obliterate finally the medieval tradition that the one true calling is the call to book-learning.

FRANCE.

If men are not more moral than they were, it is not the fault of the moralists, of whose activity here is an example. A generous Alsacian has placed 20,000 francs at the disposal of the Ligue Française d'Education Morale, and the society announces two competitions. Prizes are offered for: (i) A collection of popular stories relating the noblest acts of virtue on the records of history; (ii) A selection of extracts representing the flower of the moral lessons which are contained in the sacred and profane literature of the various peoples. The two collections, intended for the use of families, will incite to right-doing at once by the force of example and by the beauty of the instructions. In each competition there will be a first prize of 5,000 francs, and some smaller prizes, as fixed by the jury, whilst 2,000 francs will be devoted to the diffusion of the successful work, which must be written in French. The competition will close on June 30, 1915. Manuscripts must be addressed to the Ligue Française d'Education Morale, 125 rue du Ranelagh, Paris, 16e.

We have faith in Scouting as an inspiration and a discipline for boys: we love it for brightening the sombre streets. But there are those with whom the Scouts—who should make the whole world akin—are not popular.

Scouts at bay.

It was on a Sunday in May, and at Le Bourget, near Paris, a place where in October and in December, 1870, French and Germans closed in memorable strife. Some sixty *Eclaireurs* (Scouts) were marching to the foot of the war memorial. Arrived in the Place de la Mairie, they found themselves amid a crowd of ill-favoured louts, who greeted them with shrill whistling and hostile cries. The commander of the company, to avoid a collision, caused drums and clarions to be silent, and the march continued towards the monument. At 8 o'clock, on the way back, the scene was repeated at the same spot. The *apaches* reviled the Scouts, then pelted them with stones. The patience even of an *Eclaireur* has its limits. The moment was come to put into practice the more martial of the principles in which Scouts are trained. The boys, without losing their coolheadedness, formed column of attack and fell on their enemies, who were not expecting such a reply. For ten minutes the fight lasted; twelve staffs and some clarions were broken on the heads of adversaries; the camping axes proved serviceable weapons. Presently ten of the roughs were prostrate. But the conflict was not over; the enemy received reinforcements, and the *Eclaireurs* retreated on the Gendarmerie, or Police Barracks. There the roll was called and an examination made—none missing, one wounded in the thigh. The *apaches* must have fared ill, for, although they carried off their wounded, some cyclists coming on the field later picked up caps, garments in tatters, and a fragment of a human ear. Such was the latest battle of Le Bourget.

Some of our readers view State control of education with suspicion; others would make it absolute. In this paragraph we do but submit an illustration of the actual working of State control in France.

The Case of Mlle S.

At its first session this year the Conseil supérieur had before it, on appeal, an *affaire disciplinaire*. Mlle S., head mistress of a private day-school, consented to let three little girls, cousins, whose parents lived at a distance, sleep in the school on Monday, Tuesday, and Friday in each week, the children returning home on Wednesdays and Saturdays when work was over and Thursday being a holiday. The Conseil départemental of Tarn-et-Garonne saw in her conduct a grave offence, and in punishment for it prohibited her from teaching in the commune. Before the Conseil supérieur her advocate urged that she had in good faith believed herself free

to house the girls, so as to spare them the fatigue of a long daily journey; and that, as soon as the law was set at work, she stated frankly what she had done. The Conseil supérieur regarded the matter leniently and revoked the prohibition to teach; but it placed a censure of her on record; she had received boarders without having made any declaration of the opening of a boarding-school; she had not made the necessary arrangements for fit surveillance at night; and she had employed in such surveillance a person not qualified to exercise it. Her good faith saved her, or she would have taught no more in the commune.

GERMANY.

If London has its new Museum buildings, Berlin was lately much interested in the *Einweihung* (say "Inauguration," if you please to do so) of the new *Bibliothek- und Academiegebäude*. It has its north front on the Dorotheenstrasse: its south, Unter den Linden, where the main entrance is. In part of the structure the Academie der Wissenschaften is sheltered. The middle building contains the staircase and the large reading-rooms of the Royal and the University Library—the former a domed chamber with four hundred seats for readers. The time required for building was more than ten years; but the Royal and the University Library have been worked in the new structure since 1910. A total expenditure of 22 million Marks was involved. The "Inauguration" took place in presence of the Emperor and was made the occasion of a liberal distribution of decorations.

QUEENSLAND.

In Queensland—in Victoria too—a movement is on foot to enlist teachers and children in the protection of birds. It is proposed to establish a Queensland Gould League of Bird Lovers, called Gould after the famous ornithologist. The aims of the proposed society are these: To protect all birds except those that are noxious; to prevent the unnecessary collection of wild birds' eggs; to disseminate knowledge regarding the birds of Queensland, so as to help members, teachers and others to identify them; to secure the general use of one common name for each bird; to cultivate a more friendly attitude towards birds by fostering an intelligent interest in them and their habits; and to encourage the formation of bird sanctuaries. The subscription for adults is to be one shilling a year and for school children a penny.

ORANGE FREE STATE.

The Report (just received) of the Director of Education deals with the year ended December 31, 1912—a year remarkable for the increase (134) in the number of schools. The policy of the Education Department is in favour of a few large, well-staffed and well-equipped schools rather than of many small ones: but with wide, sparsely populated areas to be provided for a number of isolated one-teacher schools is inevitable. Attendance showed as pleasing a growth as the number of schools. The compulsory standard of attendance has been raised from Standard IV to Standard VI; and parents and guardians are now required to send children to school between the ages of seven and sixteen until the latter standard has been reached. State-aid is granted, in certain circumstances, to private schools. The collection of school fees is a cause of difficulty, and the regulations that control it need revision. The Province has eighteen secondary schools duly approved by the Administration, and many primary schools have secondary departments; but the classification of schools has not yet been reduced to a satisfactory system. For Continuation little has been done; the evening classes at the Brebner School were, however, continued regularly. As to teachers, the salaries offered in Orange Free State are inadequate, so that the Authorities have often to accept the services of persons without professional or academic qualifications.

SAFE NOVELS.

Chance. By JOSEPH CONRAD. (6s. Methuen.) "Chance," if not Mr. Conrad's masterpiece, is the most elaborate and highly finished of his novels, revealing on a fuller scale his powers of psychological analysis and dramatic presentation. The plot is of the simplest, with no interludes and hardly a sensational incident till towards the very end; but from the first chapter, which introduces us to the chief characters, up to the second marriage, which rings the curtain down, the reader's

interest never flags. "Chief characters" is misleading, for Marlow, a retired sea captain, and Powell the second mate on the hero's ship, play a very secondary part in the story, but the narrative is put mainly in their mouths, the author acting as the chorus in a Greek Play, questioning, commenting, and filling in the gaps. The aim is the same as that of the old-fashioned novels in the form of letters, and of Browning in the "King and the Book." It is a tale of double quixotry. Captain Anthony marries the daughter of a convict to save her from despair and possibly suicide, and Flora de Barral marries Anthony, whom she does not love, to provide her father, on his release, with a protector and the chance of a new start in life. Part I is a tragi-comedy, relieved by "the accident—called Fyne" and Mrs. Fyne (the sister of Anthony), a masculine feminist, a strange admixture of benevolence and bluntness of human sympathies, and her husband, a simple-hearted, amiable nonentity, who serves as an admirable foil. The "Damsel," as it is entitled, is a study of a highly-strung girl on whom lies an ancestral curse, hurled suddenly from luxury to destitution by a swindler father, of whose guilt no proofs can convince her—an Iphigenia slowly done to death by the pin-pricks of relations and strangers. Part II, an unmixed tragedy till the last act, sees the three embarked on a voyage to Australia, Anthony a husband only in name. Flora, chained like a galley slave to her father—in whom even she has lost faith—and the ex-convict, now in intention a cold-blooded murderer. For a parallel to Part II we must go to Victor Hugo.

We will not attempt to analyse the style, but must quote an example. "It was then in a moment of entranced vision, an hour or so before sunrise, that the river was revealed to him for all time, like a fair face often seen before, which is suddenly perceived to be the expression of an inner and unexpected beauty, of that something unique and only its own which rouses a passion of wonder and fidelity and an unappeasable memory of its charm."

PRIZE COMPETITIONS.

The winner of the Translation Prize for April is H. V. Waterfield, Esq., Eastbourne College.

The Translation Prizes for May are awarded to "Boy" (verse) and to "Memus" (prose)

Le vent hurle, ce soir, avec de longs sanglots
Et fait tourbillonner la neige de décembre.
J'ai le plaisir douillet d'être dans une chambre
Bien chaude, que défend l'abri des volets clos.
Une lampe, d'écrans épais emmitoufflée,
Eclaire faiblement les objets familiers
Aux contours vagues, et les angles sont noyés
D'ombre tiède, comme une ouate amoncelée.
Rien n'est plus doux que cet effacement discret
Des choses dont on sait les présences amies,
Et qu'on devine autour de soi comme endormies,
Plus tendres d'être ainsi, dans l'intime retrait.
Je suis tout pénétré d'une exquise paresse.
Mon corps dans le fauteuil à l'assoupissement
Propice s'allonge délicieusement,
Et toute la bonté des choses me caresse.
Je fume, je rêve, et, dans l'ombre où tout se fond,
Mes yeux demi-clos et ma pensée embrumée
Ne distinguent plus bien si c'est de la fumée
Ou des rêves qui s'envolent vers le plafond.
Je voudrais vivre ainsi des heures, des années,
Lentement, tièdement, sans penser, sans songer
Que le temps court et que je suis un passager
Qu'engloutira le flot haineux des destinées.
Et voici que j'entends le bruit, l'horrible bruit
De la pendule, avec son tic-tac implacable
Qui mesure le temps sans hâte, et qui m'accable
De son morne refrain: L'heure fuit, l'heure fuit...—

Je saisis l'odieux instrument, et je casse
Je ne sais quel ressort de ce monstre d'acier.
Là! Je n'entendrai plus l'appel du balancier
Résonner ironique au fond de ta carcasse!
Je m'apaise. Au fauteuil paresseux je m'étends,
Et peu à peu, dans ma muette solitude,
Je retrouve ma chère et tiède quiétude
Et la sérénité de vivre hors du temps.

Mais tout à coup, là-bas, déchirant le silence
Et violant l'abri de mon intimité,
Une horloge lugubre avec férocité
Annonce :—Il est minuit. Un jour nouveau commence...—

By "Boy."

The night-wind wails and sobs, now loud, now low,
Whilst I in cosy "den" sit snug and warm,
The shutters fastened close against the storm
That whirls about my roof December's snow.
The darkened lamp's dim twilight throws around
The old familiar objects of my room
An air of mystery; and deep in gloom
The corners, as in billowy cloud, are drowned.
What sweeter than these old companions thus,
Divined rather than seen, in quaint disguise
Of charmed sleep, cheating our puzzled eyes,
And all the dearer for deluding us?
A languorous delight seems to possess
My inmost being: steeped in drowsy bliss
Of ease and idleness, ah! surely this
Must be the height of human happiness.
My pipe alight, I ponder in the dim,
Dreamy obscurity with half-closed eyes,
And wit but half awake that scarce describes
If wraiths or smoke-wreaths o'er me swirl and swim.
How gladly thus my hours, my years I'd spend
In thoughtless blissfulness, without a sigh
That time the while is passing, and that I
Must pass with it to my predestined end!
But ah! that wretched time-piece—how it tries
One's nerves with its relentless level tick,
That seems to be for ever saying, "Quick,
Make haste, time flies, time flies, time flies!"
I seize the hateful thing, and in a trice
Take vengeance on the steely monster's heart.
There! That's for playing a sermonizing part,
My friend; I've had enough of your advice.
That's better. Now for easy-chair again;
Mute solitude perchance will soon restore
My cherished calm; and then, methinks, once more
Timeless serenity. . . . But all in vain!
For suddenly a sound, a sound of fear:
A silence-shattering clock hard by destroys
My peaceful visions with its dismal noise:
"Midnight," it groans; "another day is here."

THE TIME-PIECE.

By the PRIZE EDITOR.

To-night the wind is howling; with a moan
It sweeps in eddies the December snows.
In my warm chamber stretched at ease I doze,
Lulled by the melancholy monotone.
My lamp (a low-drawn shade obscures its rays)
Each dear familiar object half reveals,
And, as if swathed with films of wool, conceals
Outlines and angles in a mellow haze.
How exquisite the bashful veil thus drawn
O'er the loved comrades of my solitude!
They seem asleep, and in that blessed mood
More intimate than in the garish dawn.
Idlesse itself to me is perfect bliss
As in the pillowy depths of my armchair
I lie supine, without a wish or care,
And muse how good a thing mere living is!
I muse, I smoke, and as with half-shut eyes
And vacant mind I watch the shadowy gleams,
I cannot tell if it be fancy's dreams
Or smoke that upwards to the ceiling flies.
Thus would I live for hours, for days, for years,
In apathetic calm, of time and fate
Oblivious, and the abyss that soon or late
Engulfs the voyager, where'er he steers.
But hark! I hear the time-piece at my back,
The sharp, metallic, resonant refrain—
Time flies, time flies, again and yet again—
It maddens me, it puts me on the rack.

I seize the hateful monster, and I crack
Something inside him—mainspring, cog, or wheel:
Enough, no more the mockery shall I feel
Of that intolerable tic, tic, tac.
Calm by degrees returns; once more the spell
Of my armchair is on me. Sweet to me,
How sweet is passionless tranquillity,
How good beyond the bounds of time to dwell!
But sudden a new sound the silence breaks;
With twelve harsh strokes that shatter my repose,
The minster clock booms out the solemn close
Of one day, and for me a new day wakes.

By "MEMUS."

To-night the wind wails loud and whirls December's snow.
Mine is the luxury of a cozy room that closed shutters shelter from the storm.

Lamplight, muffled by heavy screens, falls softly on familiar things, dimly outlined, and corners lie buried beneath warm fleecy shadow.

Nothing is so delightful as the quiet effacement of things whose friendly presence we feel, things we divine around us in the loved sanctum, as if asleep, but the dearer for that.

Sweet idleness possesses me. I love to loll in the drowsy arm-chair and I revel in the full charm of things.

I smoke, I dream and in the shadow where all things mingle, my half-closed eyes and cloudy thought have ceased to discern whether it is smoke or dreams that circle upwards.

Thus would I live for hours, for years, slowly, luxuriously, without thinking, without dreaming even that time speeds and that I am a voyager to be engulfed in Fate's cruel waves.

But now I hear a sound, the hateful sound of the clock whose relentless tic-tac deliberately measures the hours and crushes me with its dull refrain: "Time flies, time flies."

I seize the loathed object and in the brazen monster I break some spring. There! Never again shall I hear the pendulum's strident call reverberate in your hollow frame!

I am at peace. Idly I stretch in the arm-chair, and soon, in the unbroken stillness, I recover my loved and soothing quiet and the bliss of living without time—when suddenly, yonder, rending the silence and violating the sanctity of my retreat, a gloomy steeple-clock peals forth: "Midnight and a new day."

We classify the 47 verse and the 69 prose versions as follows:—

POETRY.

First Class.—H.G., Boy, I.F.R., S.E.H., Aymar, Zélide, Jetsam, Chislehurst.

Second Class.—Greenfinch, Instar, Artagall, Weston, 100,000, Iolanda, Eicarg, D.N.L., W.E.M., Francesca, Martin, Chris.

Third Class.—Excelsior, The Flint man, Last Hope, Aiglon, Job, Outis, Wunschelrute.

Fourth Class.—Que pensez-vous? On peut toujours, Rattery, Sunbeam, Mignonette, Paresseuse, M.P.S.

Fifth Class.—M.M.T.A., Rhymer, Shotover, Broomstick, Fuimus, Martin, R.O.T., Quince, Hal, Enna, Marjoram, Pol, Onoto.

PROSE.

First Class.—Novocastrian, Allobroge, Memus, Agnes Bell A.B., Sirach.

Second Class.—L.B., I.D.M., Chingleput, Ellis, L.M.L., Scala, Oakthorpe, P.D.C., G.R.C., W.H.S., Piocheuse, Corbeil, Institutrice, Areopagitica, Anemone, E.L.G., Stanstead-Abbott p.m., Excelsior, L.C., La Bohème, M.M.S., G.A.J., à sec, Peg, Horatio, Barbe-bleue, Marie François, Yvetot, Castle Rackrent, Ester Hazé.

Third Class.—M.P.S., E.M.M.D., G.F.O.J., E.J.P., Anitra, Parsifal, Aquae Solis, L.B., White Hawthorn, E.S.S., M.J.B., Tramore, D.E.H., Bandello, Sweet Mam'selle, M.A. Holbrook, Mousmée, Sunni, Das Bächlein.

Fourth Class.—Essayez, M.E.H.S., Dunelm, M.E.F.R., Auto, U.N.

Fifth Class.—Crusoe, The Sofa, Miss, Yeanes, Lolo, Lakist, S.T.A., Tick.

The passage last month was taken from a recent anthology of the Symbolistes—living poets who are attempting to body forth in lyric poetry the actualities of the world around. Though one of the simplest in the volume, it presents sufficient difficulties to the translator, both in verse and prose—perhaps even greater to the latter, who cannot be allowed *à peu près*. But even more intolerable are construed—"I have the luxurious pleasure," "this discreet effacement," "all the goodness of things soothes me."

I will note, line by line, the commonest mistakes. 1, "To-

PITMAN'S SHORTHAND TEACHERS' JOINT EXAMINING BOARD.

President—ALFRED PITMAN, Esq.
 EXAMINATIONS for the Shorthand Teacher's Diploma of this BOARD are held in the principal cities of the United Kingdom throughout the year. The Diploma is recognized by County Councils and other important Educational Authorities as the highest possible testimony to a Teacher's ability and its possession is, therefore, of the utmost value to Teachers seeking appointments. The Diploma is specified as a qualification by the Department of Technical Instruction for Ireland. Full particulars of the examination, together with a copy of "HINTS TO CANDIDATES," may be had, post free, from the
 EXAMINATIONS SECRETARY, PHONETIC INSTITUTE, BATH.

BOOKS BOUGHT AT GOOD PRICES.

night," not "this evening," should come first. 2, "Whirls in eddies," not "makes" or "causes." 4, "Very warm" was common. 5, "A shade," not "screen." The whole room is in chiaroscuro. 7, Not the "corners" of the room, but of the furniture and objects, which appear as if a film of cotton-wool were spread over them. 9, "This coy withdrawal from our gaze." 14, Few saw that *à l'assoupissement propice*, "inviting repose," qualifies *fauteuil*. 16, The hardest line in the poem to render: "The charm of this fair world bewitches me" is the best I can offer in prose. Verse, as I said, is easier. 26, "Time-piece," to distinguish it from *horloge* below. 29, "Engine," "piece of mechanism" (Wordsworth has "pulse of the machine")—anything better than "instrument." 33, "I grow calm again." An armchair may figuratively be called "indolent," but hardly "idle" or "lazy." 37, *Là-bas*, often omitted, may refer to the clock on the stairs or, more probably, to the town-hall or church clock.

For the verse prize it was hard to decide between "H.G.," "Boy," and "Zéolide." "Zéolide" would have won but for an unfortunate blunder—*la pendule*, "pendulum." We give two of his stanzas:

"The feeble rays that pierce the lamp's dark shade
Turn the familiar objects in the room
To outlines vague, adrift in misty gloom,
The warm, soft fleeciness by shadows made.

"Familiar shapes hide in the gloom apart,
Like friends unseen, yet known, and peacefully
Sleep round me, sharing this my privacy,
In their aloofness dearer to my heart."

Here is "H.G.'s" version of the same stanzas:

"The lamp, dim-shaded, with its muffled rays,
But half reveals my household gods; a haze
Lingers around them, fleecy-white, and drapes
Their vague, distorted shapes.

"I feel their friendly presence, and I know
That, as though sleeping in this room's warm glow,
The silent, intimate communion here,
The things I love are near."

As a poem "H.G.'s" is the best, but he does not wrestle with the difficulties; e.g. line 16 is shirked. Stanza 8 of "Boy" is weak; line 3 is cacophonous, and line 4 a stopgap.

A Prize of Two Guineas is offered for the best translation of the following passage:—

Cromwell mourut dans la plénitude de son pouvoir et de sa grandeur. Il avait réussi au delà de toute attente, bien plus que n'a réussi aucun autre des hommes qui, par leur génie, se sont élevés, comme lui, au rang suprême, car il avait tenté et accompli, avec un égal succès, les desseins les plus contraires. Pendant dix-huit ans, toujours en scène et toujours vainqueur, il avait tour à tour jeté le désordre et rétabli l'ordre, fait et châtié la révolution, renversé et relevé le gouvernement dans son pays. A chaque moment, dans chaque situation, il démêlait avec une sagacité admirable les passions et les intérêts dominants, pour en faire les instruments de sa propre domination, peu soucieux de se démentir pourvu qu'il triomphât d'accord avec l'instinct public, et donnant pour réponse aux incohérences de sa conduite l'unité ascendante de son pouvoir. Exemple unique peut-être que le même homme ait gouverné les événements les plus opposés et suffi aux plus diverses destinées. Et dans le cours de cette carrière si forte et si changeante, incessamment en butte à toute sorte d'ennemis et de complots, Cromwell eut de plus cette faveur du sort que jamais sa vie ne fut effectivement attaquée; le souverain contre lequel était écrit le pamphlet, *Tuer n'est pas assassiner*, ne se vit jamais en face d'un assassin.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by June 16th, addressed "Prize Editor," THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C."

Those in the First Class are entitled on application to a copy of "Essays, Mock Essays, and Character Sketches."

Translations sent with an addressed and stamped envelope and six penny postage stamps will be returned corrected. Foreign postage stamps are not accepted.

Translations will not be returned unless both these conditions are complied with.

FOR RESIDENT AND DAY STUDENTS.

MICHAELMAS TERM BEGINS THURSDAY, OCTOBER 1st.

LECTURES are given in preparation for all Examinations of the University of London in Arts, Science, and Preliminary Medicine; for the Teacher's Diploma, London; the Teacher's Certificate, Cambridge; and for the Cambridge Higher Local Examination.

There are special courses of Scientific Instruction in Hygiene (designed to furnish training for Women Factory and Sanitary Inspectors and Teachers of Hygiene) and in Horticultural Botany.

A single course in any subject may be attended.

THREE ENTRANCE SCHOLARSHIPS.

One in Arts, two in Science will be offered for competition in June next. Full particulars on application to the PRINCIPAL.

SECONDARY TRAINING DEPARTMENT.

Head of the Department: Miss S. MELHUSH, M.A.

The Course includes full preparation for the Examinations for the Teaching Diplomas granted by the Universities of London and Cambridge.

Students are admitted to the course in October and in January.

One Free Place (value £26 5s.), one Scholarship of the value of £20, and a limited number of grants of £10 are offered for the Course beginning in January, 1915. They will be awarded to the best candidates holding a degree or its equivalent in Arts or Science. Applications for Scholarships or Grants should be sent in on or before December 1st.

For further conditions apply to the HEAD OF THE DEPARTMENT.

MADAME

**BERGMAN ÖSTERBERG'S
PHYSICAL TRAINING COLLEGE,
DARTFORD HEATH, KENT,
FOR RESIDENT STUDENTS.**

The College, the first of its kind in England, was opened in 1885, with the view of training educated women as Teachers of Scientific Physical Education.

The Course of Training conducted by a large and competent staff of teachers, extends over two years. It includes the study of Anatomy, Physiology, Hygiene, Anthropometry, and Theory of Movement. In practical subjects instruction is obtained in Ling's Swedish Gymnastics, Dancing, Outdoor Games, and Medical Gymnastics and Massage. At the end of the Course, examinations are held and certificates of theoretical knowledge and practical efficiency in teaching are awarded to successful students.

The College, which provides 50 separate bed-sitting rooms and several large studies, is situated on very high ground, gravel soil, on the confines of an extensive heath, half an hour from town. It stands in its own fine grounds of fourteen acres, which contain an Outdoor Gymnasium, Running Track, Cricket and Hockey Grounds, Lawn Tennis Courts. The Indoor Gymnasium, 70 ft. by 35 ft., and the Medical Gymnastic Room, 50 ft. by 25 ft., lofty and well ventilated, are fitted up in the most perfect style, all the apparatus having been designed and executed in Stockholm.

The immediate neighbourhood offers over one thousand children for the students' practice as teachers. Hundreds of posts have been obtained through this College, a list of which is to be obtained with the Prospectus.

Students admitted in September.

For particulars apply—THE SECRETARY.

MADAME

**BERGMAN ÖSTERBERG'S
UNION OF TRAINED GYMNASIUM TEACHERS.
Ling's Swedish System.**

Aim of the Union: To advance the cause of Physical Education on scientific lines.

In placing members of this Union as Teachers in Schools, careful and discriminating choice is exercised, and the exact requirements of each School specially considered.—PHYSICAL TRAINING COLLEGE, DARTFORD HEATH, KENT.

**University Tutorial
College,
LONDON.**

(Affiliated to University Correspondence College.)

**ORAL CLASSES**

DURING

THE SUMMER VACATION.

A Morning Class works continuously throughout the Summer with the exception of the third and fourth weeks in July. This Course includes a systematic Revision Class working both mornings and afternoons during the three weeks immediately preceding the September Examination.

**MATRICATION,
SEPTEMBER,
1914.**

Annually, for the last fifteen years, about 100 Students of University Tutorial College have passed London Matriculation.

Vacation Classes in Practical Science for Beginners commence Tuesday, August 4th, meeting daily and extending over four weeks. The Course may be extended for a further two weeks in Practical Physics and Practical Chemistry on payment of a small additional fee.

During the last six years 193 Students of University Tutorial College have passed Inter. Science.

Summer Vacation Classes, including a Complete Revision in Practical and Theoretical work in Chemistry, Physics, Botany, Geology and Zoology, commence Tuesday, August 4th, meeting daily, and extending over four weeks. The Course may be extended for a further two weeks in Practical Physics and Practical Chemistry on payment of a small additional fee.

**B.Sc. AND B.A.,
OCTOBER,
1914.**

At the B.Sc. and B.A. Examinations in October, 1913, 44 Students of University Tutorial College were successful, with 14 places in Honours.

PRIVATE TUITION.

Private tuition may be taken up at any time, either during Term or in the ordinary School Vacations, in all subjects for London University and other Examinations. Fees: Eight hours, £2. 2s.; seven-teen hours, £4. 4s.

No commission charged to Purchasers.

CITY AND GUILDS TECHNICAL COLLEGE, FINSBURY.

(LEONARD STREET, LONDON, E.C.)

Principal: Professor SILVANUS P. THOMPSON, D.Sc., L.L.D., F.R.S.

Full day courses of Instruction in

Mechanical Engineering,

Electrical Engineering,

Civil Engineering,

Industrial and Technical Chemistry.

The training is adapted to the needs of various students including (a) pupils from Secondary Schools above the age of 15 who desire to receive a practical and scientific training bearing upon their future industry or profession; and (b) young men who, having previously served a pupilage or apprenticeship in works, desire to go through a more systematic training in engineering and chemical science.

In addition to Lecture Theatres and Class Rooms, the College contains laboratories and workshops specially equipped for instructional purposes including among others, Engineering and Hydraulic Laboratories, Drawing Offices, Wood and Metal Workshops, Mechanics, Physics, Electrical and Magnetic Laboratories, Dynamo and Generating Rooms, and Chemical Laboratories.

The next Entrance Examination will be held on September 22nd, in the subjects of Mathematics and English, but the Matriculation Examination of any British University is accepted instead.

The Fees are £20 per annum.

The programme of the College giving particulars of Admission, Entrance Examination, Syllabuses of Instruction, the careers to which the training afforded at the College leads, and other information may be had post free on application to the REGISTRAR of the College at the above address.

M.A. (Glasgow).—22.6.14. I have much pleasure in saying that I have passed the degree Examination. Please accept my thanks for the assistance I gained from your tuition, especially as regards textbooks you advised.—JOHN T. CAMERON.

London Matriculation, 1914.—The papers and solutions in Mathematics were of especial value to me. All papers were promptly returned and conscientiously corrected. Your course is economical both of time and money. In short, you have completely satisfied me of the efficacy of the Correspondence System of tuition in connexion with examinations taken after leaving school.—D. A. EDWARDS (successful London Univ. Matric. Exam., Jan. 1914).

London Matriculation.—I attribute my success to the admirable coaching of your College and to the efficient way in which all queries were answered and model solutions, &c., were supplied.—F. H. GOODMAN.

Numerous Successes in University Exams.

Teachers' Certificate.—My work was always thoroughly corrected, and I always appreciated very much the valuable hints which I received. My English and School Management papers in particular afforded excellent preparation for my examination.—A. CUNNINGHAM (successful Teachers' Certificate Exam.).

JUNIOR APPOINTMENTS (C.S.).

(Age 18 to 19½.) (Salary £100 to £350, &c.)

2nd.—Gained 2327 marks in 3 months.

After three months' course with you I have risen 109 places and my marks have increased 2327.

In Higher Mathematics my marks increased 1570.—E. S. WOOD (2nd, Junior Appointments).

6 First, 8 Second, 6 Third Places, and 186 Successes in these Exams.

INDIAN POLICE APPOINTMENTS.

(Age 19 to 21.) (Salary £250 to £2000.)

2 Successes Last Exam.

Previous Exam. 4 out of 5 successful.

FACTORY INSPECTORS.

(Age 21 to 38.) (Salary £200 to £750.)

From D. Buchanan, M.A.—1st.—I am

pleased to inform you that I have secured First Place. My thanks are due to you for the admirable tuition which you afforded me. I wish to mention particularly the excellent hints provided in Arithmetic, Tabular Summary, and Précis.

In Economics, too, your tuition was excellent.—D. BUCHANAN, Port Glasgow (1st, Factory Inspectors, 1st Exam.).

3 Successes in Last Exam.

PATENT OFFICE EXAMINERS.

(Age 20 to 25.) (Salary £150 to £700.)

Last Exam. Patent Office.—I had hardly expected this result, but in any case I should be bound to acknowledge the great value of your tuition; it is without doubt the best method of preparation for an examination of this kind, where one needs expert guidance.—H. E. COLLINS (9th place, Last Patent Office Exam.).

OXFORD AND CAMBRIDGE LOCAL EXAMINATIONS, 1915.

The Oxford and Cambridge Edition

The Publishers will be glad to forward specimen copies as an aid to the selection of the most suitable Textbooks for Examination Preparation and General Class Use.

List of books included in the Oxford and Cambridge Edition prescribed for the 1915 Examinations post free.

Now Ready.

The Oxford and Cambridge **LAY OF THE LAST MINSTREL.** Edited by Rev. F. MARSHALL, M.A. Introduction and Cantos I-III (*Prescribed for Cambridge Preliminary Local, 1915*). With the necessary Notes for the Examination. 8d.

Prescribed for the Oxford and Cambridge Locals, 1914.

The Oxford and Cambridge **LORD OF THE ISLES.** Edited by Rev. F. MARSHALL, M.A. With Introduction, Notes, and Maps for the Examinations 1s. 6d.

Complete Educational Catalogue and Lists for the 1915 Examinations, post free.

London: **GEORGE GILL & SONS, Ltd.**, 13 Warwick Lane, E.C.

BELL'S NEW AND

BELL'S MATHEMATICAL SERIES

For Schools and Colleges.

General Editor: WILLIAM P. MILNE, M.A., D.Sc.,
Clifton College.

ARITHMETIC. By H. FREEMAN, M.A., sometime Scholar at Christ's College, Cambridge; Mathematical Master at the Haberdashers' Aske's School. With or without Answers, **2s. 6d.** Answers, **6d.** net.

Written to meet the needs of teachers who wish a large and varied collection of practical arithmetical questions dealing with subjects within the pupils' sphere of knowledge, and covering the whole range of the secondary school curriculum. The moderate price has been rendered possible by the rigorous exclusion of all "padding."

PROBLEM PAPERS IN ARITHMETIC FOR PREPARATORY SCHOOLS. By T. COOPER SMITH, M.A., late Scholar of University College, Oxford; Mathematical Master, St. Peter's Court, Broadstairs. **1s. 6d.**

A varied collection of original and simple problems, specially designed to enlist the interest of pupils, through being selected from phenomena within their experience.

STATICS. Part I. By R. C. FAWDRY, M.A., B.Sc., sometime Scholar of Corpus Christi College, Cambridge; Head of the Military and Engineering Side, Clifton College. **2s. 6d.**

Written to meet the needs of schools which teach Statics as an essential part of a general liberal education. The experiments on which the fundamental principles are based require only the simplest apparatus, and are specially adapted for classroom demonstration. There is a large collection of examples.

THE ELEMENTS OF NON-EUCLIDEAN GEOMETRY. By D. M. Y. SOMMERVILLE, M.A., D.Sc., Lecturer in Mathematics, University of St. Andrews. **5s.**

This volume is intended for students who are interested in one of the most important branches of modern geometrical thought. The position of Playfair's Axiom in a coherent scheme of geometry is discussed historically and critically, while the work of Lobachevsky and Bolyai is dealt with in considerable detail.

MATHEMATICAL PROBLEM PAPERS FOR SECONDARY SCHOOLS. By C. DAVISON, M.A., Sc.D., Mathematical Master at King Edward's School, Birmingham. **2s. 6d.**

The collection of problem papers included in this volume is intended for use in the middle and some of the upper classes of a secondary school, the questions being confined to arithmetic, plane and solid geometry, and elementary algebra and trigonometry. Many of the problems are original, but the majority have been derived from series of examination papers set in various colleges and schools.

ARITHMETIC. By W. M. BAKER, M.A., and A. A. BOURNE, M.A. In Two Parts. **2s.** each. With Answers Perforated.

EXAMPLES IN ARITHMETIC. By the same Authors. **2s.**

A FIRST NUMERICAL TRIGONOMETRY By W. G. BORCHARDT, M.A., B.Sc., and the Rev. A. D. PERROTT, M.A. **2s. 6d.**

This volume has been written to supply the growing demand for a textbook on Trigonometry suitable for the lower classes of secondary schools, as recommended by the Committee of the Mathematical Association. The authors have drawn freely on their well-known "New Trigonometry for Schools," but the present book is intended for very much younger students, and consequently a large number of quite easy examples are given.

JUNIOR TRIGONOMETRY. By the same Authors. Crown 8vo. **3s. 6d.**

An enlarged edition of the above book, containing chapters on Identities, Equations, and compound Angles, will be found suitable for such examinations as the Cambridge and Oxford Junior Locals, First Class College of Preceptors, Additional Mathematics of the Central Welsh Board, Oxford and Cambridge School Certificates, Scotch Leaving Certificate (Higher Grade), and the Lower Examination in Pure Mathematics of the Board of Education.

BELL'S ENGLISH HISTORY SOURCE BOOKS.

Joint Editors: S. E. WINHOLT, M.A.; KENNETH BELL, M.A., Fellow of All Souls College, Oxford. Crown 8vo. viii + 120 pp. **1s.** net each.

449-1086. THE WELDING OF THE RACE. By the Rev. JOHN WALLIS, M.A.

1086-1154. THE NORMANS IN ENGLAND. By A. E. BLAND, M.A.

1154-1216. THE ANGEVINS AND THE CHARTER. By S. M. TOYNE, M.A.

1216-1307. THE GROWTH OF PARLIAMENT AND THE WAR WITH SCOTLAND. By W. D. ROBIESON, M.A.

1307-1399. WAR AND MISRULE. By A. A. LOCKE.

1399-1485. YORK AND LANCASTER. By W. GARMON JONES, M.A.

1485-1547. THE REFORMATION AND THE RENAISSANCE. By F. W. BEWSHER, B.A.

1547-1603. THE AGE OF ELIZABETH. By ARUNDELL ESDAILE, M.A.

1603-1680. PURITANISM AND LIBERTY. By KENNETH BELL, M.A.

1680-1714. A CONSTITUTION IN MAKING. G. B. PERRETT, M.A.

1714-1760. WALPOLE AND CHATHAM. By K. A. ESDAILE.

1760-1801. AMERICAN INDEPENDENCE AND THE FRENCH REVOLUTION. By S. E. WINHOLT, M.A.

1801-1815. ENGLAND AND NAPOLEON. By S. E. WINHOLT, M.A.

1815-1837. PEACE AND REFORM. By A. C. W. EDWARDS.

1837-1854. COMMERCIAL POLITICS. By R. H. GRETTON.

1854-1876. FROM PALMERSTON TO DISRAELI. By EWING HARDING, B.A.

1876-1897. IMPERIALISM AND MR. GLADSTONE. By R. H. GRETTON, M.A.

1535-1913. CANADA. By JAMES MUNRO, M.A.

A SOURCE BOOK OF LONDON HISTORY. By P. MEADOWS, M.A. **1s. 6d.** net.

AN IDEAL COURSE FOR SECONDARY SCHOOLS.

A HISTORICAL COURSE FOR MIDDLE FORMS. By B. L. K. HENDERSON, M.A., D.Litt., and P. MEADOWS, M.A., Assistant Masters at Haberdashers' Aske's School, Cricklewood. In Four Volumes. Crown 8vo. **2s.** each.

Volume I.—**WESTERN EUROPE.** An Introduction to European History.

Volume II.—**THE ENGLISH NATION. Social and Industrial History.**

Vols. III and IV in preparation.

A HISTORICAL READER ON NOVEL LINES.

THE REAL ATLANTIC CABLE. By A. W. HOLLAND, sometime Scholar of St. John's College, Oxford. Crown 8vo. Illustrated. **2s.**

This book aims at explaining, in simple language, the origin and growth of the many links which connect the British and American peoples.

THE BUILDING OF THE BRITISH EMPIRE. A Reading Book for Schools. By E. M. RICHARDSON, B.A., St. Saviour's and St. Olave's Grammar School. Second Edition. With 22 Illustrations and 10 Maps. **1s. 6d.**

A CONSTITUTIONAL HISTORY OF ENGLAND. By GEORGE GUEST, B.A., Head Master of St. Paul's School, Bournemouth. Crown 8vo. Illustrated. 256 pp. **1s. 6d.**

This volume aims at presenting a complete constitutional history, and is uniform with the same author's "Social History."

EARLY ENGLISH SOCIAL HISTORY. From the Chronicles. By A. F. DODD, B.A., Greystoke Place Training College. viii + 212 pp. **2s.**

SURVEYS OF HISTORY. Greek, Roman, English, French, Biblical, &c. With Intervening Periods. By C. H. RUSSELL, M.A., Assistant Master at Clifton College. Demy 4to. **4s. 6d.**

ANCIENT HISTORY FOR SCHOOLS. From the Earliest Times to the Death of the Emperor Augustus. By E. NIXON, Late Head Mistress of Junior School, Ladies' College, Cheltenham; and H. R. STEEL. With 29 Illustrations and 7 Maps. **2s.**

RECENT BOOKS.

AN OUTLINE HISTORY OF ENGLISH LITERATURE. By Professor W. H. HUDSON. Crown 8vo. 2s. 6d. net.

"It is a clear and thoughtful account not only of the achievements of great writers, but of the changes in national taste and development that influenced them."—*Standard*.

REPRESENTATIVE PASSAGES FROM ENGLISH LITERATURE. Chosen and arranged by Professor W. H. HUDSON. Crown 8vo. 2s. 6d. net.

"This companion to the author's 'An Outline History of English Literature' is very sensibly arranged. . . . A wonderfully varied and satisfying scheme of literary illustration."—*School World*.

EXERCISES IN ENGLISH. Including Dictation, Reproduction, Analysis, Parsing, Classification, Synonyms, Meaning of Words, &c., with Explanation of Methods and Grammatical Terms. By FRED W. BEWSHER, B.A. 1s. net.

This volume, though it is in itself a complete book, is intended to serve as a second part of "Aids to the Writing of English Composition."

A PRACTICAL COURSE IN ENGLISH. By E. J. BALLEE, B.A., Whitgift Grammar School, Croydon. 1s. 6d.

Designed to give the pupil a practical understanding of his mother-tongue and the use of it. The Second Part forms a generous compendium of Exercises in Analysis, Construction, Correction of Errors, turning Direct Speech into Indirect, and also a Set of Local Examination Papers in Grammar and Composition.

A FIRST ENGLISH GRAMMAR. By the Rev. J. E. W. WALLIS, B.A., Christ's Hospital. Strongly bound in cloth. 1s.

This book, based on the recommendations of the Joint Committee on Grammatical Terminology, is designed to give the "irreducible minimum" of English Grammar in as clear a manner as possible.

BELL'S SIXPENNY ENGLISH TEXTS.

Edited by S. E. WINBOLT, M.A., Christ's Hospital, Horsham. Fcap. 8vo. With Biographical and Critical Introduction and Glossaries where necessary. Strongly bound in cloth, 6d.

Teachers of English nowadays want short, well-printed texts which will stand wear and tear, and which are published at a price which makes it possible to change them frequently. Messrs. Bell think that the volumes of this series will be recognized at a glance as exactly fulfilling this purpose.

*Poems by John Milton.—"Spenser's "Faerie Queene," Book I.—"Poems by Tennyson.—Selections from Byron.—"Macaulay's "History of England," Chapter III.—Gibbon's "Decline and Fall," Chapters I to III.—Selections from Pope.—Poems by Gray and Cowper.—Plutarch's Lives of Caesar and Cicero.—Plutarch's Lives of Themistokles, Perikles, and Alkibiades.—"English Elegiacs.—"Selections from Chaucer.—Kingsley's Heroes.—Irving's Sketch Book (Selections).—Macaulay's Lays of Ancient Rome.

* Also issued, interleaved, at 1s. each, bound in cloth boards.

† Also issued with Notes; specially suitable for Cambridge Locals. 1s.

HIGHWAYS OF THE WORLD. By A. E. MCKILLIAM, M.A. With numerous Maps and Plans. Second Edition. 1s. 6d.

An Ideal Scheme in Geography and Industrial History, covering the ground from the old Caravan and Trade Routes down to the Suez and Panama Canals, the C. P. Railway, and the Discoveries of the South Pole.

THE BRITISH EMPIRE BEYOND THE SEAS. An Introduction to World Geography. By MARION T. NEWBIGIN, D.Sc. (London), Editor of *The Scottish Geographical Magazine*. With upwards of 30 Maps and Diagrams. Crown 8vo. 3s. 6d.

GRAMMAIRE FRANÇAISE MODERNE.

By M. DESHUMBERT, late Professor at the Staff College, Camberley, and at the Royal Military College, Sandhurst; and MARC CEPPI, Whitgift Grammar School, Croydon. Issued in Two volumes; one with the Rules in French and the other with the Rules in English. Crown 8vo. 2s. 6d. either volume.

SENTENCE EXPANSION. Leading to Free Composition in French by the Direct Method. By MARC CEPPI and HENRY RAYMENT. 1s.

An attempt to solve one of the chief difficulties encountered in teaching by the Direct Method—that is, the difficulty of getting free composition done decently and fairly accurately. Pupils either think in English and translate therefrom, or, if they work honestly from their stock of French words and idioms, they lack a systematic plan for arranging their material, and the aim of this volume is to remove these difficulties.

DIFFERENTIAL PARTNERSHIP METHOD OF FRENCH CONVERSATION. THE THINGS ABOUT US, AND A FEW OTHERS. A Book of Simple French Conversation. In Two Volumes to be used by alternate pupils. Small crown 8vo, limp cloth, 8d. each.

A new system of teaching French, in which the students work in partnerships of two from different booklets, by means of question and answer. The method has been found by the author to be most successful, and is abreast of the latest tendencies in the teaching of modern languages.

A PRIMER OF PRACTICE ON THE FOUR FRENCH CONJUGATIONS. By HENRIETTA M. ARTHUR. 6d. net.

BELL'S STANDARD FRENCH TEXTS.

Edited by MARC CEPPI. Crown 8vo. Each with brief Biographical Sketch, Notes, Questionnaire, Specimen Phonetic Transcript, and Partial Vocabulary.

This series is issued in two forms—I. For the Direct Method, with the Notes, Life, and Vocabulary in French. II. With English Notes, Life, and French-English Vocabulary.

FIRST VOLUMES:

MÉRIMÉE'S COLOMBA. Edited by A. H. SMITH, M.A., Docteur de l'Université de Paris. 2s.

MOREAU'S LA SOURIS BLANCHE. Edited by M. CEPPI, Whitgift School, Croydon. 1s.

DAUDET'S LETTRES DE MON MOULIN. Edited by M. CEPPI. 1s. 6d.

ERCKMANN-CHATRIAN'S WATERLOO. Edited by F. DAMIENS, Officier d'Académie, Senior Instructor in French at the Royal Military College, Sandhurst. With a Map. 2s. 6d.

PONS TIRONUM. A First Latin Reader.

Illustrated. With Summary of Grammar Exercises and Latin Vocabulary. By R. B. APPLETON, M.A., and W. H. S. JONES, M.A., both of Perse School, Cambridge. 1s.

This is a fourth-term book on the Direct Method, the object of which is to teach the regular Latin syntax by means of a very simple narrative.

OLIM. A Book of Easy Latin Plays.

By EFFIE RYLE, Classical Mistress at Aigburth Vale High School, Liverpool. 1s.

"Olim" is a small book of Latin plays and dialogues, written in the hope that it may help to make Roman "Antiquity" real, and may be used as a supplementary reading book for the second or third year of Latin.

THE SHORTER AENEID. Selected and Arranged with Brief Notes by H. H. HARDY, M.A., Rugby School. With a Preface and Introduction by Professor H. E. BUTLER. Crown 8vo. 2s. 6d.

Messrs. RIVINGTONS' LIST

BRITISH HISTORY. From the Earliest Times to the Present Day. With a History of the Overseas Dominions.

By L. CECIL SMITH, M.A., Modern History Master at St. Paul's School, assisted by R. L. GIVERN, M.A., Master at Colet Court, and F. W. BEWSHER, B.A., Master at St. Paul's School. In one volume, 5s. Or in two periods:

Period I, to Richard III, 1485. 2s. 6d.

Period II, to George V, 1912. 3s. 6d.

This book may be used for ordinary form work, but for advanced pupils there is plenty of advanced work—e.g. chapters on *Constitutional and Economic History*, *Colonial History*, Appendices on (1) Political terms and our present machinery of government, (2) Architecture, (3) Literature, (4) the Navy. Emphasis is also laid on *European history* in so far as it affects English history, and on *Geography* as influencing history.

A JUNIOR BRITISH HISTORY.

By R. L. GIVERN, M.A., and F. W. BEWSHER, B.A. One vol., 3s.; or in Two Parts, 1s. 6d. each.

This book although based on the above work, is written in very simple language, in order to meet the needs of Preparatory School work.

A HISTORY OF ENGLAND AND THE BRITISH EMPIRE.

By ARTHUR D. INNES, Author of "An Outline of British History," &c. In Four Volumes. With Maps and Plans, 6s. each net.

It is intended for the use of Upper Forms of Schools, University Students, and candidates for Civil Service and other examinations, as well as for the general reader. It is written in an attractive style, thoroughly abreast of present knowledge, and in line with modern thought and requirements. The type is very clear and readable, and the volumes are furnished with Plans and coloured folding out Maps.

Vol. I. Before the English came, to 1485. } Published.

Vol. II. 1485-1688.

Vol. III. 1689-1802. [In July, 1914.]

Vol. IV. 1802-1914. [In January, 1915.]

Also a Library Edition. 10s. 6d. net each volume.

AN OUTLINE OF BRITISH HISTORY.

By ARTHUR D. INNES. One Vol., 4s. 6d., or in Two Parts:

Part I. Earliest Times to 1763. 2s. 6d.

Part II. 1760-1910. 2s.

JUNIOR SCHOOL BRITISH HISTORY.

By ARTHUR D. INNES. With Maps. 2s. 6d.

CONTENTS: Before the Norman Conquest, 1066—The Making of a Nation—National Growth—The Tudor Period—Under the Stuarts—The Georgian Era—From George IV to George V.

A SHORT BRITISH HISTORY.

By W. S. ROBINSON, M.A. With Illustrations, Maps, and Plans. One Vol., 2s. 6d.

Period I. To Elizabeth, 1603. 1s. 4d.

Period II. To George V. 1s. 4d. [In preparation.]

THE STORY OF ENGLAND.

A History for Junior Forms.

By W. S. ROBINSON, M.A. With Illustrations, Maps, and Plans. In four parts.

Part I. From Early Times to 1272. 2s. } Parts I and II. in One Vol. 3s. 6d.

Part II. 1272 to 1603. 2s.

Part III. 1603 to 1760. 2s. } Parts III and IV. in One Vol. 4s.

Part IV. 1760 to 1910. 2s. 6d.

AN ILLUSTRATED HISTORY OF ENGLAND.

For Middle Forms of Schools.

By W. S. ROBINSON, M.A. In One Vol., 3s. 6d. Or in Two Periods:

Period I. To End of Commonwealth, 1660. 2s.

Period II. To Edward VII, 1910. 2s.

ELEMENTARY. LATIN PROSE EXERCISES.

Designed as an Introduction to North and Hillard's Latin Prose Composition, and may be used from the time when Latin is begun. By the Rev. A. E. HILLARD, D.D., High Master of St. Paul's School, London, and C. G. BOTTING, M.A., Assistant Master at St. Paul's School. 2s. 6d.

A LATIN VERSION. 3s. 8d. post free, direct from the Publishers only to Teachers.

LATIN PROSE COMPOSITION.

For the Middle Forms of Schools.

By M. A. NORTH, M.A., and the Rev. A. E. HILLARD, D.D. 3s. 6d.

A LATIN VERSION. 6s. 2d. net post free, direct from the Publishers only to Teachers.

FIRST LESSONS IN LATIN GRAMMAR AND TRANSLATION.

By W. GREENSTOCK, B.A., Assistant Master at Malvern College. 2s. 6d.

This book contains 115 exercises with Latin-English and some English-Latin sentences illustrating graduated lessons of Accidence and Syntax, forming an introduction to continuous narratives.

RIVINGTONS' GRADED FIRST LATIN BOOKS.

A new and modern set of six cheap books for beginners in Latin. Containing Latin into English and English into Latin Lessons, with Grammar, and Accidence and a Latin-English and an English-Latin Vocabulary.

Books I and II. 1s. each.

Book III. 1s.

Books IV, V, and VI. [In preparation.]

FIRST LATIN TRANSLATION BOOK.

Containing 173 Latin Passages, with Preparations, Notes, and a Latin-English Vocabulary; and English Exercises for Re-translation, with an English-Latin Vocabulary.

By A. H. THOMAS, M.A. 1s. 6d.

INITIA LATINA.

A Book of Latin Grammar, Translations, and Exercises for Beginners, dealing with the Simple Sentence, and with the Accidence to the end of the Regular Verbs.

By E. D. MANSFIELD, M.A. 2s.

A LATIN VERSION. 3s. 8d. net post free, direct from the Publishers only to Teachers.

EXERCISES IN LATIN PROSE.

With Notes and vocabularies.

By E. D. MANSFIELD, M.A. 2s. 6d.

A LATIN VERSION. 5s. 2d. net post free, direct from the Publishers only to Teachers.

RIVINGTONS' SINGLE TERM LATIN READERS.

A cheap and graded set of Easy Reading Books, each adapted for a full Term's work, allowing time for revision and examinations.

With Notes, Exercises (except the First and Sixth Terms), and Vocabularies.

FIRST TERM.—Three Books, 8d. each (of equal difficulty).

SECOND TERM.—Three Books 1s. each (of equal difficulty).

THIRD TERM.—Three Books 1s. each (of equal difficulty).

FOURTH TERM.—Three Books, 1s. each (of equal difficulty).

FIFTH TERM.—Three Books, 1s. 4d. each (of equal difficulty).

SIXTH TERM.—Three Books, 9d. each. Easy Selections from Ovid, increasing in difficulty, to be read with the Books of the Fourth and Fifth Terms.

ENGLISH GRAMMAR AND COMPOSITION.

Part I. First Year Course. 1s.

Part II. Second Year Course. 1s. 6d.

Part III. Middle School English Composition. [In preparation.]

By G. A. TWENTYMAN, B.A., Assistant Master at Manchester Grammar School.

An attempt is made to provide such material in Grammar and Composition as is suitable for the foundation of a satisfactory prose style. As the ultimate aim of the Course is to enable boys to write English, the illustrative examples and the matter of the exercises are taken almost entirely from prose authors. The use of grammatical terms is reduced as far as possible.

MATERIAL FOR PRÉCIS WRITING.

Compiled by H. A. TREBLE, M.A., Senior English Master of the Borough School for Boys, Croydon. 3s. 6d. [Just ready.]

The exercises in the first part of this book will be found suitable for candidates preparing for the London Matriculation and the Central Welsh Board Examinations. They may be used in general as preparatory to the more difficult exercises contained in the second part, and several of them can be used as Exercises in Indexing.

A COURSE OF GEOMETRY—THEORETICAL AND PRACTICAL.

A Class-book for Secondary and Technical Schools.

By A. H. BELL, B.Sc., Director of Higher Education, Sheerness. With numerous Diagrams. 2s. 6d. [Nearly ready.]

This book covers the ground of Euclid's first three books and part of the sixth, makes great calls on the reasoning powers of the pupil, does not circumvent the teacher, and deals with applications to Surveying, Geography, Science, &c. The spirit of the work resembles that of the Board of Education Circulars on the teaching of Geometry. The course is suitable for the usual examinations, including the Civil Service Examination for Apprentices and Artificers.

A SHORT OLD TESTAMENT HISTORY.

Being an Abridgment and Simplification of "Old Testament History." A continuous narrative from the Creation to the time of Christ.

By the Rev. A. R. WHITHAM, M.A. With Maps and Plans. 2s. 6d., or in Two Parts, 1s. 3d. each.

Part I. The Creation to Samuel and Saul.

Part II. Saul and David to the Time of Christ. [Just Published.]

SINGLE TERM FRENCH READERS.

Six Elementary books, cheap, of graduated difficulty. With full vocabularies, special and general vocabularies, grammar headings, French-English and English-French. Suitable for a full term's work, allowing time for revision and examination. The books are carefully graduated and short stories are introduced by degrees. By B. MISSSEN, M.-ès-A., Assistant Master at Harrow School.

TERM I, 9d. and TERM II, 1s.

TERM III, 1s. This contains a continuous story re-written for beginners, mainly founded on part of *Bertrand du Guesclin* by Emile de Bonnechose.

TERM IV, 1s. This also contains a continuous story re-written for beginners.

By A. R. FLORIAN, M.A.

JUNIOR PASSAGES FOR TRANSLATION INTO FRENCH.

1s. 6d. [Nearly ready.]

SENIOR PASSAGES.

[In the Press.]

A TEACHER'S KEY TO EACH COURSE.

[In the Press.]

JUNIOR FRENCH UNSEENS.

1s. 4d.

SENIOR FRENCH UNSEENS.

1s. 6d.

OCCASIONAL NOTES.

THE bifurcation of the Finance Bill is a distinct setback to educational progress, and it postpones for another year the large reforms foreshadowed by Mr. Pease. All are agreed that a large additional grant from the Treasury is the first necessity, and it is hard that this should have to wait till questions of rating are settled. Meanwhile, till the second part of the Finance Bill passes the House of Lords, we cannot tell whether the additional education grant for the current year will be large or small. That part of it which is secure Mr. Pease proposes to allot as follows: To free meals, £77,000; to schools for the blind and physically defective, £27,000; grant for epidemics, £55,000; to health work, £50,000. It will be noted that none of these directly promotes education: all are of the nature of Poor Law relief. At the meeting of the National Education Association on June 23, strong objection was taken by the President, Lord Sheffield, Mr. John Massie, and other speakers to the repeal of the clause in the Act of 1891 enforcing free education, and the substitute proposed by Mr. Pease—the withdrawal of grants from schools charging fees—was condemned as wholly inadequate. Objection was likewise taken to the block grant as not discriminating between schools that gave a liberal education and schools content with the beggarly elements. The members who talked out the Children (Employment and School Attendance) Bill—a clique of Lancashire employers backed by the professional obstructives of the Opposition—were justly denounced by

the Secretary, Mr. Mundella. Mr. Handel Booth spoke twelve times, and was thrice called to order by the Speaker.

ON June 11 a Deputation from the Teachers' Registration Council, to urge the abolition of the Acting Teachers' Examination, was received by the President of the Board of Education. The Chairman of the Council, Mr. Arthur Acland, and other speakers pointed out the anomaly that would arise when the permanent conditions of registration came into force, if teachers excluded from the Register were still recognized by the Board. If it were now announced that after December, 1918, this examination would cease, no hardship would arise. There would still be two years of grace during which intending teachers could qualify by training for admission to the Register. There are at present more places in training colleges than candidates, and several colleges are advertising vacancies for the coming session. The President, in reply, expressed his entire sympathy with the object of the Teachers' Registration Council to enforce training, but, in view of the present dearth of entrants to the profession, he did not see his way to fix any precise date for the termination of the Acting Teachers' Examination, and he threw out a suggestion that some alternative might be devised to the two years' course in a training college which would satisfy the Teachers' Registration Council. Whatever the Board may do, we hope that it will not be content with a vague announcement that at some proximate date the Examination for Acting Teachers will be discontinued. In the case of secondary teachers, a similar threat proved a *brutum fulmen*, and actually led to a falling off in the entrances to training colleges.

THE way of the Oxford reformer is hard. The proposal for the reform of Responsions at Oxford was defeated in Congregation by 110 votes to 73. This brings to a close a long discussion on a scheme which has never excited any great enthusiasm. The plan was to screw up the examination by requiring a candidate to pass in five subjects, four at least at a time, namely Latin, Greek, English composition, mathematics, and a fifth to be chosen from a list. The test was to be made rather harder, without any relief being offered to the Modern Side boy. An examination reformed on these lines might have kept out a few public-school "ne'er-do-weels," but would have done nothing to encourage the boys of the newer schools to come in. Just at the moment when the Oxford scheme was demolished, the Cambridge scheme appeared in print. This scheme, drawn up by a syndicate of seven distinguished dons, admits a modern language as an alternative to Greek, makes an essay and some other English work obligatory, divides the subjects required into three groups—Languages; Mathematics, Science; and English—and permits candidates to pass in each group separately.

WITH the greater part of the Head Mistresses' protest against some of the findings of the Royal Commission on the question of the employment of women in the Civil Service we are in complete sympathy. We can find no good reason why women should be forbidden to compete for Class I Clerkships; certainly none is given

by the Commission. Their argument that women who are fit for such posts will have already distinguished themselves at the University or elsewhere applies equally to men and women. The view expressed in the Report that women are less adaptable than men is certainly a strange one; most people hold the exactly opposite opinion. In power of sustained work and endurance of long hours women may be inferior, but any weakness in this direction is counterbalanced by their superior conscientiousness and care in minute detail. The proposal of the Commissioners to condemn female typists to a lifetime of type-writing is wholly bad. On the question whether retirement on marriage should be compulsory for women the Head Mistresses express no opinion.

ONE of the worst forms of "cram" of which we have ever heard is that encouraged by the Examination for Girl Sorters at the Post Office. The unfortunate candidates are examined in four subjects only—reading, writing, the first four rules in arithmetic, and the geography of the United Kingdom. They drop all other branches of education and devote their whole time and energy to acquiring extraordinary proficiency in these rudiments. To what condition their minds are reduced in the process it is beyond our power to imagine. The remedy suggested by the Commissioners is a leaving certificate. Let the candidate produce a certificate from her school showing that she has been properly educated up to, we suppose, a certain age. But there is a difficulty in the way of such a regulation. "The general educational system of the country is not yet sufficiently developed to allow of its immediate adoption," says the Report. In plainer English, our secondary schools are not yet so numerous nor so good that we can trust them to turn out an adequate number of decently educated clerks.

WE note with considerable satisfaction a statement made in a daily paper by the Secretary of the Association of University Women Teachers that a growing number of University women who take up teaching in secondary schools find it distasteful and give it up. Clearly the more thoroughly this weeding out process is done the better. In both boys' and girls' schools there are far too many teachers who are there only because they have not been able to get anywhere else. Such teachers depress the public estimate of education, lower the standard of the teaching, and help to keep down the rate of salaries. So many careers are now open to women that those who have no natural bent for teaching have no excuse for taking it up as a profession. We wish, however, that the sifting process could be performed earlier. The weeding out certainly ought to be done during the period of training, and possibly it will be so done when training is general or universal, if only training institutions can overcome their deep-seated reluctance to weed out anybody who can make shift to get through a lesson without actually causing a riot.

BUT possibly another consideration was present to the minds of the Commissioners. To require a leaving certificate, they may have thought, would be unjust to children who live in rural areas or small towns where there is no public secondary school. Such an injustice, however, we

feel sure would be purely temporary. If parents in Little Muggleton found that their children could not compete for posts in the Civil Service because there was no good secondary school which they could attend, Little Muggleton would soon ask for such a school. And in our opinion Little Muggleton ought to have a legal right to it. That is to say, if a certain number of parents in any locality demand a secondary school and pledge themselves to support it, that secondary school ought to be built. In this way the requirement of a school-leaving certificate would further the erection of secondary schools.

PROF. SPEARMAN, in the March number of the *Journal of Experimental Pedagogy*, has done something towards at least defining the problem of Formal Training. Most of our readers know what that problem is. Some people hold that a boy who can do Latin prose can do anything, others that his work at Latin prose will scarcely help him to write good English and certainly will not make the study of astronomy or the stock market any easier to him. The truth possibly lies somewhere between these two extremes. Prof. Spearman holds that "all training has an indefinitely wide range of effect, but it is like the illumination proceeding from a focus of light"—it gets weaker the farther you get from the centre. The problem then will be to discover over how wide an area any particular kind of training is effective. If a boy is taught to observe chemical experiments carefully, will he be the more capable of observing half-obliterated prehistoric earthworks? If a girl's memory is trained on history and geography, will she be the more likely to remember the addresses on her visiting list when she is married? Is there such a thing as a trained eye, or only such a thing as an eye trained for certain exercises; such a thing as a trained memory, or only such a thing as a memory trained in certain directions? It might throw some light on the first question to note whether boys and girls who are specializing in science observe more quickly and more accurately during a country walk than their schoolfellows with a literary turn.

THE time has surely come when Special Police Courts for Children should be established everywhere, and youthful offenders thus saved from the contamination of the Police Court. So far only one or two big towns have instituted such courts; there is none in London. A Children's Court would be exempt from the ponderous formalities of the ordinary tribunal; there would be no dock, and the magistrate would be more like a schoolmaster than a judge. The question of the most suitable punishment for petty offences and breaches of police regulations presents some difficulties. Imprisonment is out of the question; fines fall on the parent, and not on the child; and it is absurd to send a boy or girl to a reformatory for "bagging" a few apples or throwing stones in the street. At the risk of being thought quite out of date, we venture to suggest that for boys at least no more suitable chastisement than an old-fashioned whipping can be found. Only the small criminal must be made to smart. We have heard of cases in which the burly constable to whom the painful duty of flogging was entrusted was so afraid of doing serious damage that his blows produced nothing but a smile on the face of the culprit.

A Peculiar Form of "Gramming."

Formal Training.

Teachers without a Vocation.

Special Courts for Children.

If there is no Secondary School?

THE University of Sheffield, following the example of London, has decided to strike Latin out of the list of compulsory subjects for medical students. The change

**Medical
Latin.**

will seem startling to those who have always regarded some knowledge of Latin as necessary for a doctor, because he uses that language in writing his prescriptions. This view we believe to be founded on a fallacy. Medical Latin is not a language: it is merely a list of technical terms. These technical terms are assimilated by the student and their meaning made part of his mind by the connexion established between them and the things they represent and by his use of them, not by his observation of their origin. If we know the derivation of a word, we are always apt to think that such knowledge helps to a comprehension of its meaning, but in nine cases out of ten this is probably a delusion. Musicians who are ignorant of Italian understand the meaning of musical terms just as fully as those who know that language. The politicians in the working men's clubs apprehend the force of such words as "mandate," "constitutional," "veto," quite as well as the politicians in Pall Mall. The only advantage the man with a knowledge of Latin has is that the initial difficulty of grasping the meaning of Latin-derived words for which no base in English exists—such words we mean as "equine," "auditory," "visualize"—is reduced. This is a real, but not a very great, advantage.

BUT this advantage may be too dearly purchased, for teachers attach too much value to the discussion of technique in art and literature. Many masters and

**Technique
and Substance.**

mistresses find it difficult to know what to teach in literature, for instance. They used to fall back on philology; classical allusions, too, were a great stand-by; now they are inclined to fill up the vacant space with technique, the study of metre, of simile, and the minutiae of style. Certainly boys and girls ought to learn something of this, and the older they are the more they ought to learn, yet technique is, after all, a minor matter. The impression made by the book on the mind and heart is the important thing. What is said is infinitely more worthy of attention than the manner in which it is said. It was one of the weaknesses of the old classical education that it attached more importance to form and language than to substance. Let us hope that teachers of English will take care not to fall into the same pit.

THE accomplished writer in the *Schoolmaster* who signs himself "Y." has recently given a column of counsel to people who propose to buy pictures. His

**A Pedagogic View
of Art.**

advice may be judged from the following specimen. "Then you will look to see how many, and which, of the following characteristics of a good picture are present in the one under notice: invention, composition, disposition," and so on, fourteen points of technique being enumerated. With all due respect to "Y.," we shall do nothing of the sort when we next buy a picture. We shall rather look to see what revelation of beauty it contains, what feeling it expresses, what appeal it makes to the eye and the heart. If it satisfies us in these respects, we shall venture to buy it, even if it is weak in every one of "Y.'s" fourteen points. Even a horse is more than a list of good and bad points, much more a picture. We earnestly hope that this is not the way in which teachers

in elementary schools cultivate the appreciation of art in their pupils.

THE Special Report on School and Employment in the United States recently issued by the Board of Education contains much information which will be of

**School
and Employment.** interest to those who are studying the problem of education during adolescence.

The years from fourteen to sixteen constitute a special difficulty in America, for children leave school at fourteen, and they cannot obtain employment at any form of skilled labour till they are sixteen. Hence the need for Industrial schools where this interval can be utilized in the learning of a craft. These have been and are being established in some of the north-eastern States. A peculiar, though not, we think, quite unique, feature of American education are the "half-time schools," the pupils of which spend half their time in the workshop and the other half in school, studying subjects closely allied to their trade work. In day continuation schooling Ohio and Wisconsin appear to be leading the way; but such schooling is obligatory only for those children who have not completed the elementary school course satisfactorily. We note that American opinion is practically unanimous against evening continuation classes, and those started in New York State seem to be a failure. An interesting feature in the volume is the account of the school system of Gary, Indiana, a town of 30,000 inhabitants, built to order in six years by the Steel Trust. But we have no space even to note its most striking points.

SHOULD skipping be practised as a regular form of physical exercise in schools? The question is not quite so simple or so trivial as it looks. On the one

**Skipping and
Singing.**

hand, there can be no question that skipping is an excellent exercise, that it is easily learnt and greatly enjoyed, and would probably do at least as much good as the Board of Education's syllabus of arm and leg movements. On the other hand, it is probable that if skipping is made a school exercise it will cease to be a playground and street amusement. Schools have not yet solved the problem, and possibly never will solve the problem, of having it both ways, of making a thing at once a discipline inside the school and an amusement out of it. As soon as any pastime or hobby which is pursued by children freely and capriciously becomes regularized and systematized, it loses for them half its charm. It ceases to be the spontaneous outflow of their energies; it becomes something done to order, and what is done to order is not often done without orders. This may partially explain what has always struck us as curious—namely, the very small effect which forty years of instruction in singing in elementary schools has had upon singing as a social practice in Southern and Middle England. Do Englishmen sing for enjoyment any more than they did fifty years ago? The appreciation of music has no doubt increased and so has possibly the practice of instrumental music, but we doubt whether singing has advanced much.

MR. BIRRELL has introduced into the House of Commons a modest little Bill for the improvement of the position of assistant masters and mistresses

Irish Secondary Teachers.

in Irish secondary schools. The first provision is for the establishment of a Registration Council to frame and keep a Register not of all teachers, but of intermediate school teachers. We note that the words of the Bill are "The Lord-Lieutenant *may* constitute," but we do not imagine that the Irish teachers will have such a long struggle with the officials at Dublin over the meaning of the auxiliary verb as English teachers had with officials at Whitehall. Then a grant of £40,000, the first grant ever made for secondary education in Ireland, is to be ear-marked for the benefit of the lay teachers in the intermediate schools. The clerical teacher's position, said the Chief Secretary, is not urgently in need of improvement. Mr. Birrell also promised "fixity of tenure," which, however, turned out to mean merely that the teacher should have a right to three months' notice before dismissal. We should scarcely call this "fixity of tenure" in England. The provisions of the Bill, humble as they are, will no doubt make a beginning at improving the conditions of what Mr. Dillon called "one of the most deplorable professions which any educated man could take up in any country in the world."

IN the *Nineteenth Century* for June Mr. C. H. P. Mayo writes on the dullness of Sunday in the public schools. He reckons that for some six or eight hours a boy is left to his own resources, in addition to the two or three that he spends in his own house after lock-up. The remedies he proposes are (1) some form of compulsory military drill, (2) lectures on social problems—civics and the like, (3) meetings of debating societies. With the spirit of Mr. Mayo's reforms we heartily sympathize, but he seems to us greatly to exaggerate the gloom of a modern Sunday at school. It is a good thing that on one day in seven a boy should be left to his own devices, even if he does choose to loaf; and the better sort, who prepare their two Scripture lessons, write home, and go for the Sunday walk or ramble with the friend of their choice will not have many vacant hours over. From the first proposed remedy, moreover, we strongly dissent. It violates what should be a guiding principle of Sunday observance, that the day should differ from other days. No surer scheme for making Cadet Corps unpopular could be devised. At Winchester there are no Sunday lessons, and Sunday lectures have long been an institution at Clifton.

LOCAL AUTHORITIES.

THE hopes of the rate-payer for some immediate relief are not, it appears, likely to be realized, and some are inclined to suggest that, even if the provisions of the Finance Bill could be carried out, the relief would be illusory. That is to say, the rate-payer is not likely to benefit if a reduction in rates is associated with an increase in assessable values, and the Chancellor of the Exchequer implies that the price of relief is the adoption of a new basis of assessment. Urban areas anxious to extend their territories have been known to guarantee that the rates in the district to be "taken in" shall not be raised for a period of years. The inhabitants of the district congratulate themselves on the bargain until they find that the assessable value of their property is steadily improving. While there is little prospect of substantial relief to the burden of local expenditure, the teachers are pressing their claims upon the Authorities for higher salaries, and the Board of Education continues to fine the same authorities for conditions over which they have little control.

Relief of Rates.

THE present deficiency in the supply of teachers is a matter for which the Board of Education is chiefly responsible. The abolition of the old pupil-teacher system was entirely the Board's work, and the Local Authorities generally have laboured zealously, and spent freely, in the effort to make the Board's alternative policy a success. In doing so they are producing a type of teacher who is entitled to a higher rate of remuneration and so deliberately adding to their own difficulties. How does the Board recognize its responsibility for restricting the supply of teachers and reward the efforts of Local Authorities? By reducing the inadequate Government grant, if, for even a short period during the school year, the staff of a school is below the requirements of the Code.

THE fact that a Local Education Authority may have expended a quarter of a million in building new schools and have made a determined effort to overtake the neglect of the years previous to their responsibility is of no consequence to the Board. If the average attendance at a particular school exceeds the accommodation, the grant is reduced. Similarly, in the case of non-provided schools suddenly discovered to fall short of an Inspector's standard of structural efficiency. At a recent meeting of the Essex Education Committee it was reported that £20 had been deducted from the grant because the premises of a particular school were regarded as unsatisfactory. The Chairman said that the Elementary Education Committee took the strongest possible objection to this fine and proposed to resist it with all the power they could. All parties concerned with the county had done what they could and had spent a lot of time on the school. The result was that the Committee—or those whom they represented—were to be fined in respect of a school in which all the rate-payers' representatives had done their very best. It is to be regretted that the officials of the Board should imagine that it makes for administrative efficiency or educational progress to irritate Local Authorities with pin-pricks.

THE Lancashire Education Committee has received a report from one of its Sub-Committees on the new regulations of the Board for increasing the supply of elementary-school teachers, and record their opinion that the proposals would not materially increase the number. It is considered, also, that pupil-teachers trained under these regulations would be at a serious disadvantage compared with the ordinary pupil-teacher or bursar, and, further, unless they pass some final examination, accepted by the Board, within a given period, the Authority would not receive the final instalment of grant. As an alternative to the Board's proposals, the Committee has adopted a scheme applicable to the whole county. Bursars will be selected by examination from pupils in secondary schools at the age of fifteen instead of sixteen, and recognized as such for two years instead of one. In the first year of recognition a maintenance grant of £10, and in the second year £15, will be allowed. To meet the needs of children in rural areas an additional allowance of 10s. 6d. a week in lieu of travelling expenses will be made. It is further proposed that children between thirteen and fourteen, selected by examination, should be drafted from elementary to secondary schools, where they would remain for at least three years. They would receive free tuition, travelling expenses, an allowance of £1 for books, and a maintenance allowance of £5, £10, and £15 respectively in each year of attendance. As such pupils would not be able for the first two years to take their proper places with ordinary secondary-school pupils, it would be necessary to place them in special classes, and a few secondary schools will be selected where the experiment will be tried. The plan adopted by the Lancashire Committee appears to be an excellent one, and it will be interesting to hear of the results.

THE Education Committee for Kent, in their forty-sixth report, render an interesting account of the work done by twenty farm lads during a month's sojourn at a farm school. As a matter of fact, no farm was attached to the school, and for all practical work, such as thatching, hedge layering, draining, pruning, and the like, the institution was entirely dependent on the goodwill of the neighbouring farmers. No difficulty, however, was experienced in this direction, and the farmers gave every facility for carrying out whatever work was contemplated. The lads were carefully selected from different districts of the county, and the school was held during the month of January. The total hours of instruction received by each lad was thirty-eight hours of lecture work and ninety-eight hours of practical work. A consideration of the syllabus of subjects suggests the criticism, that too much was

Kent: Farm School.

attempted. The Principal of the School points out, however, that no subject can be fully learnt in a month, but that a lad can get a clear idea in the time of how a piece of work *should* be carried out, while he must get the ability to do it by constant practice afterwards. "By his introduction to a number of subjects which he has never touched before, the lad may—as several did—discover a latent taste for a certain kind of work which he never suspected before. Such a discovery is a valuable one, not only to the lad, but to his employer."

The Farmer's Duty. THE work done at this experimental residential Farm School may be regarded as the type of educational effort now favoured by the Board of Agriculture. It may be useful, but it ought not to be necessary. Farmers, like other employers of labour, secure the services of lads at low wages because the lads are supposed not only to work, but to learn the mysteries incidental to their occupation. Hedge layering, draining, thatching, wood cutting, care of farm implements, and the like are crafts which a lad ought to learn and practise on a properly conducted farm, not in a State-supported educational institution. If the success of the great agricultural industry in this country depends upon spending public money in teaching lads processes which they ought to be able to learn with efficiency on commercial farms, the agricultural industry must be in a very bad way.

Wiltshire. THE field manurial demonstrations, conducted under the direction of the County Secretary for Agricultural Education in Wiltshire, must be of considerable value to the farmers in that area. The demonstrations include trials under various conditions, and with numerous manurial combinations, to ascertain the best methods of cultivating meadow land mangolds, swedes, potatoes, wheat, and also sugar beet. The results are tabulated in a simple and at the same time complete form, full particulars being given of the precise conditions under which each demonstration was carried out. Consequently, any practical farmer with the report in his hand can understand the nature of the soil, the treatment to which it has been subjected, and the results of the experiment. This is unquestionably a work of the greatest educational and industrial importance, which must have a far-reaching influence.

SCIENCE NOTES.

Sheep-shearing and the Wool. "R. H.," in the *Morning Post*, referred to the L.C.C. Junior County Scholarship competition as the great annual sheep-shearing. Perhaps the term would be applied with equal correctness to the July examinations in our secondary schools. It is safe to predict that several thousand boys and girls will answer correctly questions on calorimetry and expansion by heat, and that quite as many will answer incorrectly questions on radiation; that in the chemistry answers there will be a fair knowledge of facts and much weakness in principles; that diagrams will be well drawn and numerous, and that descriptions of apparatus and experiments will be fairly full and accurate. Formulae and equations will be too much employed by beginners, who do not understand the basic laws which precede them. In attempts at logical reasoning inversions will be commonly met with, such as statements that certain flowers are alike because they belong to the same natural order. Problems on Archimedes' Principle will be worked correctly, but the Principle itself will be wrongly stated. Candidates in domestic science will fail to connect rules of healthy living and domestic management with the experimental work performed in the laboratory, even when they know the rules and have obviously been guided through a course of laboratory exercises.

Reform wanted in details. THE accuracy and certainty of the above prediction might give teachers furiously to think. The elimination of errors repeated by generations of pupils is probably a matter of reformed methods in presentation, especially in regard to details. The nearest approach to freedom from serious mistakes seems to be made in the schools where difficulties are examined with some thoroughness without fear of being above the heads of the children. However, we do not presume to dogmatize on the methods; our present object is to cause more heart-searching among science teachers. Then improvement will surely follow.

British Association in Australia. A STRONG program has been arranged for the Australian meeting of the British Association, and this is particularly marked as regards questions of science teaching. In Section L there will be addresses by Prof. Perry (President) and Prof. Armstrong (Vice-President), and a discussion on the place of science in the State and in education is expected to follow Prof. Armstrong's paper. Mr. Buckmaster will give a retrospect of the aid given in England to scientific education—alas! that it can only be a retrospect! Mr. Eggar will raise the question of the quality of school mathematics and science most suited to be part of a liberal education, and he will be followed by Mr. J. Saxton and Mr. H. P. Hansen, of Melbourne. Vocational education will be strongly represented by Dr. Kimmins, Prof. Findlay, Dr. Moody, Dr. Hall, and others. The teaching of botany and of domestic science will find advocates in Miss Clarke and Mrs. Meredith. The above constitutes about half the program; the other half is less directed to science, and is not less interesting. The speakers are to include Prof. Green, Prof. Hetschajeff (on Russian Experimental Pedagogics), Sir H. Reichel, Principal Story (Queensland), and Dr. Gray.

Children at Museums. MANY of our readers are interested in the endeavours to enhance the educational utility of museums, so we may call attention to the article in the May number of the *Museums Journal* by Mr. W. R. Butterfield, in which he makes suggestions for special rooms for children.

The coming Solar Eclipse. IT is often assumed that little information is to be gained by observations of a partial eclipse, or of partial phases preceding and following totality. In a paper presented to the Royal Astronomical Society in 1912 Prof. Fowler gave an account of most interesting and valuable observations of the "flash" spectrum extending over nearly an hour. Briefly, the method consists in using a slit set radially so as to follow the point of the cusp, or rather just within the region where the moon occults the photosphere, but does not occult the chromosphere and prominences. Under these conditions the reversing layer can be well examined, especially while the phase exceeds 0.5. We shall endeavour to follow the phenomenon, and hope some of our readers will be able to do so. Some practice with a prominence spectroscope, used in conjunction with a Barlow lens, is required. Messrs. Hilger supply a prominence spectroscope for £5; but it is advisable to have the instrument modified so as to permit ready observation of the whole visual spectrum. Many direct vision spectroscopes of high dispersion could be adapted for the purpose without interfering with their use for other purposes.

JOTTINGS.

THE Montessori Society has arranged a Conference at East Runton from July 25 to 28. There will be lectures, discussions, and daily classes of children; also an exhibition of Montessori garments and apparatus. Those desiring accommodation in camp should apply to the Secretary, 12 Montagu Street, W.

CONFERENCE OF TEACHERS OF ENGLISH AT STRATFORD-ON-AVON.—Arrangements are now complete for this Conference, which opens on August 1st, and the program is singularly attractive. Monday—Address by the President, Sir Sidney Lee; and papers on the Study of Shakespeare in Schools, by Mr. J. H. Fowler, of Clifton College, and Miss McCroben. Tuesday—"The Study of Poetry": papers by Mr. Lascelles Abercrombie, Prof. Clark, and Mr. John Drinkwater. Wednesday—"Co-ordinative Speech-training," by Miss Elsie Fogarty; "Use of Phonetics in Teaching the Mother Tongue," by Mr. Daniel Jones. Thursday—"Oral Composition," Dr. Rouse. Friday—"Acting in Schools," Miss Amice Macdonell and Mrs. Percy Dearmer. During the week Mr. Benson will give a sequence of the three historical plays, "Richard II," "Henry IV" (Part II), and "Henry V," also a performance of the entire text of "Hamlet." Applications for membership having far exceeded the accommodation of the Grammar School, the Committee have arranged for a second week, from August 8 to 15. Conditions are the same as for the first Conference, and applications should be made at once to Hon. Secretary, Conference of Teachers of English, Theatre Box Office, Stratford-on-Avon.

THE Royal Society of Edinburgh has arranged for the Napier Tercentenary Celebration in Edinburgh from July 24 to 27, to be followed by a Mathematical Colloquium from the 28th to the 31st. On the 24th Lord Moulton will deliver the Presidential Address. There will be an exhibition of calculating machines, &c., connected with Napier. Those desiring to become members and attend should apply to C. G. Knott, Esq., 22 George Street, Edinburgh.

AT King's College, Strand, an Exhibition illustrative of modern methods of History Teaching will be held in connexion with the Conversazione on July 1, and the Exhibition will be open to the public on the three following days: on Thursday, 5-8 p.m.; on Friday, 5-8 p.m., and on Saturday, 10 a.m. to 1 p.m. Addresses on various aspects of history teaching will be delivered by Prof. Adamson, Prof. Hearnshaw, Mr. A. P. Newton, and Mr. A. A. Cook.

A COURSE of lectures on Town Planning will be held at University College, Gower Street, during the first fortnight of August, in connexion with the London School of Architecture, and officially conducted visits will be paid to Letchworth, the Hampstead Garden Suburb, and other suitable sites in the neighbourhood of London. For information, &c., apply to Mr. J. S. Rathbone, Fitzalan House, Church End, Finchley, N.

THE Munich Holiday Course for Teachers will be held this year from July 15 to 28. Dr. Kerschensteiner will deliver a course of eight lectures on "The Scientific Principles of Teaching." Teachers wishing to join should send name and address to Hon. T. Bund, 8 Pfarrhofstrasse, Munich, who will give information as to lodgings.

"Convince a man against his will."

He replied with a half-suppressed d—n,
"Your argument proves that I am
A creature that moves
In determinate grooves,
In fact not a 'bus, but a tram."

"IN most of our schools the higher class spends at least a couple of hours a week discussing the important events of the week." So reports Mr. Morley Dainow in the *Bioscope*. It is strange that these two hours do not figure in any time-table with which we are acquainted. Nor can we see how the cinematograph could serve to visualize and bring home the events of the week. Would a week suffice to prepare films of the launch of the "Aquitania" or the visit of the King of Denmark, to take two of his instances?

A LADY of culture, with capital, advertises in the *Morning Post* desiring the purchase of a High-class Laundry, Ladies' Club, Boarding House, or High-class Finishing Boarding School for Girls.

THE Executive Committee of the Women's Industrial Council at its last meeting passed resolutions approving, as a preliminary measure, the provisions of the Children's Employment and School Attendance Bill, but urging that the clause respecting attendance at Continuation Schools for children under sixteen should be compulsory, and not permissive at the discretion of the Local Authority, and that continuation classes should be held during the daytime.

A SUMMER Course for Junior Form Mistresses at Cherwell Hall, Oxford, from August 3 to 15, has been arranged by the Council. Particulars will be found in our advertisement columns.

MESSRS. KELWAY & SON, of Langport, Somerset, has received from the United States Government an order for flower and vegetable seeds amounting in weight to 44 tons. These seeds are purchased for gratuitous distribution, and do not include agricultural seeds or large seeds, such as peas and beans.

THE *Schoolmaster* (June 13) has an article on "Latin Macaronics." The four *malo's* is taken as a typical specimen, and for the sake of the ignorant each *malo* is parsed: thus, "*malo*, -i (noun, *masc.*, 2nd decl.), an apple tree," (the italics are ours). It may be "perfectly good Latin," but it is not a macaronic. "*Trumpeter unus erat qui coatum whitum habebat*" is a true macaronic. We are further informed that O.V.S. was the usual Roman form of the last farewell salutation. We are all fallible, and in a recent *Westminster Gazette*

prize version, signed "E. D. S.," and commended by the editor for its fidelity, *patebor* occurs as the future of *puli*.

WE are asked to remind teachers of the Froebel Society's Summer School for Teachers of Young Children, at Broadstairs, from August 1 to 22. Last year many late applications had to be refused.

SIR LAUDER BRUNTON has expressed the opinion that there should be games masters at the public schools, perhaps "old blues," who should be paid at the same rate as classical masters and take equal rank with them. The only improvement on this that we can suggest is that the possession of a "blue," with honours in boxing, swimming, and gymnastics, or at least two of them, should be an indispensable qualification for a head mastership. Why should a matter of such supreme importance as athletics be left entirely to assistant masters?

THE exchange of teachers between different parts of the empire goes forward. Canada takes a leading part in the movement, as is natural, seeing that geographically she is the centre of the Empire. Manitoba, and Canterbury, New Zealand, have been exchanging teachers. The London Education Committee has just given its sanction to a scheme for temporary exchanges between London and the Dominions.

THE Welsh Board of Education has issued a favourable report of the Aberystwyth Summer School for 1913. The numbers have grown from 81 in 1909 to 146. Geography was the most popular subject; next to this "Pedagogy of Handwork."

THE Nursery Training School held a Drawing Room Meeting at 1 Prince's Gardens, on June 23, to appeal for funds to extend their work. The school was opened in 1911 by the Women's Industrial Council, and already twenty-eight students have completed their year's course of theoretical and practical training. It is proposed to build a properly adapted house near Hampstead Heath.

WHY cannot the great boarding schools turn out mathematicians? Out of thirty-eight men placed in Class I of the Cambridge Mathematical Tripos, one hailed from Marlborough, some from Rossall, all the rest from day schools. Out of forty-two men who gained a First Class in the Natural Sciences Tripos, six or seven came from the big boarding schools.

ENGLAND possesses the most remarkable set of records of economic and social history in the world, but a comparatively small portion of them has been published. With this object in view the British Academy has appointed a Committee, consisting of Viscount Bryce (President of the Academy), Prof. Gollancz (Secretary), and other members, with Prof. Paul Vinogradoff as Director of Publications. A grant in aid has been voted by Parliament towards the expenses of the publication of the series, which will be entitled "Records of the Social and Economic History of England and Wales," and the first volume, "Survey of the Honour of Denbigh, 1334," edited by Prof. Vinogradoff and Mr. Frank Morgan, will appear shortly. The series will bear the imprint of Mr. Humphrey Milford, Publisher to the British Academy, and it is proposed, as far as possible, to bring out three volumes every two years. The "Black Book of St. Augustine, Canterbury," will probably be the second work to be published.

THE Senate of the University of London, informed that the Government declined to vacate Somerset House in their favour, passed in effect the resolution, *Mh kivei Kamapavav*. Until H.M. Treasury are willing "to provide accommodation more suitable in situation, more convenient in character, and on terms not less advantageous as regards tenure" than those of their present tenure, they decline to move in the matter of site.

THE Council of the Teachers' Guild have virtually concluded negotiations for the lease of two adjoining houses, in a favourable situation close to the Russell Square Tube Station. They hope to have completed the necessary alterations and to be in occupation of their new premises by next October. There will be room enough to house the new Society of Education, and also for a Teachers' Guild Club, with dining, sitting, writing, and smoking rooms, and eleven bedrooms.

THE Council of the Froebel Society has appointed as Secretary to the Society Miss L. C. Courtenay, formerly Head Mistress of the Dover High School (G.P.D.S.T.) and occasional Inspector for the Board of Education.

CLASS OR STANDARD?

A PROBLEM OF ELEMENTARY EDUCATION.

By F. HERBERT TOYNE.

JUST as in many districts the old term "Board School" has lingered on long after the School Boards ceased to exist, so the word "standard" has won for itself an acceptance which is likely to continue long after the ideas which were at the base of it have passed from our educational system. It has now for years been a scholastic commonplace that organization by standards should give way to organization by class, but though lip service is thus done to the abolition of standards, the old conception, and even the old word, still continues in vogue. It still, for instance, figures in the Code, and many a head teacher who has been persuaded by H.M. Inspectors to abandon the organization by standards is required by the Board of Education to show that certain children are in certain standards. Thus, for the purpose of exemption from school attendance, the attainment of standard six or seven is insisted upon. It is obvious, however, that no reform is effected if we merely change the word "standard" to "class" and continue to act as if nothing had been done, nor is anything gained if we merely number the classes from the top to the bottom, instead of from the bottom to the top, without any alteration in the principles governing the promotion and classification of pupils. It is hoped to show that one of the most important reforms which await those responsible for elementary education is the substitution of the class idea for the standard idea; or, in other words, the application to the elementary school of the principles which, generally speaking, govern promotion in secondary schools. There may be some who consider that such a change is merely administrative, and the discussion which took place in London during 1911-12 on double promotions was largely based on administrative considerations; but the difference is fundamental and vital.

There are two meanings which have attached in common parlance to the word "standard": (1) a common denominator or standard of comparison between different schools—e.g. "to have reached the seventh standard," just as we talk in public schools of a boy getting into the sixth—and (2) the idea of a year's work of a given quality for each pupil of a given age. It is against the second of these meanings that the present movement is directed. The first is common to either system of classification. It is necessary to have at least some conception of what the object of the school career is to be and of the kind of efficiency which we seek to impress upon the finished product of our schools. This standard of efficiency must not be one but many; it must be different for different cases, because of the fundamental differences between children. One child is so constituted as to be fitted for a literary, another for a manual, and a third for a scientific education. These should be the first principles governing our systems of promotion and classification of children.

The standard which we wish to abolish is that based on the principle of the year's work—practically all the children moving up one form a year, and attaining a rigid preconceived standard, whatever their capabilities. That is the principle that still maintains a firm hold over the vast majority of our elementary schools, though the number of children who are exceptionally treated is every year increasing. It is a relic of the days of payment by results when a rigidly defined series of tests was actually imposed on the schools, standard by standard, as a condition of earning grants. Fortunately, thanks chiefly to the protests of teachers, this system has vanished, but its evil influence still lingers on, and the cramping effect on the organization can hardly be over-estimated. The principle works as follows:—You start with a notion of what is the suitable work for, say, Standard

x; you then proceed, where the system is worked at its best, to find that children are fitted for that work, and, where it is at its worst, to find the children of the age which you consider fitted for that work. Having done that you then find rooms for them, with the result that we often have in the same school many rooms overcrowded and others half empty, to the serious detriment of teachers and children alike. It should be noticed in passing that there is generally, under this system, a wide gap between the work of one standard and the next.

Let us now take the alternative method. You have, let us say, a school consisting of rooms accommodating 60, 60, 54, 54, 50, 50, though one hopes that the era of classes of this size is passing away. You then take, beginning either at the top or at the bottom, your 50, 54, or 60 children according to attainment, and assign them to a particular room, and proceed until the children are assigned to the various classes. Having then your class x consisting of Tommy, Johnny, &c., you proceed to find what is the suitable curriculum for these particular children who are to be taught by a particular teacher, also with definite qualifications and limitations. In other words, as in the case of man and the Sabbath, the curriculum is made to suit the children, not the children to suit the curriculum. We have supposed the case which is most in favour of the old system—i.e. the school where there are six or seven rooms corresponding to the seven conventional standards—but the standard method becomes ridiculous in small schools of four rooms or less, where the children are actually classified into standards which then have to be grouped together. Instances must occur to everyone familiar with this class of school, where the adherence to the standard idea has created for the teacher totally unnecessary and almost overwhelming difficulties of organization.

There are three grave defects of the old system—psychological, educational, and administrative. The first of these consists in the assumption that the children are mere units fashioned in one mould. The logical basis of this assumption is such that it requires only to be stated to be seen to be absurd. It is impossible, for instance, to believe that a given fifty children coming from the infants' school to the senior department are even approximately of equal ability. The second defect is the assumption that the advance of children is equal year by year. It will be seen that one of the defects of the old system was this tendency to classify by age, and even now you will find instances of Inspectors urging what is essentially an age classification and complaining that children are not promoted quickly enough from the infants' department, not on account of attainment but because they have reached a given year of their life. Partial exceptions must still be made to prevent a very old child from remaining with others much younger, but such cases form the exceptions that prove the rule, and will largely disappear when we have introduced into our schools a more varied curriculum to suit the particular aptitudes of our diverse human material. It is encouraging to note in this connexion that at the 1913 Conference of the National Union of Teachers, in a resolution calling attention to the way in which many Education Authorities are evading the spirit of Article 14 of the Code by demanding the promotion of pupils regardless of educational attainments, the words were added, "especially by premature promotion from infants' schools." There can never be real freedom to teachers to provide for the varying requirements of their different departments until children are classified according to the needs of the individual school and of the individual scholar, and not according to a uniform abstract ideal.

As a corollary of this change promotions will be possible at more frequent periods than yearly—viz. at the half-year or at the end of each term. It is obvious from the point on which we have insisted—viz., the divergence between the abilities of one pupil and another that different children do not require the same period of time to go through a particular course and to be fit to be moved up into the next class. Beside such considerations adminis-

trative questions appear of small moment, but there is no doubt that the proposed change would remove a great number of the difficulties connected with the staffing of schools, would secure the best use of the accommodation, and prevent in particular schools a great wastage of the effective teaching power which now occurs.

Objections are from time to time raised against this system of classification and promotion from various points of view. The four main ones are—(1) that the means of comparison between different schools is lacking and that this involves certain administrative difficulties; (2) that owing to the constant promotions the children in a given class will be of very varying attainments, and that a bright child in his passage through the school may omit certain fundamental rules and exercises, especially in arithmetic; (3) that additional labour would be thrown on teachers already overweighted by large classes, and by the increase in clerical work; and (4) that Education Authorities have attempted to use, or might in the future use, this classification as a device to avoid providing accommodation.

(1) It may be harder for an Inspector to appraise the work of a head teacher, but the true test of a school's efficiency is the finished product which is turned out. The solution would seem to lie in permitting the utmost freedom to a head teacher to organize within his own school, provided that the aims in view are achieved when the child leaves school. To this aspect of the question the change in the current idea of an Inspector's functions from those of a critic—and generally an unfavourable critic—to those of a sympathetic advisor, corresponds. Other administrative difficulties caused by the removal of a common denominator at various points in each school can easily be dealt with. In regard to such routine matters as the supply of additional requisitions to the higher standards, admission to special subjects, such as domestic economy and handicraft, or to sit for scholarships—all these might easily be regulated by an age qualification, while the exemption from attendance should be granted on the lines laid down in the Bill at present before Parliament, and based not only on the age of the child but also on the beneficial character of the employments.

(2) The second objection is by far the most serious, being based largely upon educational considerations. It may be frankly admitted that in many instances the change from the old to the new system must be accompanied by some temporary inconvenience. No doubt in the transition stage some classes would be of a very composite and heterogeneous nature, but this would be the result not so much of the change as of the former rigid conditions obtaining, whereby it was presupposed that there was a gap between the top boy of one standard and the bottom boy of the next, essentially different from that between two boys in the same standard. The new system, especially if there were constant promotions, would remove wide gaps and make a succession of narrow ones. Every practical teacher knows that a given number of children cannot be divided up into seven homogeneous bundles, each bundle being differentiated by clearly marked gradations. At present this difficulty of composite classes is a very real one, but if anything, the proposed change would tend to diminish it. While it exists the only possible remedy is by giving special attention to the more backward pupils. There is, however, a device by which this particular difficulty can be greatly lessened. Without entering upon the vexed question of formal training, it is generally recognized in practice that the relative attainments of children, as well as of adults, are widely different in different subjects. The aptitude for the ordinary English subjects is quite distinct from the aptitude for languages, and again from the aptitude for mathematics. Aptitudes for history and geography might be similarly differentiated; but these main divisions will be sufficient for our purpose. In our secondary and public schools the pupil is usually graded on one group of subjects, e.g. the classics. The classification thus arrived at is abandoned in the case of modern languages and mathematics, and the pupils are rearranged in sets for these

subjects irrespective of the forms in which they are placed. As a matter of convenience this reclassification by sets is generally taken within certain well marked divisions, such as the upper, middle, and lower schools. It is contended that if a similar plan were adopted in the elementary schools many of the teacher's most obstinate difficulties would be surmounted. Only those who have taught the large classes of an elementary school can realize the magnitude of the task of attempting to adopt a classification based on all subjects. Many endeavour to meet it by grading frankly on arithmetic alone and letting the other subjects take their chance, and indeed so radical are the difficulties of teaching arithmetic to pupils in different stages that this course is often the only one possible. At the same time it cannot be educationally justified if there are any means of avoiding it. These means can be found in the adoption of either English subjects or mathematics for the first classification, with a reclassification into sets for the other, and this is already in force in a very great number of schools.

(3) The third objection, that there would be an addition of labour, must be admitted to a certain extent, both in planning the time-table to allow for these double classifications, and in view of the more frequent promotions, but it must be remembered that with the double classification suggested the promotion from one form to the next would not necessarily carry with it promotion from one set to another in the special subjects. Moreover, other difficulties of organizing and fitting children into a preconceived standard would be removed and the relief afforded by abandoning the rigid classification would more than compensate any initial increase of labour.

(4) The fourth objection may possibly be well founded in certain instances. It may be true that under the pressure of the growing burden of the rates some members of the Education Authorities may support such proposals with a view to a saving of accommodation. If, however, this be the case it would surely be advisable to resist the evils which might be found to occur, and not to oppose a change which is otherwise good.

To sum up, the methods of classification which we have outlined are not new in themselves, but are rather an adaptation of what is in force in the secondary schools. When the teachers of elementary schools are urged to adopt some such classification—and especially the division into sets—they not unnaturally raise the objection that though the proposals may be advantageous in secondary schools they are impossible with the larger classes existing in the elementary schools. Indeed, like many other educational reforms, this one leads direct up to the brick wall of the present enormous classes. These considerations show that there can be no more important demand on any new grants which the Government may be prepared to allot to Local Education Authorities than a reduction in the size of classes in elementary schools.

COLONIAL AND FOREIGN NOTES.

GERMANY.

Suffering humanity flies to many medicines, and children suffer under remedies as well as ailments. **Linkskultur.** Abnormal children were trained in right-handed methods; train the left hand, said science, and your child will grow normal. But *Linkskultur*, tested in the Berlin Auxiliary Schools (*Hilfsschulen*) for children of less than average mental gifts, has proved a failure and will probably be abandoned—to the great relief of the children. But the experiments are of interest, if only from the scale on which they were conducted; for they were made upon 2,600 children in 146 classes. The reports

THE SCHOOL ALGEBRA

A COMPLETE SCHOOL COURSE ON MODERN LINES
INCLUDING GRADIENTS OF GRAPHS, LOGARITHMS,
AND THE BINOMIAL THEOREM FOR POSITIVE INDICES

BY

A. G. CRACKNELL, M.A., B.Sc., F.C.P.,

Late Scholar of Sidney Sussex College, Cambridge; Author of "Practical Mathematics,"
Joint Author of "Geometry, Theoretical and Practical," &c.

SPECIAL FEATURES.

Object.—This book is published in response to a widespread demand among teachers and others interested in Mathematics for an elementary Algebra fully abreast of modern ideals and embodying the advances made in recent years in the methods of teaching the subject.

The author has made a special endeavour to give the pupils a thorough grasp of first principles, and at the same time the necessary mastery of mechanical rules. These two ideals are to some extent antagonistic, and it is only by reconciling their conflicting claims that good work can be done.

Range.—The book provides an elementary course of Algebra as far as the binomial theorem for positive integral indices, and includes a full treatment of those subjects which are especially characteristic of modern teaching—such as symbolical expression, the construction and use of formulae, the algebraic laws and their applications, graphs, the meaning and use of negative quantities, logarithms, variation, and the gradients of graphs.

Graphs.—The value of graphs as an element in algebraic training has been neither overlooked nor exaggerated. Graphical methods are employed for solution of equations and determination of maxima and minima, while special attention has been given to their use in representing the variation of a function, and to the interpretation of gradients.

Introductory Course.—The book commences with a course of simple problems and equations which gradually introduce the easier algebraic processes and accustom the learner to the use of abstract symbols. This course ends with a chapter on formulae treated as concise statements of arithmetical rules, with suitable exercises in the numerical valuation of formulae.

Explanations of Rules.—The more important rules are introduced by formal explanations of typical cases which should be regarded in much the same light, and studied with much the same care and thoroughness, as book-work in Geometry. Without some such plan the learner will readily forget the principles involved in the various rules, however well he may have understood them in the first instance.

Standard.—The standard of this book renders it suitable for general use in schools, and it will be found well fitted for all examinations of the "school-leaving" type, such as the Oxford and Cambridge Schools' Certificate, the Oxford and Cambridge Senior Local Examinations, and the Scotch Leaving Certificate. Every endeavour has been made to provide the broad-minded treatment of the subject which is now required by all good examiners.

A Detailed Prospectus of the book may be had post free on application.

University Tutorial Press Ltd., High St., New Oxford St., London, W.C.

on the effects of training the left hand in drawing and manual work are not wholly unfavourable. They are unanimous, however, in condemning the use of it for writing; when it was employed, copybooks were dirtied, spelling suffered, and the handwriting became *greculiche Schmiererei*, a dreadful scrawl. That intellectual development has been promoted by *Linkskultur* it cannot, say the German medical authorities, be contended; and in an abnormal child who, maiming the right hand, had to use the left only, not the smallest strengthening of mind was apparent. Man is one-sided, and not two-sided, and if ambidexterity be harmless, or even serviceable to adults, to cultivate it in a child is to injure him and not to help him. Such is the latest, but not necessarily the last, word of German science; for the progress of man is not in a straight line, but deviously, and with some retracing of steps. In the figure of Jean Paul: "How often has not the ill-set arm of humanity to be broken afresh so as to be rightly healed."

And with what small things German science concerns itself! In Bavaria, as the *Pädagogische Zeitung* reports, a Ministerial Decree has been issued prescribing the number of lines on every page of an exercise-book or exercise-paper used in the higher school, the distance of the lines apart, the width of the margin, and the colour of the lines. The red line that has hitherto marked the limit of the cross lines is to be abolished in favour of a blue line. We have before us, as we write, exercise-books that were used in Prussia thirty years ago—twenty pale-blue lines to the page, and a double red line terminating them an inch and a half from either edge of the open book. Not by chance this—it was all studied to spare the children's eyes.

In every part of the world men at last begin to realize that education must be paid for like any other commodity, and that you cannot starve your teacher's body without also starving his pupil's mind. German primary teachers are steadily urging their claims to a just wage. With what success? Baden will improve the teachers' pensions. Sachsen-Weimar has adopted an increased rate of payment that will cost the State Treasury an additional 247,000 Mk. a year, and that although salaries were increased so recently as 1912. The town of Wandsbeck will pay (should Government approve) to head masters of primary schools a maximum of 5,390 Mk., to ordinary teachers 4,490 Mk., and for technical assistant women teachers 2,820 Mk. What percentage of primary teachers in England can hope to reach a salary of £225, that which the little town that gave its name to the "Wandsbecker Bote" proposes? On April 1 Hessen saw its new *Lehrerbesoldungsgesetz* in force, the scale of payments being as follows: from 1st to third year of service, 1,450 Mk.; 4th to 6th, 1,550; 7th to 9th, 1,750; 10th to 12th, 1,900; 13th to 15th, 2,100; 16th to 18th, 2,300; 19th to 21st, 2,500; 22nd to 24th, 2,800; 25th to 27th, 3,000; 28th to 30th, 3,300; 31st, 3,600. To these salaries must be added 500 Mk. as an allowance for rent. Hence, after thirty years' service the Hessian primary teacher will receive annually 4,100 Mk.—that is, £205—a poor enough, a quite inadequate wage, but again we ask, are there not many English teachers worse off? And the Hessian teacher is entitled to pension on a liberal scale, whilst, should he die, 35 per cent. of the pension falls to his widow. Hessen has not satisfied its teachers, but it has recognized that, if children are to be taught, the teacher must be paid. Rich England could pay the double of these salaries.

In *Hochschul-Nachrichten* (xxiv, 7) is contained an account of an Exhibition, called "Der Student," at the Leipzig International Booksellers' Exhibition, now open. This *Sonderausstellung*, or Exhibition within an Exhibition, will give, for the first time, a comprehensive picture of student life from the days of *fahrende Schüler* (journeying scholars), *Bursen* (bursars), and *Landsmannschaften* (clubs with a local tie) to our modern age of University Extension and Education by Cheap Trips. The historical development of Universities will be illustrated, as also the growth of the students' clubs, once of political and still of much social influence. How the student dresses and has dressed, his colours, weapons, and *Kommersbücher* (books of drinking songs)—all will be shown, whilst busts of famous students (Goethe, Bismarck, Hauff, Viktor von Scheffel, Emanuel Geibel) are to adorn the scene. Several institutions will have exhibits of a special character; thus the Bergakademie of Freiberg i. Sa. will represent the room and mineralogical collection of a student of mining. The German student is not as the English: he takes less exercise and he drinks—how shall we put it delicately?—less tea. But he is a gallant and a light-hearted fellow, ripening, for the most part, into a good Civil Servant or a capable investigator; and with his clubs, which go back to the "Nations" of Paris and Bologna, he forms a chapter in history to read which were worth the journey to Leipzig.

FRANCE.

It is not for us to discuss here, in a paragraph, the proper age for admission to the University. But if we got for England—as, for all the faint-heartedness in the North, we ultimately shall get—obligatory continuation or attendance of a secondary school up to the age of seventeen, matriculation at sixteen would become an anachronism. Without regret we observe a tendency in France rather to lower than to raise the age for the *baccalauréat*. The decree of 19th June, 1880, laid down that no one might present himself for it unless he had completed the sixteenth year of life, or special dispensation had been granted to him. A circular, dated 3rd April, 1893, fixed the conditions of dispensation: it could be solicited if on the first day of the month (July or, say, November) in which the examination was held the defect of the actual age of the candidate from sixteen was not more than one year. The effect of this rule was to keep some promising and industrious pupils, who unable to get a dispensation for July, had to sit in November, at work during the long holidays. A new circular states that age-dispensations for the July examination may be exceptionally granted, upon the recommendation of the Comité consultatif de l'enseignement public, to those who will complete their fifteenth year by, at latest, 1st November following. It is true that dispensation may be asked only for candidates of more than average merit. The fact remains that the *baccalauréat* examination may now be taken sometimes at an age below fifteen.

In the spring Amédée Gasquet, Director of Primary Instruction, fell ill and had to lay down his duties, never to resume them. His career was unusually brilliant. After leaving the *Ecole Normale* he served successively in the *lycées* of Moulins, Pau, and Clermont-Ferrand, his native town, where he was Professor of History. Appointed *Recteur* of Nancy, he did much to promote the development of the University. As Director of Primary Instruction he worked most conspicuously in the pedagogic reorganization of the *Ecoles Normales* and of the higher primary schools. France lost in him a learned historian and an able administrator.

UNITED STATES.

How vocational guidance was given last year at Abilene, Kansas, you may learn from a short letter to the *School Review* (xxii, 5). Better than teachers with vague ideas of several vocations would be, it was thought, men having each a direct and intimate knowledge of one. Seven trades—let us get rid of contempt for any form of social service and accept "trade" as simply a mode of wage-earning—were chosen by the authorities of the high school for presentment to the boys, namely, law, banking, medicine, insurance, mercantile business, newspaper work, and schoolmastering, and to present each a man of character and successful experience was selected. The boys jumped at the chance of instruction by real "business men." The "business men" took an interest in talking to the young. Each for his own trade explained what disposition, habits, and training were required by it, what prospects of advancement and remuneration it afforded, and in what ways it served the community. The meetings at which this was done took place of a Friday evening in the school chapel, and when for forty minutes the speaker had addressed the boys, they probed him with their penetrative questions. A similar plan was adopted with the girls, and proved acceptable to them. Now, who will be the first English head master brave enough to borrow from Kansas, and offer to his pupils vocational guidance from those who have trodden the paths of which they discourse? Lord Haldane discoursing at Eton on the promise of Law were a welcome novelty.

Let no young teacher suppose that we would condone carelessness in the correction of papers. Yet we make bold to say that in the history of mankind as much red ink as blood has been shed in vain. The essays of school children are not literary compositions; it is idle to estimate them as if they were, nor can the correcting pen convey to the writers a sense of coherence and style. Again, it is too late to impart matter by means of marginal notes on the written scroll, and it is the lack of matter, as much as imperfection of form, that makes the school essay a thing of terror. Have some hints from the United States upon the teaching of composition any value for our readers? (i) Choose a subject, dictate some statements of relevant facts, and then let the form debate it. The *Western School Journal* (xxx, 6) proposes the following subjects (having something of freshness) for debate in America:—"That the North Temperate Zone has more desirable conditions for life than the South Temperate Zone: that

London: HUMPHREY MILFORD, Oxford University Press, Amen Corner, E.C.

Sweden, Norway, and Denmark should form a union; that the permanent retention of the Philippine Islands is desirable; that the President of the United States should be elected by direct vote of the people; that voting machines should be adopted in all cities; that United States Consuls should be appointed under the merit system; that all postmasters should be elected by the people on non-partisan tickets; that there should be a great canal from Chicago to the Gulf of Mexico." The children, having got matter to work with, are now ready to compose. (ii) Lay stress upon *oral* composition. The Illinois Association of Teachers of English, after careful experiments, recommends for the high school that in the first year two-thirds of the themes should be oral, in the second year one-half, and in the two following years one-third. (iii) Even in the case of written compositions do not ignore the effect of *oral* correction. Says a writer: "It behoves us to remember that language, in its essence, is something spoken, and that speech lies closer to the personality we wish to correct than does writing. Hence the need of having the student read many of his exercises aloud, so that he may acquire the habit of uttering premeditated truth, may receive correction by word of mouth, and may reform with the living voice the thoughts and phrases that he has written."

Education in general is a centre of public interest in an unusual degree at the present time. What are the schools doing? How, in education, do the books balance?

Surveys.

These are the questions that are being put in all parts of the United States. To answer them "Surveys" are being made, of which we give a few examples, taken at random. The Vermont Survey was due to the Carnegie Foundation. The Ohio Survey is reported to have achieved much, and to have been cheaply and promptly carried out. At Leavensworth, Kansas, the Survey was initiated by the teachers, and in Illinois thirty thousand teachers will survey themselves. In fine, America is boldly active. We must not say that our English Board of Education is inactive; yet we venture to dedicate to it our end American note, as likely to prove to it a stimulus and a source of inspiration.

So vigorous has been the growth of agricultural clubs among country boys and girls in the United States—we are using as an authority the *Popular Educator* (xxx, 9)—that at the end of June 1913 there were sixty thousand club members raising crops under instructions supplied by the Department of Agriculture. Educative Corn Clubs originated among the boys of the South, who studied in winter the pamphlets of the Department, and then cultivated profitably each his acre of land. Not to be outdone, the girls of the South grouped themselves in educative Tomato Clubs, and for them, too, the Department had guidance, instructing them how to grow and to can—or, as we say, to tin—the vegetables. Not a fad this tomato-growing, but real and money-making work! From a plot one-tenth of an acre in area a girl raised 5,928 lb. of tomatoes; another is paying her way through a State Normal School with the proceeds of her canning; and for many girls tomatoes bring in a hundred dollars a year. Mrs. Turner, of Geauga County, Ohio, resolved to introduce the Tomato Club into the North. The Department of Agriculture, ever ready to help, sent her the results of experience in the South. The spring of 1913 "found a veritable orgy of tomato-planting in Geauga County." What girl would not join a club which offered, in addition to agriculture, merry luncheons and May-pole dances, as well as prizes for song-writing and for the composition of appropriate "yells"? But the greatest rewards were for the best results in tomatoes. The exhibits were judged in November, and each of four girls received a valuable prize in the form of a free excursion to Washington. Of other awards we will tell in the words of the American journal: "In addition to the trips to Washington, a registered Holstein calf, donated by the Holstein Association of Geauga County, and a registered Duroc-Jersey pig, donated by Mrs. Turner from among her blue-blooded porcine population at Lotusdale, were given the contestants. Leah Ludlow won the calf, and Lydia Cutts the pig." To Leah and Lydia we give the immortality that they deserve.

CAPE OF GOOD HOPE.

He who teaches at home in ease seldom reflects on the trials of the teacher in remote parts of the Empire, who, appointed to an outpost school, has often an initial difficulty in getting to it to surmount. An illustration is reported from the Division of Gordonia, in the Province of the Cape of Good Hope. There was an outlying school connected by no regular transport with any town. At first a teacher was sought in vain; ultimately, however, the School Board

HISTORY.

A HISTORY OF EUROPE: From the German invasion to the Great Renaissance.

By W. O. LESTER SMITH, late Senior History Exhibitioner of Merton College, Oxford. With numerous Maps and Illustrations. *[In the Press.]*

London: J. M. DENT & SONS, Ltd., Aldine House, Bedford St., W.C.

found at Upington, *two hundred miles away*, a labourer willing to put hand to the task. He started on horseback, but before half the journey was accomplished his horse died, and he owed all further progress to a chance traveller, who drove him to his destination. It is indeed hard for the Education Department to satisfy the wants of farmers in distant places. A letter asking for a governess in Ngamiland was lately received by it, after being three weeks on the way. The writer stated that he would be prepared to convey the teacher in a comfortable private cart from the nearest railway station to his farm, *a distance of 500 miles*. As the station mentioned is 1,130 miles from Cape Town, a teacher from any of the Western Province training schools would have to travel about 1,600 miles to reach her work.

School statistics for the first quarter of 1914 indicate noteworthy progress. "There are," says the *Education Gazette*, "99 additional schools in operation.

198 more teachers are at work than in the previous quarter, the number of pupil-teachers under training has risen by 418, there has been an accession of 2,814 pupils in the European enrolment, and in the coloured enrolment there has been an increase of 5,359 pupils, making a splendid total advance of 8,173 pupils for the quarter." At the beginning of the year some five hundred newly trained teachers became available, and School Boards and School Managers, by enlisting their services, gave new strength to the schools. Meanwhile, unqualified teachers, temporarily employed, are beginning to leave the ranks. In the Cape of Good Hope stress is laid on the teaching of music; we delight to read, in particular, how native choirs compete by districts, the successful group receiving a shield.

A DEGREE IN EDUCATION.

THE doctors, lawyers, and theologians have long possessed professional degrees, but teachers and other workers in the field of education have so far had no English academic distinction which was peculiarly their own. It is true that in London University and elsewhere an M.A. in Education has

been awarded, but the difference between this and an M.A. in some other subject has probably not been widely appreciated by the outside public.

The truth is that both the lack of organization in the teaching profession and the want of definiteness in the subject itself have prevented education from being recognized in the Universities as a relatively independent branch of knowledge. Moreover, so long as a teacher's mastery of his craft was supposed to be the fruit of experience alone, and a theoretical study of the principles of teaching was regarded as unimportant, there was little demand for a specific degree in education.

It is one sign of the change which is coming over the educational world that an English University has instituted a Faculty of Education with an appropriate degree. This step has now been taken by the University of Manchester, which has recently established the degree of Master in Education. The regulations provide that this degree shall be open to all graduates, whether of Manchester or other approved Universities, though candidates who have not graduated at Manchester must spend an additional year in educational work under the supervision of the Faculty. Besides having at least a Bachelor's degree, candidates must also have obtained the Manchester University Teacher's Diploma or Certificate in Education. The Diploma or Certificate in Education granted by some other University may, however, be accepted in the case of Manchester graduates. The degree will be awarded to candidates thus qualified who can furnish evidence that they have had at least one year's successful practical experience after gaining their diploma or certificate, and submit a satisfactory account of this experience and a satisfactory thesis on some educational subject.

The institution of this degree marks another step in the organization of the teaching profession, and is specially opportune at the present moment when the new Teachers' Register is bringing professional training into prominence. We hope that the experiment will be justified by its results.

IMPORTANT ANNOUNCEMENT**re CINEMATOGRAPH LESSONS**

Messrs. Pathé Frères beg to inform heads of schools and the educational authorities that they have drawn up a list of Cinema Theatres all over the country available for cinema lessons.

These Cinema Theatres are willing to give an hour's projection, during or just after school hours or on Saturday mornings, supplying the educational films (selected by the teachers) at an inclusive charge of £2. 5s. 0d.

A charge of 1d. per child in a fair-sized school (or in a group of schools) will entirely cover the cost of a highly educative and fascinating cinema lesson.

Will YOU help to promote and encourage Educational-Cinematography—the production of the best type of moving pictures?

Will you give YOUR children a lesson which will be a delight to them?

If so, kindly send a post card for further particulars.

**THE EDUCATIONAL DEPT.,
Pathé Frères Cinema Ltd.,

DUSTLESS

and HYGIENIC ROOMS.

In SCHOOLS, LABORATORIES, &c.
USE The Odourless, or Powerful Germicidal

FLORIGENE

(A Regd. Name suggested by FLOOR-HYGIENE)

Very **EARLY** in the **SUMMER VACATION**
for best results.

"Florigene" has been used for many years on Wood, Concrete, and Stone floors of every description, also on Linoleum and Cork Matting in Government and Municipal Buildings, and in all kinds of Schools and other Institutions in the United Kingdom and Colonies. It is acknowledged to be unequalled for the Effective, Economic, and Hygienic laying of dust, &c.

"Florigene" costs little :: ::

"Florigene" is easily applied ::

"Florigene" saves time and labour.

It is IMPORTANT TO NOTE that
ONE APPLICATION of "Florigene" **ALLAYS**
THE DUST and DIRT for 2 to 12 months,
according to traffic, not only during each sweeping
(without Sprinkling of any kind) but also throughout
all the intervening periods—which is even of greater
hygienic importance.

Not sticky—the ordinary daily dry sweeping
alone required—Scrubbing being optional.

"Florigene" is strongly recommended by
Medical and other expert authorities.

A Head School Mistress writes:—

"I am glad to have the opportunity of recommending 'FLORIGENE.' We have used it regularly on both wood and linoleum, and found its effects most beneficial, both in laying the dust and preserving the surface. The linoleum scarcely shows wear after six years."

(Repeat orders since received.)

A Grammar School Head Master writes:—

"We have used your 'FLORIGENE' for several years in this School, and we have found it excellent in keeping down dust, which is now never to be seen anywhere. I believe the health of this School has been better since. The air is certainly more pleasant to breathe when movements are going on, there is also a great saving of labour in cleaning."

(Repeat orders since received.)

Numerous similar Testimonials can be produced.

Send for particulars, Medical Reports, &c.,

NEW CLASS BOOKS

FOR

LOWER FORMS OF SECONDARY SCHOOLS

AND

UPPER FORMS OF PREPARATORY SCHOOLS

Arithmetic, Preliminary. By AUGUSTUS BARRACLOUGH, M.A., Second Master at Bournemouth School. 1s. 6d. With Answers, 1s. 9d.

This book provides a course of Arithmetic suitable for pupils of ten to fourteen years of age. Great pains have been taken to set the methods out as clearly and concisely as possible.

"The chapters are clearly written, carefully arranged, and accompanied with a plentiful supply of examples and exercises."—*School Guardian*.

"Quite admirably suited for its purpose."—*London Teacher*.

Chemistry, Preliminary. By H. W. BAUSOR, M.A., late Scholar of Clare College, Cambridge. 1s. 6d.

A course for beginners dealing with the leading principles of chemical theory.

"Nothing is taken for granted; everything is carefully and simply explained."—*School Guardian*.

"A clearly described and interesting course of Preliminary Chemistry for use in the lowest forms of schools."—*Education*.

English Course, Preliminary. By A. M. WALMSLEY, M.A., late Senior English Master, Middlesbrough Boys' High School. 1s. 6d.

A beginner's course in Grammar and Composition based mainly on inductive methods.

"An English Grammar embodying in general the recommendations of the Joint Committee on Grammatical Terminology. Unnecessary matter is excluded and the author has kept in view the real aim of grammar, namely, 'the production of good English.'"—*Athenæum*.

French Course, Preliminary. By H. J. CHAYTOR, M.A., Head Master of Plymouth College, and H. E. TRUELOVE, B.A., Modern Language Master at Plymouth College. 1s. 6d.

A beginner's course, containing Grammar and Translation from and into French, with provision for Oral work.

"This Elementary course supplies an excellent first year's work, well arranged on systematic lines, with due regard to the advantages of the Direct Method, and also to the necessity for thoroughness in the acquisition of the language. Free use is made of black type for emphasis."—*Athenæum*.

Geography, Preliminary. By E. G. HODGKISON, B.A., Assistant Master, County Secondary School, Crewe. 1s. 6d.

A book for beginners, containing Elementary Physical Geography, and outline of the Geography of the World, and the Geography of the British Isles in detail.

"This book bears the stamp throughout of the skilful practical teacher who combines a sound knowledge of his subject with an equally sound knowledge of the needs and capacities of the pupils for whose use the book is intended."—*Teachers' Times*.

History of England, Preliminary. By M. K. ELLIOTT, Girton College, Cambridge, and M. S. ELLIOTT, B.A. 2s.

This book is intended for the use of learners of the ages of ten to thirteen, and will in addition to political history deal fully, though in an elementary way, with those social and economic questions to which modern history teaching now rightly attaches such importance.

Gospel of St. Luke (Preliminary Edition). Edited by Rev. J. F. RICHARDS, M.A., and Rev. T. WALKER, M.A. 1s.*

"The Introduction, consisting of 36 pages, contains full but strictly condensed notes on the text, date, purpose, and characteristics of the Gospel, as well as a careful analysis—altogether a very complete and workmanlike edition."—*Secondary School Journal*.

Gospel of St. Mark (Preliminary Edition). Edited by Rev. J. F. RICHARDS, M.A., and Rev. T. WALKER, M.A. 1s.*

"Teachers, especially in junior forms, will find this a useful book. The introduction and notes are brief and to the point."—*Preparatory Schools Review*.

Gospel of St. Matthew (Preliminary Edition). Edited by Rev. T. WALKER, M.A. 1s.*

* With Introduction, Notes, and Maps.

THE JOURNAL OF EDUCATION.

A MONTHLY RECORD AND REVIEW.

SCALE OF CHARGES FOR ADVERTISEMENTS.

PUBLISHERS' ANNOUNCEMENTS—

Whole Page ...	£5 10 0	One Column (½ page) £3 0 0
Half Column (½ page) ...	1 15 0	One-Eighth Page ... 0 17 6
Per Inch in Column, 8/-.		

SCHOOL ANNOUNCEMENTS—

Scholarships, Official Notices, School Transfers, Partnerships, &c.—6d. per line; minimum charge, 5s.

Posts Wanted or Vacant.—30 words for 2s.; each 10 words after, 6d. *prepaid rate*.

Lectures, Classes, Non-Resident Posts, &c.—48 words for 3s.; each 8 words after, 6d.; *prepaid rate*.

An extra fee of ONE SHILLING is charged on advertisements with OFFICE ADDRESS.

If a receipt is required for an advertisement under 10s., a post card or a stamped envelope must be enclosed.

[Advertisers are reminded that "Letters addressed to INITIALS or to FICTITIOUS NAMES, or to a CHRISTIAN NAME without a SURNAME," at Post Offices are not taken in, but are sent at once to the Returned Letter Office.]

All Letters respecting Advertisements and Subscriptions should be addressed—

"THE PUBLISHER, THE JOURNAL OF EDUCATION OFFICE, 3 BROADWAY, LUDGATE HILL, E.C." Money and Postal Orders, on the Post Office, Ludgate Circus, E.C., should be made payable to WILLIAM RICE; Orders and Cheques may be crossed. "The London City and Midland Bank, Ludgate Branch." *Postage stamps can only be received at the rate of thirteen to the shilling.*

Notice must be given of all remittances through the Post Office from abroad stating full name and address of the sender; and all Foreign Money Orders must be crossed for payment through a Bank.

Date of publication of next issue will be found at top left-hand corner of front page

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

IDOLA LINGUARUM.

ENGLISH COMPOSITION.

By G. E. S. COXHEAD.

It has been often said, but it cannot be said too often, that composition is the art of self-expression in words. To admit without reserve the truth of this bed-rock principle, to apply it as the touchstone of method, and of judgment upon spoken and written effort, these are the indispensable guides to the teaching of composition. Familiar and fundamental as the principle is, danger of forgetting it lurks at every turn, even in sage counsel. When Dr. Johnson launched his famous tribute to Addison's style he gave good advice, but in a specific direction. Had he followed the precept himself without recognizing its limitations and clothed his virility in the delicate garb of Addison's prose, he might have written less ponderous and less laboured sentences, but he would not have been Dr. Johnson. His very faults assist in the revelation of his personality, and cannot be refined without loss. The book in which we see him testifies to the same truth—the blemishes of Boswell the man are often the excellences of Boswell the biographer. To multiply instances is unnecessary—self-expression is the goal of composition, and since there is a self in everyone it is the function of composition to bring it to adequate expression.

Logical pursuit of this aim will place oral before written composition—we speak before we write. Hence too much stress can hardly be laid upon sound and sympathetic guidance towards the revealing of thought in words during those plastic years in which children learn to speak. Environment is all-important here, as in so much else. As the experienced teacher looks back over the span of his labours he is forced

to acknowledge, almost with sadness, how small in this direction the measure of his success has often been with boys after the age of twelve or thirteen who have previously been in an infertile environment, by comparison with the success attained before this age through the unconscious education of a refined home. Since, however, oral composition, though lessening in quantity and widening in scope as a boy rises in the school, will be needed throughout the school course, this much of consolation can be derived from reflection on the superiority of early environment of a fruitful nature—that deduction can be made from it of the principles on which further development may proceed.

At the point when the child is making his first halting attempts to put his ideas into connected sentences it would be an unhelpful parent indeed who should feel it incumbent on him to correct mistakes in grammar. The real aid would be sensitiveness to the struggling thought and suggestion of the suitable language. Fluency, not accuracy, is the matter of moment: Bacon's terse comment "conference [maketh] a ready man" is still the model statement of the principle. As modern counsellors, from Sir Walter Besant to Mr. Arnold Bennett, can confidently recommend the budding author to write something every day, no matter what its quality, that he may acquire facility of expression, so the teacher of oral composition will not hesitate to adopt such devices as shall help to secure this paramount virtue of readiness. With junior forms, since imitativeness is strongest as years are fewest, it will be serviceable at times to let the more fluent members of the class speak first, and to arrange that practice in giving connected spoken answers be of frequent occurrence and not confined to the composition lesson. Once established, readiness of speech reacts on all subsequent work, just as the absence of it is responsible for that "inarticulate growl" that is the schoolmaster's perennial lament. To higher forms on whom may have descended the blight of shyness, whether of the master or, still worse, of each other, class debates offer a welcome relief from more formal methods, and will occasionally succeed where all else has failed. But to old or young readiness of expression is an inestimable boon: its too frequent absence constitutes almost the gravest ground for criticism of English classroom methods.

When the primary aim has been reasonably attained, the class may be directed to the subsidiary aims of oral composition—connexion, accuracy, conciseness, in (I think) that order. Since the subject-matter in this type of work should be, in the earlier stages, thoroughly known to all, and at no stage should be difficult, discussion should speedily elicit whether the speaker has delivered himself in good order. These two requisites, readiness and order, ensured, oral work has in the main effected its purpose; a little time may still be devoted to examining the correctness of the facts and the length of the wording, but both are better treated in written work, and too much attention to them here has a way of weakening the major benefits. It may be noted, however, that in the discussion on them is to be found a natural and convenient place for the earlier grammar lessons, dealing at first with the general structure of the sentence and advancing by gradual stages to more formulated syntax. The section cannot come to a more fitting close than by the assertion of a strong conviction that more progress has yet to be made with the spoken word than with any other division of the subject, and that the comparative lack of "ready" men is largely due to the laying of insufficient stress upon "conference."

As oral composition diminishes written work will increase. Main interest centres here; and rightly, since the greater degree of leisure and the less degree of nervous strain under which it is performed exact from it a higher standard of excellence both in thought and technique. It falls naturally under two broad headings, objective and subjective, work that is concerned fundamentally with the accuracy, order, and conciseness of the presentation of the matter, with little or no reference to the personality of the writer, and work that betrays its quality according to the measure of self-

revelation that it offers. Under objective composition fall *précis*-writing, paraphrase, translation, the presentation of topics of which the class should have common knowledge, such as the narration of a given story or the answers to questions of fact—in brief, work whose substance is equally ascertainable by all concerned and whose quality depends on its presentment; while under subjective composition fall the essay proper, the record of originality, imagination, emotion, mood—in brief, of personality.

The interrelation of these two is that of instrumentation to music, of chiselling to sculpture, of technique to art. Hence, though often not wholly dissociable, objective composition will, as a rule, come before subjective. And as the beginner in music is asked, in its early stages, to devote almost the whole of his time to instrumentation, the beginner in writing will be asked, certainly at the outset and probably throughout, to spend most of his time, one period a week at least, upon objective composition. In actual fact it will claim more time than this, for it belongs to every classroom and lies within the province of every master. Even the teacher of art or handicraft might profitably require in writing an occasional statement of the work in hand. Indeed, the definiteness of the knowledge that boys gain from contact with the concrete places him in a specially favourable position for obtaining work that shall be tested for accuracy and succinctness. Forgetfulness of the plain truth that composition has an integral part in every teacher's work is a fertile source of slovenly writing, and was responsible for grave rebuke of the work of scholarship candidates in science at one of our older Universities. It may be assumed that the composition master will in every case be entrusted with the English Literature, but this penetration of the need for expression into all branches of the curriculum renders it highly desirable that he should take other subjects as well. Ideal work for a man of literary gifts would be a combination of English and History or a Modern Language, or, if he had the capacity, of all three.

Consideration of the nature here assigned to this type of work will disclose that its salient characteristic is accuracy. Since the facts with which it deals are readily ascertainable, and, so far as the writer's purposes are concerned, are beyond dispute, error of fact is the worst possible blemish. To write a business letter which has been clearly outlined, to narrate a well known incident, to describe the preparation of oxygen, or the conditions of growing tea, to explain the structure of an aeroplane, and to introduce into these sheer errors of fact vitiates the whole production. Even in a *précis*, wherein brevity and proportion play such prominent rôles, these essential virtues are nullified by misstatements of fact. Accuracy then comes first; and closely linked with it are clearness (which may be held to cover unity, sequence, proportion) and the difficult virtue of conciseness.

To secure these qualities is the main business of objective composition. Many devices suggest themselves. It may be well to insist upon a preliminary synopsis, to collect the papers five or ten minutes before the close of the period, to read one aloud that errors of fact may at once be detected by the class, to initiate a brief discussion on the degree in which one or other of the essential qualities has been manifested, or, if a *précis* or a paraphrase has been attempted, to read a model answer while the flame of effort still illumines the mind. It may be well to throw a deficient quality into relief by reading a passage from an author who is a master of it, as from Macaulay for clearness or from Bacon for brevity. It may be well to adopt many such plans: variety of treatment is always effective when the aim is single. But for lasting result nothing excels the proper handling of correction—impressions are graven deepest not by merely imitating others' merits but by remedying one's own defects.

Supreme as the importance of correction is and universal as its employment, few methods present more pitfalls. There is the snare of correcting every blunder in every paper, a plan more prolific of wasted effort than any other single impulse of conscience. There is the snare of scoring mistakes through without explanation either then or sub-

sequently; of adding such vague comments as "too wordy," "muddled," "involved," "obscure," "wrong order," "turn," and so forth, remarks whose too frequent fate it is to be read, by a healthy boy, with much equanimity. The appending of a violated rule is more effective, but even here there lurks the danger of utter reliance on its efficacy. Slowly we realize that the varieties of error into which the corrector may stumble are not greatly incommensurate with those of the corrected.

To cast a searchlight upon pitfalls smacks of cowardice or even of malice, unless atoned for by the hardihood of devising what may profess to be a more quickening system. For convenience it is put instructionally. Correct any four or five papers thoroughly, the rest roughly and with little or no comment. Mark or letter them all. From the chosen few select two or three typical errors at most for treatment at the next lesson. Return the papers, write the selected defective sentences on the blackboard, get these corrected orally, deduce from the efforts of the class the rules violated, and make the pupils practise the writing of several sentences of their own, illustrating accurately the constructions under consideration. If the point attacked be a major quality that should appear throughout the composition, a single example may have to suffice—for instance, if the matter at stake be sequence in a narrative, announce a parallel subject, give ten or fifteen minutes for immediate attempts at an outline from which sequence in particular shall be required, read one or two aloud, and make the class discuss them briefly and contrast them with a model outline with which you have come prepared. When you feel that the error or errors under treatment have been thoroughly mastered, get the class to enter in a reserved portion of their MS. composition books the original inaccurate sentences with the violated rules, or the corrected outline with a statement of the previously deficient quality. For reference, do the same yourself. In general, major qualities are best taken first, errors of syntax or accident later. To crown the process, seize a moment at each lesson for criticism with one or two individuals.

On such a plan many mistakes will have been neglected; this will not matter: those attacked will have been thoroughly ventilated, and with strictness as to their non-recurrence they should gradually cease to recur. What does matter is that, the lesson being but part of a course, it will be necessary to have continuous design in the points handled. This may be arranged in one of two ways: it may be fashioned for oneself or a book may be followed. The former is the better but the more difficult, since it makes severe demand upon reflection, time, and experience. Reliance may, however, be unhesitatingly placed on the latter, now that textbooks are more common in which the grammar is deduced from the composition. It has, moreover, this advantage, that where more teachers than one are engaged in the work, their design will be uniform, if care be exercised that the books in use at different stages are by the same author or built on the same principles. The choice of the textbook is thus of great importance, and a copy of it might well be in the hands of every member of the staff.

It is not part of the scheme of this article to speak in detail of the subdivisions of the great branches of written composition. A word may, however, be inserted on two of them. There is cause for satisfaction that paraphrase has recovered from the disfavour into which it fell a few years ago. It remains the finest opportunity for scrutiny of the structure and meaning of complicated sentences, and for intimate acquaintance with the phraseology of writers of different epochs. It establishes the life of the sentence and of the word. No better exercise exists for scoring into the most mechanical portions of our work the truth of Goethe's admonition: "All order leads at last to pedantry." There is cause too for satisfaction that *précis*-writing has become so universal: it is ideal work for developing the outstanding qualities of this type of writing. All that is now wanted is better books: the trouble with them is what Steele said was the trouble with flatterers, "there are so few good ones."

They might contain more and longer extracts, within the pupil's experience, and be issued in two, if not three, consecutive volumes graded in difficulty.

Whatever the needs of this branch of the subject they will certainly be met, for it has behind it something of the impelling force of national will. Year by year its qualities claim wider and deeper recognition. Moreover, the last decade or so has seen, and rightly seen, the introduction into the curricula of secondary schools of so many subjects, all struggling to assert their undoubted value, that congestion has become acute. The imperative need of the moment is a general unloading. It may be predicted that the operative principle on which this simplification will be carried out will be the defining more precisely the main service to be rendered by each school by bringing its syllabus and methods of teaching into closer connexion with the probable careers of its pupils. Applied to composition this may mean, for the majority of schools, yet greater insistence upon it as an instrument of expression in all walks of life, that is to say, upon objective work. In itself we may welcome this. But it may entail corresponding neglect of the higher branch, the essay proper, for which in any broad view of the subject objective work is but a preparation. In any event, it will brace all who are interested in the essay as an instrument for promoting the humanities if they fortify themselves by reflection on its essential service and on devices for securing it.

Reference has already been made to the fact that the alliance between technique and art is at times so close as not to allow of precise analysis: true, technique obeys rules and may be learnt, but in its highest flights, no less than in those of art, great wits may gloriously offend and critics diffidently acclaim. There is a genius in instrumentation which is itself subjective in character. But ordinarily the intrusion of personality into strictly objective composition is a blemish. It would be out of place to introduce into a *précis* of correspondence between the Foreign Office and the Sublime Porte a homily of one's own on the position of Christians under Moslem rule, or to insert in a description of the preparation of yellow phosphorus strictures on the immorality of processes which may produce phossy jaw. Where, however, the personal element could be intruded without offence the first step has been taken towards subjective work. The transition often presents highly debatable ground of singular interest, as in the case of the controversy whether history should be written as a science or an art: but for our purposes, wherever the personal element may colourably appear it should dominate.

Of the essay, then, the salient quality is individuality. Hence to foster this vital element resolves itself into procuring the closest possible connexion between a boy's life and his writing. All therefore that helps to widen his horizon reacts upon his essay, and the composition master is, on this plane, as interested in the development of character as he should be in reading literature with his class, or, indeed, in any personal influence that may be brought to bear upon them by himself or by others. Much of this takes us beyond the walls of the classroom, whither we cannot follow here, into every effort of the school to develop intellect and character.

Within the composition room the task of promoting individuality may begin from the earliest days, provided it be not attempted too frequently. The strain of a call upon genuine self-expression is so great that it should not be asked for more than once a fortnight, or there will be danger of its sinking into mere routine. It is vital that the two great influences that mould character, our own experience and the experience of others as shown in books, should be laid under such contribution as shall keep them vigorously alive.

For younger pupils, then, the subjects chosen should be those with which they are familiar—an account of a particular match with a rival school, the description of a private hobby or of a favourite game, the uses to which they put string, their chief pursuit in holidays, anything of which they

have good knowledge. Their reading may help to a little imaginative work, the narration of a fairy story or of a legend or a short original tale. Few suggestions for work at this stage are more fruitful than that for which Mr. P. J. Hartog has gained general acceptance, that their essays should be addressed to someone of their acquaintance: sure of a sympathetic reader, they gain courage for what is specially wanted, the expression of their own feelings. The thread which unites all such methods is avoidance of the temptation to affect knowledge or to simulate feeling: "the foundation of good writing is sincerity."

As boys rise through the Middle and Upper School increasing place may be found for argumentative and critical work, with a very occasional call on the higher branches of the imagination. Bearing in mind that the cardinal principle to follow is avoidance of insincerity we shall agree that choice of subject is all-important: it must be such that the class may have reasonable knowledge of it, without preparation. A prepared essay on, say, "Figures of Speech in Writing" may produce from a class not ripe for it a catalogue of definitions, with the same example of a metaphor and a simile on half the papers. And who has not discovered, from the shock of copious platitude, that moral subjects may be the most dangerous of all?

School life is ordinarily not rich enough nor deep enough for furnishing the necessary experience: composition begins to owe a great and increasing debt to literature. Topics that display the requisite depth of argument, of critical insight, of imaginative beauty, abound in its pages. Their treatment falls more naturally under methods of reading literature. All that is needful to say here is that understanding of an author's subject, of his purpose in selecting it, of his method of presentation viewed as the index of his mood, is the best possible stimulus towards self-development on this higher plane. Appreciation of the power of this truth led to Lord Morley's deliberate advice: "So far as my observation has gone, men will do better if they seek precision by studying carefully, and with an open mind and a vigilant eye the great models of writing, than by excessive practice of writing on their own account." The influence should not only be felt, it should be as far as possible realized: sensitiveness towards the expression of others has to be translated through practice into sensitiveness towards self-expression, the goal of all good composition teaching.

Attainment of this supreme end will make the heaviest drain upon the master's experience and resourcefulness. And just because it is his own personality to which the ultimate appeal will be made, it is exceedingly difficult to formulate general procedure. Some few suggestions may, however, be advanced. In argumentative and critical work class-debate will disclose the necessity for buttressing the weak spots in the boy's own outlook and for refuting the strength of his adversaries. He will become familiar with the notion that truth has many facets, and will have opportunity to "weigh and consider." Better even than the literature lesson, talks with his master may transform his partiality for this or that passage of imaginative beauty into conscious appreciation of the subtleties of art that have gone to its production, and so nerve him to imitation, however remote. Contrasts between different presentations of the same theme will instil into him the primary value of defined standpoint. Study of a passage from Shakespeare or from Burke may bring home to him the worth of emotion to the intellect: "great thoughts spring from the heart." A score of such devices may be employed to give insight to his faculties and richness to his feeling. The whole course might culminate in a Sixth Form annual essay, on a subject of his own choosing, and on which the blue riband of the school's composition might be awarded. If, finally, it be never forgotten that every trace of pretence or of pretentiousness should be unfailingly hunted down in correction, and that all criticism of subjective work should be driven home by discussion between boy and master, something will have been done towards achieving honest and precise personal writing, and even, if it be the will of fate, towards style.

REVIEWS AND MINOR NOTICES.

The Reign of Henry VII from Contemporary Sources. Selected and arranged by A. F. POLLARD, M.A., Hon. Litt. D., Fellow of All Souls College, Oxford; Professor of English History in the University of London. 3 vols. (Longmans.)

Among historical works published for the use of students these three volumes stand pre-eminent for their educational value. Prof. Pollard lays before his readers a large and varied collection of materials for history, tells them in general terms in his introduction what their significance is, and leaves them to find out and judge for themselves how far each of his documents contributes to the justification of his general survey. Had less been done for them by way of guidance they would have been left without the help which students have a right to expect from their teacher—instruction as to how to work to the best advantage—while more would have encouraged dependence on others and have appealed less strongly to their intellectual faculties. He has chosen the reign of Henry VII for the subject of his new experiment in the teaching of history chiefly because the published sources are difficult of access, and he has found that students are apt to rely too exclusively on Bacon's famous portrait of the king "painted more than a century after his death." In his choice of authorities he has avoided quotations from histories, even from the almost contemporary history of Polydore Virgil, on the ground that a history is a fabric raised according to its author's design, while his object is to set out materials. Of these, even of printed materials to which his collection generally is confined, he has found no lack, and has indeed had to exercise much discrimination in order to choose those which best illustrate his period. He has arranged them according to subjects, giving his first volume to narrative extracts, his second to constitutional, social, and economic history, and his third to foreign relations, the Church, and Ireland, and has divided his Introduction accordingly; and in each division he has printed the documents in chronological order with their dates affixed.

The Introduction is in itself a treatise of great value, containing the results, not only of exhaustive study, but of independent thought vigorously expressed. For example, a superficial view of the reign would suggest that Henry's chief difficulty arose from the ill-will of the Yorkist party, which was strong in many parts of the kingdom. Dr. Pollard goes deeper into the case: "The problem was not a party but a frame of mind." Englishmen in the fifteenth century had no respect for law; men were determined, if they could, to have their will, "with or without law." In the south-east, the most prosperous and advanced part of the country, they were on the side of the Government, which necessarily endeavoured to uphold law and order; in the North, in Cornwall, and wherever feudalism prevailed, they were against the Government. The Yorkist and Lancastrian quarrel largely determined the character of the rebellions of the reign, but the principle at stake was not dynastic, the rebellions were outbreaks of personal discontent, caused by direct taxation. Dr. Pollard shows why such taxation was at that time peculiarly irritating: it was uncertain in occurrence, it was unfairly assessed, and it was not made tolerable by national sentiment. Patriotism was local: the Cornishmen refused to be taxed for the defence of the Scottish border. In the new monarchy which Henry founded, local "liberties" were to give way before national government. Constitutionally, the reign was a period of change: no one can fail to see that the kingship under Henry VIII was different from what it had been under Edward IV, and yet the laws of Henry VII were "not novel in kind"; they exacted obedience to existing laws. Speaking of the way in which Henry VII insisted on respect for law by inflicting an enormous fine on his host, the Earl of Oxford, Dr. Pollard quaintly remarks that it was not the act of a gentleman, "but it was Henry's duty to be a king before he was a gentleman." As an introduction to

the study of the constitutional aspect of the reign, nothing could be better than his remarks on the character of the Parliament at that period, and his warning that we must not think of the Constitution as then already defined. Is it defined even now? He points out that Parliament was the King's High Court to which certain representative elements had been added, and that the formula describing a law as enacted by the Crown, had "a very real sense in 1485."

The King's foreign policy is contrasted with that of Wolsey and likened in principle to that of Queen Elizabeth, for "Henry's ambitions were centred in England." Although early in his reign, when the goodwill of Spain was important to him, he was drawn by Ferdinand of Aragon into a desultory war with France, he would not be tempted to embark on a war of conquest, and carried out a design which he had formed probably more or less from the outset by concluding the profitable Treaty of Etaples. That treaty, we are told, may be regarded as "the keystone of his foreign policy." For a time he continued to be anxious to keep on good terms with Spain, using Ferdinand as a counterpoise to Maximilian of Austria, who was constantly giving him trouble by supporting pretenders to his throne, and he was held to have gained no small advantage in 1497 by the arrangement of the marriage of Prince Arthur with Catherine of Aragon. How skilfully he played his cards during the next few years is shown by the anxiety of the Catholic sovereigns for Catherine's marriage to Arthur's brother in 1502. He was then carefully cultivating a friendship with Philip of Flanders, and though this policy was to cost him some expense, it was destined to bring him in a rich return. In this connexion Dr. Pollard observes that the obligations which bound Philip to him were already so great in 1506, that it is difficult to say how far the advantages which Henry gained from him in that year should be set down to the accident of Philip's enforced visit to England.

The records contained in these volumes are so various in kind, and come from so many different books, that it is impossible to give a detailed account of them. Among them will be found statutes, treaties, law cases—many of them Star Chamber cases—notes of events in contemporary chronicles, reports of ambassadors, official and private letters, two or three poems, and some delightful, extracts from the "Italian Relation," printed by the Camden Society, and the "Book of Howth." In a selection of this kind a reader must inevitably find one or more pieces which he would not himself have included; but Dr. Pollard's choice will, we believe, commend itself to all who are qualified to criticize it as in almost every case eminently judicious. He reprints his texts from previously printed sources without attempting a scientific edition. For the purpose of these volumes it would have been a waste of time and labour to have done so. He has, however, corrected some conjectured dates and amended some obvious errors. Two at least have escaped his notice. Certainly Margaret Beaufort did not on January 28, 1501, write to her son from "Calais town" (Vol. I, page 220), a strange description, suggestive of a modern railway station, but from Colyweston, whence she wrote the letter of ten days before, which precedes the one in question; and "the temperalytes of the feys" (Vol. II, page 5) demands the substitution of *s* for *f*. One reference should be amended: the volume on "Star Chamber Proceedings," to which a reference is given (Vol. II, page 55), is Vol. XXVII of the series issued by the Council of the Somerset Record Society. These are small matters, and, as a whole, Dr. Pollard's volumes are laudably free from oversights in revision.

Eight Years in Germany. By J. A. R. WYLIE.

(10s. 6d. net. Mills & Boon.)

The author of "My German Year" now gives us her fuller and riper impressions of an eight years' sojourn in the country. She takes as her motto, "Tout savoir est tout pardonner." The first credential that she offers as a portrait painter is that she has grown to love her sitter, and her main object is to remove English antipathies and prejudices. If we accept her presentment of German sentiment and policy, the prospect of improved international relations does not seem very hopeful.

The German nation is the strong man armed, but not yet strong enough to be sure of keeping his goods in peace. The soreness created by English sympathy with France in the war of 1870 still rankles, and has been aggravated by the recent *entente* between England and France; and we are told that it was only a doubt as to her preparedness that prevented Germany from espousing the cause of Krüger. "Now when I see a poster with 'Mr. Churchill's offer to Germany' I blush with discomfort at the thought of the ribald amusement which the announcement is causing across the water." We are told, moreover, that the growth of the Labour party will not make for peace. German Socialists are, indeed, opposed to big armaments. They are a thorn in the side of a Jingo Government, and each party in the Reichstag courts their alliance to further its particular object; but in any national crisis, such as the Agadir affair, they would be swept away in a wave of popular indignation.

Most instructive is the account of the Zabern scandal as seen through German spectacles. The only man to be pitied is the young lieutenant who will never be placed in a position of responsibility. "Burdened by the knowledge that if he once allows a single member of the crowd to actually attack he will suffer instant dismissal from the army, he orders the arrest of one of his tormentors, and in the struggle the man, a crippled cobbler (alas for English sentimentality!), was struck and slightly wounded. . . . Ask any member of a *Kriegerverein* what he thinks of the Zabern affair, and he will tell you that the young lieutenant should have hit harder." In fact, according to Miss Wylie, it was an everyday incident out of which the Socialists tried to make capital. When discussed in the Reichstag it vanished in smoke, and the German public were righteously indignant that the English press should have taken it seriously, and made it a handle for casting a slur on the honour of the German army, and therefore of the German people, for the army and the people are one.

In the same way the standing charge of political servility is stoutly repudiated. In freedom of thought, in social life, in religion, Germany is the finest nation on earth, and if it acquiesces in an absolute monarchy tempered by bureaucracy, it is simply from a profound consciousness that this form of government best suits national needs and aspirations. The Gaul and the Muscovite are at its gates, and thus only can it secure itself from foreign invasion, and vindicate its place in the sun.

It is a pity that in her apology for Germany Miss Wylie should have been betrayed into an exhibition of anti-patriotic bias. "The responsible and conscientious autocracy of a Kaiser" is contrasted with "a self-seeking and corrupt oligarchy." The German, we are told, "would not tolerate at the head of his judicial system men who had offended against the unwritten laws of public honour." It is not the fact that the London policeman's evidence outweighs that of ten non-official witnesses; that London museums are closed on the Sunday; nor, alas! that English cinemas never portray tragedies of robbery and murder; though it is quite true that in England suicide is a crime, and a duellist, even if an officer, who kills his adversary is guilty of murder.

A pleasanter task remains, to note the characteristics of German social life and institutions, for which we can share the author's admiration. First we should put the unostentatious simplicity of the German home. Berlin, as is truly observed, is not a typical German city. It is the paradise of the *nouveaux riches*, of Jews and other aliens; in fact, the Rome of Juvenal's day. Elsewhere in Germany wealth is at a discount, and *Geist* is the only passport to good society. The reverse of the shield is that there is scarcely any admixture between the various classes of society; the nobility (among whom must be reckoned officers of the army), the learned professions, the Civil Service, trade and commerce, all live in watertight compartments.

From German hospitals we might well learn a lesson. The author gives her own experience of a German hospital and an English nursing home, and in every respect prefers the former. For an operation that in England must have cost her at least £100 the total cost was £20. She testifies, moreover, that

the public support of hospitals has no ill effect in drying the wells of private charity.

Education occupies but a small space, and the only institution of which we do not remember to have seen a full account before is a *Cadetthaus*, or preparatory school for officers. The discipline is Spartan but not unkindly, and the fees for officers' sons are about a fifth of those at Wellington College. There are virtually no other boarding schools in Germany, and needless to say the author paints in glowing colours all the benefits of the day school. What appears to us a radical defect in the system is that for the German boy the struggle for life begins at the age of ten. From his earliest infancy it is impressed on him that his future career, his making or marring, depends on his performance at school. He makes friends, both boy and girl friends (and girls are allowed as much freedom as in America), but these are home friends—there is little *camaraderie* and no *esprit de corps*. He has no time and little inclination to play games, and his favourite relaxation is a country walk, or *excursion scolaire*. The result is that in a school-leaving examination he would beat the public-school boy hollow; but he has missed the special joys of boyhood, and the frequent boy suicides in Germany are a symptom of the evils to which this "intensive culture" may lead. We have learnt much from the book, but the author has not converted us to universal conscription.

Some Leisure Hours of a Long Life. Translations into Greek, Latin, and English Verse, from 1850 to 1914. By HENRY MONTAGU BUTLER. (7s. 6d. net. Cambridge: Bowes & Bowes.)

The most censorious of critics would be disarmed by the modest preface, which claims for this volume mainly an autobiographical interest, and disclaims any pretension to compete with recent masters in classical translation, living and dead, nine of whom (or thirteen if we include the dedication) have the honour to be named. It would, indeed, be an invidious task to assign an order of merit, and it is enough to say that, as in the reformed Cambridge Tripos list, we should unquestionably place Dr. Butler in the First Class, with an asterisk of distinction. One specialty of this volume is the number of alternative versions in different metres. Metre seemed to the translator to have a personality of its own, and to determine not only the form, but the spirit, of the rendering. Thus, of Herrick's lyric, "What needs Complaints," set for a Trinity College scholarship, there are twenty-two versions.

Each little metre sobs its separate tale,
A sigh, a groan, a lullaby, a wail.

Each version assuredly has a charm of its own—"Mille habet ornatus, mille decenter habet"—and we can imagine a jury of scholars awarding the prize each to a different version. Yet it may be objected that the original does prescribe one metre as the nearest analogon. In this case we should give our vote for the "Collis o Heliconeai" of Catullus, and certainly rule out of court hexameters and elegiacs.

Still more interesting are the twenty-one versions and paraphrases of "Crossing the Bar," not only because we can compare them with the work of famous scholars, but because the artist has admitted us to his studio and frankly discussed the difficulties of the subject and how far he has succeeded in meeting them. On one of these it is worth dwelling as showing how inadequate even Greek is to render the inmost spirit, the symbolism, the mystery of modern poetry. "When that which drew from out the boundless deep Turns again home" denotes the turn of the tide, but it connotes no less clearly the return of the soul to the Infinite whence it came. The difficulties of "bar" and "bourne of time and space" may, as Dr. Butler has proved, be tackled, but this is insuperable. "Bell" is here interpreted of curfew or vespers. We prefer the bell that tells the hour of the watch. We choose, chiefly on account of the brevity, a Greek and a Latin version of Tennyson's epitaph on Sir John Franklin:

Οὐ τῇδ' οὐ τάφος ἐστὶν· ἐκὰς, μεγάλυμε κέχωσαι
ὄστέα δ' ἀμφιχυθεὶς λευκὸς ἔχει Βορέας.
Ψυχὴ δ' ἡ μακαρίτις ἀκύμονα πόντον ἀλάται,
ἡρεμ' ἐρεσσομένη πρὸς πόλον οὐρανιδῶν.

Hinc abes; ossa procul Boreas habet algidus. Ipse
Non nostrum adveheris, nauta beate, polum.

Nor can we refrain from quoting, though not in verse, a perfect specimen of Dr. Butler's lapidary skill:

EDWARDUS WHITE BENSON, S.T.P.
PRIMUS APUD TURONENSES EPISCOPUS
ET PER XIII ANNOS
ARCHIEPISCOPUS CANTUARIENSIS
ECCLESIAE ET PATRIAE
LUMEN ATQUE ORNAMENTUM
COLLEGII NOSTRI
PER TOTAM VITAM AMANTISSIMUS
QUO DIE SOCIUS ADMISSUS ERAT
EODEM XLII ANNIS INTERPOSITIS
OBDORMAVIT IN CHRISTO.

This epitaph illustrates, by the way, a distinctive trait which all who have heard Dr. Butler as a preacher, an orator, or a speaker on private occasions cannot fail to recognize—his extraordinary memory for dates, and the happy use that he made of them.

The volume is almost evenly divided between poems, sacred and profane, and the first part, the *Lyra Sacra*, we must praise with some reservation. The sense is faithfully interpreted and the Latin is faultless; but we cannot help asking ourselves whether the labour was well spent. This, indeed, in the retrospect, appears to be the translator's own verdict: "The metres of Ovid or Catullus or Horace are not well suited to such sacred themes." We cannot, however, agree with him that some form of Greek lyric, the Pindaric ode or a tragic chorus, would suit them better. Latin elegiacs, the metre here chosen, have at least the merit of reproducing one feature of Hebrew poetry, the rise and the "falling in melody back." We cannot help suspecting that it was the unconscious influence of Harrow schooldays, when the Psalms used to be set during Lent for Latin verse that dictated Dr. Butler's choice. We doubt whether it were possible to improve on Dr. Butler's elegiacs, but, like M. Jourdain, we fall back on the prose of the Authorized Version as the best of all. For hymns, again, we should prefer medieval-tinged Latin. We remember James Riddell's brilliant

Sidereus locus est, animis datus ille beatis,

and

Audeat et Jordanis aquas et frigora mortis,
Littoris impatiens ulterioris amor;

but this is an echo of Virgil, and Mr. Gladstone's

Christus per me perforatus

better expresses the Christian hymn.

We would fain have quoted many of the exquisite versions in the second part and compared them with those which have been already published by H. A. J. Munro, Calverley, and others, and also have discussed the English translations from Virgil and Horace. What impresses us most is the high level of attainment. There are no *tours de force* such as Jebb's version of "Abt Vogler," few feats of legerdemain such as Evans's

Praevhor oppidulum, bis dena mapalia viso,
Et quinquaginta pontibus impediōr;

but the same *spiritus intus alit* as inspired Jebb's "Tu, puer, in vita cur morer, inquit, eris," and Munro's "Met- aque mors, quoquo gloria flectit iter," and it is but once or twice that we have put our finger on what seems like a blot.

Dum te pica loquax murmure garrulo
Mulcet sub trabe pinea

omits the emphatic "only," and perverts the magpie's grating "chatter." We would venture to emend—

Nil turbat nisi quae pica loquacior
Garrit sub trabe pinea.

In "A slumber did my spirit seal," *Caccus cram* of the first line and the following *stultus* seem to us false notes. The

vision is one of perfect calm and peace. Lucy has fallen asleep on the bosom of Mother Earth and is again a part of godlike Nature.

The whole volume is "a votive tablet," and we will end with the concluding words of the preface:

At Harrow, at Trinity, in Egypt, in the Desert of Sinai, in Palestine, in Greece, in Italy, in France, in Switzerland, in Scotland, on railway journeys, in mountain walks, in solitary hours, in times of sorrow and depression, in times of overflowing happiness, the old habit of making verses, begun almost before Harrow days, November 5th, 1846, has clung to me as a faithful companion, helping me, however imperfectly, to keep in touch with the thought of the wise, the pious, the pure, and giving a kind of quiet unity to a life of some labours and many distractions.

To the Gordon Inscription we are told that Jowett added "the all-important words, *as seeing Him who is invisible*." No epitaph on the Master of Trinity (*absit omen*) could do him justice that did not add "*nec cithara carentem*."

The Reign of Henry the Fifth. By JAMES HAMILTON WYLIE. Vol. I: 1413-1415. (25s. net. Cambridge University Press.)

The learned author intended this large and handsome book to be the first of four volumes upon the reign of Henry V. Death has removed a distinguished and laborious scholar; and, although perhaps few historical students would have attempted to master this extraordinary work, everybody who is interested in English history must deeply regret that it will never be completed. It is a rich mine of information, and like Dr. Wylie's previous book, "*The Reign of Henry IV*," will become at once a standard authority.

We have called it an extraordinary work. At first sight it looks absolutely unreadable; and the literary scoffer will doubtless dismiss it as the *reductio ad absurdum* of scientific history. It is indefatigably annotated; two-thirds of the printed matter will be found in the foot-notes. It covers only the two first years of the reign of Henry V, the dull years in a brilliant reign. Could anything seem more repellent? Yet, as one reads, first impressions are found to be incorrect. Dr. Wylie was not a "scientific historian" at all, except in his amazing knowledge of published and unpublished, of good and bad, authorities. He was intensely interested in the fifteenth century, in the same sort of way as a good local antiquary often becomes interested in every stone and carving of the cathedral in his native city. He knew no sense of the relevant, because nothing was irrelevant to him, not because he was unable to pick and choose. If the historical readers of this *Journal* will read straight through the book, paying no attention to the footnotes, and not troubling too much about details, they will find a rich stock of valuable and amusing information. The appointments of John Stanley and of John Talbot as Lieutenant of Ireland suggest, as an illustration of the state of Ireland, an account of the journey made by Raymond of Perillos in 1397. Raymond visited the Purgatory at Lough Derg, "to try if he could find the spirit of his dead sovereign [John I of Aragon, died 1395] there and see what pains he was enduring." His story, analysed by Dr. Wylie, is full of interest (pages 70-76). There are very important chapters upon Henry V's religious foundation, and upon the God's-houses or Hospitals of medieval England. The preparation for the French War provokes a chapter upon the indentures or records of enlistment, a chapter abounding in curious detail and revealing Dr. Wylie's intimate acquaintance with the contents of the English Record Office. A large part of the book is concerned with French history, which is studied with as much detail as that of England. We call particular attention to the biography of the famous horologist, Master John Fusoris, and to his relations with the Bishop of Norwich (pages 498-510).

A specialist review would deal with Dr. Wylie's numerous contributions to knowledge and show how he has modified current ideas of the early reign of Henry V. For example, the last years of the famous Chief Justice Gascoigne are found to be in somewhat disappointing contrast to Shakespeare's "noble sequel" (pages 16-18). But these details are interest-

ing rather than important; and we prefer to urge our readers not to neglect a book which at first sight may repel them. It is full of good reading; the fit handiwork of a fine scholar.

The Hampshire Experiment in Education. By C. R. ASHBEE. (3s. net. G. Allen.)

This is a sort of educational Erewhon, an attempt to picture "what might be" in an agricultural district. The intermixture of fact and fiction is inartistic and mystifying. Thus we suppose that the list of distinguished lecturers, from John Masefield to Miss Miakawa Sumi, who came to the Central Institute at Easthampton (in one place a market town, in another a remote village) is a fact, and that the elaborate winter curriculum for twelve villages is pure fiction. The need of decentralization, of local initiative, of handicraft as opposed to book learning, of continuation schools, and of practical artistic training are duly enforced, but Mr. Ashbee seems unaware of what is being already done, and convinced that nothing good can come out of Whitehall. Had he seen the papers on "Rural Education" read at the University of London Conference, or studied the last Reports of the Board of Education, he would have modified some of his views. He is an authority on art, and all he says on art training, including music and acting, is well worth study; but for extending the "Hampshire" experiment to other rural districts he gives us little practical guidance.

Experience Teaches. By IVON TRINDA. (Cloth, 2s. 6d. net; leather, 4s. net. Simpkin, Marshall.)

A book of advice to youth, with "by way of antidote 'reflections' on things in general, with some irrelevant anecdotes." We may gauge the author's capacity as a Mentor by the first chapter on school studies. First anatomy, including the vermicular appendix; then arithmetic, with discount, barring the higher mathematics required in London Matriculation; no history; science, including "modern views of the almighty atom"; no Greek, but Latin a *sine qua non*; handwork. Incidentally, the youth is instructed to eschew strong drink, to smoke in moderation, and to regard Free Trade as the mark of the beast. We forbear any criticism for fear we should be ranked with the "ultra-literary man" to whom the manuscript was submitted, as one who will argue that black is white and refuse to read the *Daily Mail*.

High School Ethics, Book I. By J. HOWARD MOORE. (3s. Bell.)

This is the first of four books on the above subject by the Instructor in Ethics, Crane Technical High School, Chicago. It is very miscellaneous in its scope, its topics including *The Place and Meaning of Ethics* (10 sections), *The Ethics of School Life* (24), *The Spirit of Sport* (7), *Pets* (9), *Source of Sealskin, Ivory, &c.* (14), *The Rights of Women* (13), *Traits of the Ideal Character* (22), *Habits* (19), *Habits that Help* (6), *Birds* (18). There is much that is suggestive in the treatment of these topics, and much, in default of actual school lessons on ethics in the curriculum, that would be of value for essay-writing purposes. Much of the good advice is of an unconventional kind, and bears the impress of recent psychology. "Nobody has yet suggested that they [the inhabitants of Mars] might be frogs or invertebrates" indicates that the author has not read Mr. Wells's "*War of the Worlds*"; but the idea he is conveying is a good one—namely, that we are prone to interpret everything in terms of our own nature instead of "being universal." The Elizabethan women, we are told (page 99), were taught to play "the flute or harp." Should not this be the "lute or harp"?

The Mind at Work. Edited by GEOFFREY RHODES. (3s. 6d. net. Murby.)

The bulk of this "handbook of applied psychology" is by Mr. E. J. Foley. Dr. C. Buttar contributes two physiological chapters, Prof. Bernard one on "Applications of Psychology to Social Problems," and the Editor one on "The Mechanism of the Will" and one on "The Subconscious Zone." It is rather a collection of essays than a handbook, and it does not afford much practical help to the teacher. Problems of the classroom are hardly glanced at. There is a Table of Psychological Terms which defines *amœba* and *neuron*, but omits feeling, faculty, idea, perception, and conception. Inverted commas abound, but the author is rarely mentioned.

School Clinics at Home and Abroad. By L. D. CRUIKSHANK. (2s. 6d. net. National League for Physical Education and Improvement.)

Much useful information has been gathered by Dr. Cruikshank with reference to the problem of the treatment of school children and the working of school clinics. The subject is discussed from every aspect, and the statistics and other information are up to date. The legal, administrative, and historical sides of school

clinics receive their share of attention, and various suggestions based on practical knowledge enhance the value of the book. Short accounts of school clinics on the Continent and in Australia and the United States complete the exhaustive survey, and the good illustrations show, perhaps more than anything else, the completeness of outfit and the valuable work that is being done in this sphere.

Greek Wonder Tales. Edited by LUCY J. M. GARNETT.
(6s. net. Black.)

The title recalls Hawthorne's "Wonder Book" and old Greek mythology, but these Fairy Tales all come from Modern Greece, and are more akin to the "Arabian Nights" than to the "Iliad" and "Odyssey." We have still the Moirae, or Fates, but they resolve themselves into the presiding destiny, the Genius, or Fairy Godmother. The Nereids are now nymphs of the mountain as well as the sea. The Stringle, or Lamia, is a new invention, and so is the Dhrakos, or Troll, and the Stoicheion, or elemental spirit, so the author maintains that St. Paul's *στοιχεία τοῦ κόσμου* should be rendered. We wish Miss Garnett had informed us whence she had taken these folk-tales "in various Greek dialects": she calls them translations, but it is evident that they are adaptations, and very pretty fairy stories they make, though there is nothing distinctively Greek about them. None of them touches on the darker side of Greek superstition, the modern Centaur or Ghoul.

Limen: a First Latin Book. By W. C. FLAMSTEAD WALTERS and R. S. CONWAY. Fourth Edition. (3s. Murray.)

In the fourth edition of "Limen," which has now reached its thirty-second thousand, the terminology of the Joint Committee has been fully adopted, except that "pluperfect" is retained for "past perfect," "imperfect subjunctive" for "past subjunctive." The new terms "protase" and "apodose" do not commend themselves as an improvement on the "If-clause and Then-clause." An "Appendix of Suggestions for Teachers on the Oral Method" has been added. The authors have gone the right way to work by consulting a number of skilled teachers and availing themselves of their suggestions.

Junior French Reader. By E. RENAULT.
(1s. 6d. E. Arnold.)

The commonplace title does not do justice to this admirable primer, *qui miscuit utile dulci*, a collection of fifty short stories and anecdotes, many of them new to us, and all of them samples of French *esprit*. They are drawn from all sorts of sources, but so adapted for the purpose that the editor may justly claim them as *son bien*. The questions, too, which follow each anecdote are not, as is commonly the case, machine made, but suggest difficulties and differences of idiom that might well escape the notice of an English teacher. The subjects for free composition are beyond the powers of juniors without a good deal of help from the teacher, and generally speaking we should recommend the book for pupils in their third year of French; but we warrant that any pupil who has mastered these fifty lessons will pass triumphantly the French of the London Matriculation or the Associateship of the College of Preceptors.

The School French Grammar. By ERNEST WEEKLEY. (Clive.)

This is a separate issue of the grammar contained in Prof. Weekley's "Matriculation French Course." Attention is called to the *tolérances* of the French Minister of Education, but the reformed grammatical nomenclature is not adopted. The accidence of verbs occupies nearly a fourth of the volume. We do not see what is gained by conjugating in full negatives, interrogatives, and passives. In the Syntax we still have the subjunctive of "doubt." Under verbs expressing doubt are classed *il est sûr, certain, évident*; nor is it explained why *je ne doute pas* should take a subjunctive. Otherwise the Grammar commends itself by its brevity and clear type.

Beaumarchais. Le Barbier de Séville. Edited by F. H. OSGOOD. (2s. Ginn.)

A scholarly edition. The Introduction gives succinctly the main facts of Beaumarchais' literary life and the Notes supply all needful explanation. Occasionally they are somewhat long winded, as on *Argus, éternuer*, and occasionally a note is lacking, "mettre à plaisir de l'importance à tout" (page 33); "tu éternueras dimanche" (page 36); "l'Amour" (page 50). It might have been pointed out that the purple patch on Calumny is an echo of Virgil's description of Fame.

Molière's Le Bourgeois Gentilhomme. Edited by T. O. OLIVER.
(2s. Ginn.)

A learned and scholarly edition of the famous play by the Professor of Romance Languages in the University of Illinois. Much of the learning will be thrown away on schools. Thus, there is a page of small type on *trompette marine*, another on the reading "tout ce qui n'est point vers n'est point prose," and a page and

a half on "Barbara Celarent," but this may be skipped; and for young scholars there is an excellent vocabulary which calls attention to archaisms such as Molière's use of "à," "avant," "en."

Lessing's Nathan der Weise. Edited by SAMUEL P. CAPEN.
(4s. Ginn.)

"Nathan der Weise" is not an easy play for school reading. Not only is the text, with its archaic German and idiomatic use of particles, harder than one of Schiller's plays, but to appreciate it some knowledge is essential of the religious movement of the time and the part that Lessing played in the struggle for toleration. With both aspects of the play Prof. Capen deals fully and discreetly. On the parable of the Ring there was little new to be said, but here it is explained why Lessing should have chosen a Jew for his hero, and further how the weakness of the dramatic action is explained, if not justified, by the underlying motive of the dramatist, to expose the vice and folly of bigotry and intolerance. For pupils who can tackle "Nathan" we should have thought a vocabulary superfluous.

First German Reader. Edited by FRIEDA LOUISE MARTINI.
(3s. 6d. Ginn.)

The Reader consists of short anecdotes, mostly humorous, interspersed with simple lyrics and nursery songs. Sometimes Scholastic "jokes with difficulty," but generally the young scholar will be entertained and stimulated to make out the sense. It is curious to find the venerable Joe Miller of the prize poem, "The sun's perpendicular rays," in German, and attributed to Schiller. Now and again a note seems needed: "Nun ist das Holland in Not" (translated in the vocabulary, "Then I'll be up and against it good and hard"), and "dass ein altes Haus einen solchen Einfall hat," "that an old building should have a fancy that would bring down the house"; and "Kaisers halten sich doch ein Mädchen" (without a comment). The book is well printed, and for half-a-dozen of the songs there is a musical setting.

"Heath's Modern Language Series."—*Boit's Peterli am Lift.*
Edited by FREDERICK BETZ. (1s. 6d.)

A pretty little *Dorfgeschichte*, but for beginners the Swiss *patois* is a distinct objection. There is a complete vocabulary, but the notes might be fuller. Thus, on "Sonst hat's ihn Schlimm mitgenommen" we need more than a bare translation, "But in other respects the accident has badly used him up." Will the pupil discover the missing link between this and "mitnehmen" ("to take along") of the vocabulary? In "stehen bleiben durft ich nicht wegen dem Vater" attention is called to the inversion, but at least two other notes are needed.

Die Familie Buchholz. Von JULIUS STRUDE. Edited by G. H. CLARKE. (2s. 6d. Cambridge University Press.)

"The Buchholz Family," Part I, we are told, has passed through eighty-nine editions. It shows middle-class Berlin society as the "Pickwick Papers" showed early Victorian England. This edition gives only the earlier chapters. The broader humour of the *Polterabend* and Frau Wilhelmina's scissors is hardly fitted for schools. Something more, it seems to us, than a vocabulary was needed. Where was the Buchholz house? What is "beer soup," "spirit of mustard," a "Sympathiemittel," "Hunt the Taler"? The vocabulary will not help. So with the modals and particles, like *ja, wohl, nämlich*, so hard to render in English. The Editor doubtless holds that all this is best left to the teacher, and with a competent teacher "The Buchholz Family" is a pleasant variety on the orthodox German reader. There is the usual apparatus of exercises in the text.

Selections from Classical German Literature. By KLARA HECHTENBERG COLLATZ. (7s. 6d. net. Oxford University Press.)

This forms a continuation of the author's "Selections from Early German Literature," and a third volume, dealing with the Nineteenth Century, is promised. We begin with Luther, and a full selection from his "Kirchenlieder," and end with Goethe and Schiller, who occupy between them more than a third of the volume. To each section are prefixed brief sketches of the period and lives of the authors, and in the earlier part archaisms are explained at the foot of the page. In an appendix there is a pretty complete bibliography. The print is good, and we can strongly recommend it as a reading book for the First Class in German.

"Poetry and Life Series."—*Schiller and his Poetry.* By W. H. HUDSON. (1s. Harrap.)

Mr. Hudson is a prolific writer, and two books from his pen were noticed by us last month. Of his "Schiller" we must speak very briefly. For the Series, Schiller is a better subject than Wordsworth, and his life and works are well interwoven. Quotations form a considerable portion of the text—a good Florilegium, but we should have preferred them in translation. Every reader who knows German possesses them or can easily refer to them. Why.

again, is the drama ruled out of court? There is not a single extract, not even Thekla's song, the most perfect of Schiller's lyrics.

Early English Social History. By AGNES F. DODD.
(2s. G. Bell.)

The revolution in history teaching initiated by J. R. Green's "Short History of the English People" has affected more or less every recent school history, and Miss Dodd in this volume attempts to portray from the Anglo-Saxon chronicle Matthew of Westminster, William of Malmesbury, Asser and Bede, social and economic life in England from the Anglo-Saxon invasion down to the end of the Norman kings. The narrative is clear and simple, and the Chronicles are skilfully translated or paraphrased. Apparently it is intended to serve as the textbook for the period, not as a companion volume to the political history. This seems to us a defect. Without tables of dates and maps the pupil will get but a confused notion of the order of events, and we should have much preferred to see the matter arranged under such headings as The King and Court, The Village Community, War and Weapons, Sports and Pastimes, Education, &c. As it is, it is a book rather for the teacher than the class, and it will provide a treasury of telling extracts to vivify the bare bones of the school manual.

The Story of the Roman People. By E. M. TUPPER.
(1s. 6d. Harrap.)

To tell the history of Rome from mythical time to the taking of Constantinople by the Turks in 250 pages is a *tour de force*. A bare outline can profit little except for examination purposes, and what we look for is a picture that will show the place of Rome in the world's history—of Rome in the making: how from a city State she grew to be an imperial power; her national character, laws and institutions, art and literature, religion and morals, and the reasons of her decline and fall, and the debt that we still owe her. This Dr. Tupper has hardly attempted, but he gives us a straightforward narrative of leading events. Of geography, ethnology, language, political philosophy, there is hardly a word, and literature is barely touched upon. The index gives two references to Tacitus, but all we learn of the historian is that he pronounced Nero's gardens more wonderful than his Golden House. The woodcuts are primitive.

A Brief Tudor-Stuart Book-List, by J. S. LINDSEY (2s. 6d., Cambridge, Heffer), is an "alphabetical index to English works of general interest bearing on British History, 1485-1714." It includes source books in the chief original authorities. There is no attempt at discrimination, but the books are classified in a very useful way on pages 25-28 under five heads: General History of Europe, Expansion of Europe, General History of Britain, Tudor Period, Stuart Period. We have noticed a few omissions of books similar to those included by Mr. Lindsey, e.g. T. G. Law's "Conflicts of Jesuits and Seculars," but on the whole the work is well done. A great deal will appear unnecessary to most teachers who use the list, but libraries and tastes vary. It is a pity that Prof. Cheyney's "History of England from the Spanish Armada to the Death of Elizabeth," Vol. I, appeared too late for insertion.

"A History of England." Edited by C. OMAN.—Vol. VII: *England since Waterloo.* By J. A. R. MARRIOTT. (10s. 6d. net. Methuen.)

Mr. Marriott says: "The historian is concerned with the past; truthful narration may be required of him, but not speculation," and in these words he describes his own achievements and limitations in this volume. The book gives in detail the events connected with English history for practically a century; it is a storehouse of facts well marshalled. Within a certain range it will serve as a useful book of reference, and the maps, bibliography, and references enhance its value in this direction. But the work retains too much the savour of a textbook; in a volume of this compass there should be some signs of the philosophy of history. A historian may not be required to speculate, but he should give evidence of an insight that discerns the broad tendencies that continue their growth during a century and that point to certain developments in the future; in that sense the historian is concerned with more than the past. The fact that "the oncoming of democracy and the growth of Empire will to all time distinguish the Victorian era" is clearly indicated, and yet in the sections dealing with India there is not even a passing reference to the mighty civilization, literature, and philosophy of that land. And with regard to democracy Mr. Marriott can say, as though the fact were accomplished, that "not until the beginning of a new reign and a new century did political supremacy effectually pass from the *bourgeoisie* to the manual worker." This presupposes that political supremacy rests with the voters, but in reality it does not at present do so. Mr. Marriott has produced an excellent textbook, and perhaps he did not aim at accomplishing more. But in our opinion there are already too

many history textbooks; what is wanted are comprehensive surveys that will gather the meaning of different movements and explain the history makers to themselves.

Scenic Studies of the Bible Background. By S. M. NICHOLLS.
(3s. 6d. net. Longmans.)

This is a companion volume to Miss Nicholls's "Pictures of Palestine," noticed by us a few months ago. Miss Nicholls is not only a traveller and a photographer, but she has been a teacher of geography and knows how to expound the salient features of a map or a picture. Palestine is here treated in twelve sections, each with its map and one or more pictures. Foot-notes give references to the chapters and verses of the Bible illustrated. George Adam Smith is the chief authority followed, and Miss Nicholls does not lay claim to any original research, but she does not, as in so many books of the sort, state as facts what are mere conjectures, nor is there any attempt at word-painting.

The Poem of Job. Translated by EDWARD G. KING.
(5s. net. Cambridge University Press.)

Dr. King has here given us the Book of Job translated according to the metrical principle expounded by him in "Early Religious Poetry of the Hebrews," i.e. in verses of three (occasionally four) beats and an irregular number of syllables. We quote from a famous passage:—

"In thoughts from the visions of night,
When deep-sleep falls on men,
A fear befell me, and trembling
That put all my bones in fear.
Then a spirit glided before me,
The hairs of my flesh stood erect:
It stood—I discerned not its face;
A form was before mine eyes,
Then a still small voice I could hear."

The effect is somewhat monotonous, but we have no doubt that it echoes the primitive rhythm of the original, and so far is a more faithful rendering than the prose of the Authorized Version or even the Revised Version. Dr. King adds brief and pregnant notes both on disputed readings and versions and also on the characters and parts that they play in the drama. We note that he adheres to the old interpretation of "Goël" in xix, 25, "God the Redeemer," not "the blood avenger." The book is a true help to Bible study.

• *The People's Books.* (Each 6d. net. Jack.)

This series, now entering on its second century of volumes, bids fair to justify its ambitious undertaking "to bring within the reach of all the results of modern knowledge." The editor has been fortunate in securing for each monograph, not only a specialist, but, in many cases, distinguished men of letters and science, whose names, at least, will be familiar to the people. "The People's Books" is an ambiguous title. The price, indeed, is popular—a cloth-bound volume of 50,000 words for sixpence—but the subjects are often abstruse and the treatment scholarly. There is no attempt to popularize in the sense of playing to the gallery by evading or fudging the difficulties and turning the limelight of rhetoric on the attractive features of a subject. We have acknowledged the several volumes as they appeared under "Books of the Month," and it is not possible to do much more in a monthly journal; but we would call special attention to a select few by which we have profited ourselves, conspicuous either by the eminence of the author or the immediate interest of the subject. 1, "Women's Suffrage," by Mrs. Fawcett; 2, "Shakespeare," by Prof. Herford; 3, "Home Rule," by L. G. Redmond Howard; 4, "Syndicalism," by J. H. Hardy; 5, "Ethics," by Canon Rashdall; 6, "Geology," by Dr. G. Bonney; 7, "Buddhism," by Prof. T. W. Rhys Davids; 8, "Trade Unions," by Joseph Clayton; 9, "Henri Bergson," by H. Wilder Carr; 10, "Charles Lamb," by Flora Masson.

Chamber of Commerce Atlas. (6s. net. G. Philip.)

This gives in graphic form an epitome of the commercial geography of the world under present conditions and is a wonderful atlas at the price. As an appendix there is a Gazetteer of India of a hundred pages; by help of abbreviations, a line to each place suffices to show the main points of interest. Thus: "Rouen, manufacturing city, capital of Seine-Inférieure, France; population 118,459; 49.26 N., 1.06 E." We can hardly turn to a map without finding in graphic form some facts of interest, e.g. that the United States have 15,500,000 miles of telephone wires to 1,850,000 in the United Kingdom, and, more remarkable still, that the respective numbers of messages per head in a year are 72 and 12. Smokers will be interested to learn that the Dutchman smokes 7½lb. for every 2lb. of the Englishman. The same map tells us that India, including Ceylon, produces nearly twice as much tea as China, and if the bags of coffee representing the rest of the world's supply were emptied into the sack representing Brazil, the difference in size would hardly be perceived. The maps are generally clear,

but on some of the main sea routes the lines look like a tangle of telegraph wires.

Stanford's Geological Atlas of Great Britain and Ireland Edited by H. B. WOODWARD. Third Edition. (12s. 6d. net.)

The third edition of this standard work has been enlarged by notes on the geological features of the Channel Islands, and the maps have been brought up to date, notably in the case of the Silurian of Central Wales. We need hardly point out at this time of day that it is far more than an atlas. In bulk it hardly exceeds a double number of "Bradshaw," but it will enable the traveller to read the features of the country through which he is passing, and beguile the tedium of the longest journey.

"Cambridge County Geographies." — *Northumberland*. By S. RENNIE HASELHURST. (1s. 6d. Cambridge University Press.)

Northumberland is one of the richest counties in England, if not in actual wealth, at least in varied interests—antiquarian, historical, architectural, and mercantile. To each of these sections Mr. Haselhurst has done full justice, and we have omitted his own special subject, physiography, which is illustrated by telling diagrams. The numerous photographs of scenery, ruins, and buildings, all taken by local artists, form a special feature of the volume.

Guinevere, Jason, and other Poems. By WILLIAM MORRIS. (1s. net. Oxford University Press.)

This volume of "The World's Classics" deserves a special notice among reprints. It has no introduction and needs none. "The Life and Death of Jason" alone, in so attractive a form, for a shilling is an offer that few who have read the great modern epic can resist. Those who do not know it have rare pleasure in store.

CHEMISTRY, PHYSICS, &c.

College Zoology. By R. W. HEGNER. (11s. net. Macmillan.)

This book forms an admirable introduction to the larger treatises, such as the Cambridge Natural History. Rather more than one-third of the 730 pages are devoted to the Vertebrates, the proportions assigned to the various phyla being similar to those in the well known textbook by Parker and Haswell. In fact we have here, roughly speaking, Parker-Haswell abridged to half-size at one-third of the cost. It is therefore a very suitable book for senior classes in schools and junior classes at the Universities. The anatomy and life of the honey-bee is treated, as it deserves, with more than usual fullness. The 553 illustrations have been selected from well known works, are well reproduced, and have been wisely selected for the learner's benefit. Indeed, the author has throughout made skilful use of the most recent and authoritative treatises.

Industrial Chemistry for Engineering Students. By HENRY K. BENSON. (8s. net. Macmillan.)

This book has a special aim, being intended for the use of students in engineering classes at about the middle of their college course. The occurrence, manufacture, and uses of the more important materials, the industrial uses of air and water, fuels and building materials, are treated so as to supply up-to-date information on important details which are omitted from the ordinary textbooks of chemistry. The author has American practice in view, but the work will be found useful in technical institutions in England. The selection of topics is judicious and a large amount of information succinctly given, while carefully prepared bibliographies direct the student to fuller information. The book might be helpful to many science masters for purposes of reference.

A Course of Practical Work in the Chemistry of the Garden. By D. R. EDWARDES-KER. (1s. 6d. Murray.)

Obviously the outcome of the author's experience in teaching horticultural students at Wye, this little book provides a short course of thirty-five practical exercises, all worth doing. Directions are given for carrying out the exercises in the laboratory so as to avoid the usual pitfalls. It supplements, and does not attempt to supplant, the work of the teacher.

Modern Research in Organic Chemistry. By F. G. POPE. (7s. 6d. Methuen.)

This book is too advanced for use as a school textbook; but it should help science teachers who desire to keep up to date in their knowledge of recent work on the constitution of organic compounds.

A Course of Physics, Practical and Theoretical. By C. H. DRAPER. (4s. 6d. Blackie.)

The various branches of physics have all been brought into one volume, and the attempt has been made to combine therein the work of the laboratory and of the lecture room. The arrangement of the subjects and much of the exposition show skill based on experience, but the general impression produced is that too much is attempted. The result is that several explanations will not bear

critical scrutiny—e.g. the formation of dew on grass should not be explained on the radiation theory, which was exploded twenty years ago. The diagram of cyclones is distinctly misleading. In short, the book may be useful in a class where the teacher sets selected extracts to be read and enlarges on those topics; but for our own part we prefer to have less ground covered in a more thorough manner.

Modern Inorganic Chemistry. By J. W. MELLOR. (7s. 6d. Longmans.)

This work can be recommended unreservedly. It is admirably suited for senior classes in schools, or for classes in University and technical colleges. It contains a remarkable amount of information, is thoroughly up to date, and the theoretical discussions are lucid and penetrating. The historical and philosophical aspects are not neglected, and the work is enlivened with a remarkable number of most apt quotations from great thinkers and chemists of every age, from Paracelsus to Poincaré; but we doubt the wisdom of postponing the discussion of the periodic classification until the penultimate chapter.

Sound. By J. W. CAPSTICK. (4s. 6d. Cambridge University Press.)

This is a valuable addition to the "Cambridge Physical Series," and fills a gap of which many teachers have felt conscious. From the nature of the subject the book will be found more difficult than the well known "Heat" and "Light" by Glazebrook. This is not the fault of the style, which is lucid although terse. The work shows a mastery of the theory of musical instruments as well as of physical concepts, and will be of much value to strong students of music or of physics, for the author evidently has the habit of clear, vigorous thinking. We may mention two points of detail where improvement might be made: (1) we would include Cheshire's disk in the account of stationary waves (Crova's has been included); (2) instead of stating that the application of Fourier's analysis requires considerable mathematical attainments (page 151), it would be better to give the beautiful and ingenious method devised by T. P. Nunn for demonstrating the analysis with plasticine models and a balance. These, however, are only suggestions for adding to what are already excellent statements of the ideas of stationary waves and of the doctrines of Helmholtz. The book will be particularly useful to scholarship candidates.

A Textbook on Experimental Plant Physiology. By M. ROLLO MITCHELL. (1s. Meiklejohn.)

The first part consists of simple experiments in plant life, for which very brief directions are given, with diagrams. The second part contains statements of the observations and inferences corresponding to each exercise in Part I. The remainder consists of tabulation pages with blank spaces to be filled in from the pupil's own observation. The obvious danger is that the second part may be used in place of direct observation. We do not like the omission of all formulation of aim or purpose of the experiments, but if the teacher supplies this omission and can make sure that Part II is not misused, the book may be used with advantage by a class preparing for the Local examinations. Some of the attempts at concise explanation are far from happy: the chemical actions involved in starch production, and the theory of osmotic suck, are not really illuminated by the statements on pages 35 and 33.

Elements of Qualitative Chemical Analysis. By JULIUS STIEGLITZ. (2 vols., 6s. each. Bell.)

The main feature of these volumes is the fullness with which the rationale of the reactions is discussed. The author is a strong disciple of Ostwald, and it may be said that this work owes its inspiration to the classical treatise "Wissenschaftliche Grundlagen der Analytischen Chemie." Teachers who desire to base their instruction on the ionization principle will find this book of real help. It may be consulted by scholarship candidates, otherwise it is too advanced for schoolboys. In fact, it well fulfils the purpose for which it was written—viz. to serve as a textbook for University students.

Elementary Biology: Plant, Animal, and Human. By J. E. PEARBODY and A. E. HUNT. (5s. 6d. net. Macmillan.)

This book has been written for boys and girls of about fourteen years of age in American schools, and it approximates more nearly to what we in England call Nature study than to a textbook of biology. Quite properly the authors have subordinated the study of structure to that of function, although the former has not been neglected. The manifold directions in which biological phenomena bear upon our daily life are constantly kept to the front, as, for example, in the interesting account of micro-organisms and their relation to health and disease, both in plants and animals. Much attention is paid in the later chapters to hygiene. In addition to the text, clear and precise instructions for practical exercises are given, and these will be found useful to teachers. The book is excellently printed, and the illustrations, which number nearly three hundred, are very good.

IDOLA LINGUARUM.

MODERN LANGUAGES.
THE DIRECT METHOD: AGAINST.

(Concluded from page 408.)

By OTTO SIEPMANN.

III. If translation is avoided, misconception and uncertainty will follow, and one of the best means of mental training will be lost.

It would certainly be inconsistent with the whole spirit of the Direct Method if translation were admitted. The admission of the mother-tongue in any shape or form must be considered an evil that should be avoided as much as possible. As soon as translation is admitted as a principle, one of the corner-stones of the sanctuary is removed, and the whole structure falls to pieces. And yet translation has always been, and will remain, one of the most important principles of all language teaching. If that is so, as I shall prove it to be, we have here another blow which means death and destruction to the Direct Method. Translation into the mother-tongue is essential, because it is the only way in which the teacher can find out for certain whether a pupil properly understands what he has read in a foreign language. There are other ways of testing this understanding, I admit, but none so infallible. And then there is something else which is of great importance in translation. The pupil has to take in the thought presented in a foreign dress and has to reshape it in his mother-tongue. The Direct Methodists object to this because the process is not direct—*i.e.* the thought of the passage read is not taken in directly from the foreign expression. That is not necessarily true, but even when this is the case there is advantage first in the shaping of the thought in the mother-tongue, and secondly, in showing whether the thought has been fully and accurately understood. The further objection that it is not the modern language master's business to teach the mother-tongue seems to me a grave misconception of a teacher's duties. Some great schoolmaster said truly that every lesson given in a good school in whatever subject must also be a lesson in the mother-tongue.

But the real dread of the Direct Methodist is a spectre which has no substance whatever and exists only in his heated imagination. He firmly believes that translation becomes such a habit that it definitely debars the reader or speaker for ever from taking in a thought expressed in a foreign language without translating it. Experience shows that there is no reason for such a fear. Do what you will, the intervention of the mother-tongue is going to operate at the outset, even when you introduce a pupil to so simple a sentence as "Le chien est fidèle." And that is why the Direct Method is a misnomer, an impossibility. What eventually brings about the direct association between thought and language is familiarity with words and constructions, frequent repetition and long practice. Whether the association was originally direct or indirect does not make the slightest difference. I know plenty of people who speak French and German really well and without dreaming of translating when they speak, although they were brought up on the old system and did translation by the mile before they reached their present proficiency. Translation should not be a bugbear, but a most useful and necessary exercise. "It is vain to decry this exercise, which is one of the most valuable in the whole range of education. Translation, clear, accurate, simple, adequate yet idiomatic, is not only the best test of the knowledge of both idioms, but it as a work of art as well as of science... disciplining the highest powers of insight, skill, and taste, both in thought and expression. There is no other discipline incident to language study so valuable as translation rightly conceived."

As for translation into the foreign language which Prof. Viëtor calls an art that does not concern schools, we must try to understand exactly what we mean by it. Having disposed of the Direct Methodist spectre, that translation

bars direct association, I cannot conceive what valid objections can be raised against this most excellent instrument of training all the faculties of the mind. Prof. Viëtor had no doubt in mind the translation of a classical author, such as Shakespeare or Ruskin. To translate them is certainly a great art. But is there nothing easier than these difficult authors? Is it not possible to shape a piece of prose to almost any degree of difficulty from the easiest upwards? It is a difficult exercise in any case, true enough, but are our pupils not to be faced with any difficulties? I find that from an early stage it is quite possible to demand satisfactory translation into a foreign language by offering pupils passages in close connexion with their reading and vocabulary which present no difficulties that they cannot overcome. From these easy passages—retroversions—we proceed gradually to English passages in their original form, and even attempt (*pace* Prof. Viëtor) suitable pieces from classical authors with varying success, of course. I know of no other exercise that develops a pupil's powers of intellect, imagination, taste, sense of style in the same degree, and which shows more definitely what a boy's knowledge of the foreign language is like. Free composition compared with it is like skimmed milk compared with Devonshire cream.

There are many other points in the Direct Method which I might discuss here, but I refrain. This article has been written in response to an invitation from the Editor, and is already too long. I shall perhaps deal with the question more fully in book-form. I think I have said enough for the present to show that the Direct Method, which promised so much, has disappointed the educational world. It lacks the logical discipline to which we attach so much importance, it is not productive of scholarship, it spends itself in the vain attempt to teach whole classes to speak a foreign language and does not lead us quickly enough to real literature and its great authors who elevate "all the powers of the mind and soul to a beautiful harmony of the inner and outer man." For the elementary stages we must turn to a method which was modestly and clearly sketched by the founder of the Modern Language Association—its present Chairman of Committees, the Rev. Dr. Stuart MacGowan—who, in 1890, said:

(1) The reading of connected texts is the basis upon which a sound practical knowledge of a modern language can best be acquired. (2) Grammar must be brought into connexion with the reading of carefully prepared texts. (3) The Reader must be systematic, *i.e.* it must lend itself to a methodical study of grammar. (4) Another important feature in this Reader would be graduated English passages for translation based upon the grammar and vocabulary just acquired in the foreign text.

And for the higher forms we must seek inspiration from the stimulating articles in *Modern Language Teaching*, by Mr. Stanley Leathes and Mr. Tilley, of King's College, Cambridge. Our task is to show that modern languages can be made a valuable instrument of mental discipline and culture, and to send forth into the world men of character and equipped with a liberal education based on modern languages that can stand comparison with the best type of education to be had anywhere in the world.

THE *Russian Review*, published by the School of Russian Studies in the University of Liverpool, has in its May number an interesting sketch of public instruction in Russia down to the emancipation of the serfs, contributed by Mr. Ivan Klynzhev. Till the reign of Peter the Great schools were entirely seminaries to train for the ministry. Lay schools were first established by Peter, with the object of training for the Army, Navy, and Civil Service. The Empress Catharine first founded lay schools for the people; but these were few in number, ill supported, and confined to the towns. In 1797 there were in all Russia only 227 national schools. In 1802 Alexander I appointed a Minister of Instruction, and under him schools were provided, open to all classes, with graduated classes leading to the University. In 1828 there was a reaction against this democratic measure. Peasants were restricted to the village school, the bourgeois to the district school, and only the upper classes were admitted to the gymnasium. In 1858 the total number of pupils in all Russian schools was under a hundred thousand, and the salaries of teachers ranged from 75 to 145 roubles.

UNIVERSITIES AND SCHOOLS.

LONDON.

The position as regards the site of the future head-quarters of the University has been somewhat clarified by two events of the past month. First, the Government has declared that the diversion of Somerset House from its present purposes cannot be contemplated. This disposes of one of the proposals which have been under consideration. Further, the Senate have adopted a resolution stating that they are of opinion, after consideration of various sites which have been suggested for the head-quarters of the University, that it is undesirable to proceed further with such consideration unless and until H.M. Treasury intimate their willingness "to provide accommodation more suitable in situation, more convenient in character, and on terms not less advantageous as regards tenure, &c., than those attaching to the present occupation at South Kensington." Thus we revert to the *status quo*, and the labours of the Royal Commission are for the moment dissipated into thin air. It would be rash to attempt any ratiocinations as to the ultimate result of much argument about it; but, if we are to wait until the Government are prepared to find the huge sum which entirely new head-quarters would entail, the prospect of any development in that direction does not appear to be very encouraging.

Dr. (now Sir) W. P. Herringham has been re-elected Vice-Chancellor for a third year of office, an unusual proceeding affording high testimony of the respect in which he is held in the University. Lord Bryce is to deliver the Creighton Lecture next session, and Prof. A. W. Crossley has been appointed to a University chair of chemistry tenable at King's College.

Among the colleges there are several signs of activity. Prince Arthur of Connaught has visited the new University School of Architecture at University College, which is stated to be the largest and most complete school of its kind in the United Kingdom. Princess Christian has laid the foundation-stone of the new buildings for the Home Science Department of King's College for Women at Campden Hill. On this occasion, Lord Rosebery, Chancellor of the University, made one of his rare visits to the University and bestowed an official blessing on the new departure, which has for its object to establish household science as a subject of University study.

OXFORD.

The Responsions Statute, after having submitted to a long process of amendments, was thrown out in Congregation by 110 votes to 73. The result is disappointing. The reasons put forward for its rejection were not creditable. It was pointed out that it would cost the University money, but the main argument used was that the smaller colleges could not afford to have the standard of Responsions raised. At the same time, most of the opposition speakers declared that they desired to reform Responsions. That means little. Most opposition speakers in Congregation "want something done, but not anything that anybody else wants done." When the proposal to abolish compulsory Greek was defeated many of the opposition declared their desire to reform Responsions on the ground that the University should lead and not be led by the public schools. Many of the same persons now base their objections to the Responsions Statute on the ground that if the University tries to prescribe a proper standard of general education, it will have no undergraduates. The voting showed how impossible it is to do anything with Responsions until compulsory Greek is out of the way. As long as Greek is compulsory you must have at least three compulsory subjects—mathematics, Latin, and Greek. It seems reasonable to go on and say that if these are compulsory, an English essay ought to be so also. But any such proposals are naturally opposed both by the strong minority who want things kept exactly as they are, and by a considerable number of persons who rightly feel that the University ought to be more accessible to schools of a modern type and see that that can never be done while there are four compulsory subjects, including Latin and Greek. There is something to be said for the position that an examination in stated subjects is bad in principle, that the University ought to be open to any boy of real ability in any subject, but it was foolish to reproach Council for not having brought in a Statute on those lines. Council quite rightly considered itself bound by the decision of Convocation on the Greek question. That means that any proposals of which Congregation are likely to approve will be thrown out by Convocation.

The statute proposing to raise the fees in certain examinations was unexpectedly thrown out in Convocation by a considerable majority. The University still makes a profit on its examinations as a whole, but that profit has been considerably diminished by recent changes

in the fees paid to examiners, with the result that the University is suffering a loss in its income which it can ill afford at present.

The University has suffered a great loss in the death of Sir William Anson. He was an excellent Head of his college. Under his guidance All Souls, whose continued existence used to be thought one of the most obvious scandals in the University, had done great service to University education by its benefactions. He was also an ideal University member. He was, of course, a strong Conservative, but he was more the member for Oxford University than a member of his party. He has been described in some quarters as hating new experiments and disliking University Extension, but he was a warm and generous supporter of the work of the Tutorial Classes Committee, which, in the eyes of some of our Conservatives, is a dangerous and revolutionary movement.

On June 6 Viscount Bryce laid the foundation-stone of the new Presbyterian Chapel for members of the University, and delivered an interesting address showing what a difference there is between Oxford as it is now and as it was when he came into residence soon after religious tests had been abolished. The new chapel is one of the indirect results of the Rhodes scholarships. The strong Presbyterian contingent which has always come from Scotland is now reinforced in large numbers from the Colonies.

On the same day Lord Bryce opened Barnett House, which is intended to be, and is already becoming, a centre for social studies of all kinds. It will be the head-quarters of the Tutorial Classes Summer School, and should prove most useful in co-ordinating all the various social work and studies in the University.

CAMBRIDGE.

NEWNHAM COLLEGE.—The following Fellowships have been awarded: To Miss Costelloe the Mary Bateson Fellowship of £100 for three years; to Miss D. Jordan Lloyd the "N" Fellowship of £100 for three years; and to Miss M. Wheldale an extension of the "N" Fellowship for one year.

LEEDS.

For the last two terms the history of academic politics in this University has been almost a complete blank. Whether the cause is to be found in an absorption of those who direct our destinies with politics of a more general nature or to a temporary failure of the source which has been recently so fruitful of suggestions for the development of our activities it is difficult to say; but the fact remains that for some time neither the Senate, the Council, or the Court has had before it matters of policy sufficiently general to merit discussion in these notes.

There was, however, one alteration of the ordinances passed at the last Court meetings which deserves a word of notice. Last year it was resolved that the subjects of Hebrew and Ecclesiastical History were to be admitted to the course for the Ordinary Degree. There is no instruction given in either of these subjects within the University which has, accordingly, taken the hitherto unusual step of recognizing teaching given without. Certain courses at the Wesleyan College at Headingley and the Baptist College at Rawdon, when given under the conditions prescribed for courses with the University buildings, are to be recognized as part of the curriculum for a degree. The only other teaching given outside those buildings which is so recognized is given by the agricultural department at Garforth; but there it is given by teachers appointed by the University.

In the absence of proposals for constitutional change there is an opportunity for reviewing the work which is actually being done. Never before has the University been so active in research. The investigations of Prof. Bragg have made the Physical Laboratory temporarily the centre of the universe of physics. A new department, headed by a new professor with several new assistants, has been founded to conduct the research on Animal Nutrition, which is financed from the Development Fund. From the same source is derived the money which is supporting the experimental flax-growing station, which represents perhaps the first attempt in this country deliberately to use the scientific resources of a University to start a new industry or, rather, one which has been killed by lack of such resources. And lest it be thought that science, pure or applied, is our only care, the excavations at the Roman Camp at Slack conducted by the classical staff must be mentioned.

The series of public lectures (usually given at the close of the afternoon classes) started last year, have been continued and the list of speakers has been, if possible, even more distinguished. They deal chiefly with the arts of literature, painting, sculpture, and music, and continue to be excellently attended. Complaints are heard that the University is transgressing its proper limits and competing with institutions in the city which already offer such lectures

(Continued on page 500.)

Summer Holidays

PRINCIPALS who have arranged to receive boys during the holidays should send particulars to Mr. J. H. PATON, who has already several inquiries.

143 Cannon Street, London, E.C.

PITMAN'S SHORTHAND TEACHERS' JOINT EXAMINING BOARD.

President—ALFRED PITMAN, Esq.

EXAMINATIONS for the Shorthand Teacher's Diploma of this BOARD are held in the principal cities of the United Kingdom throughout the year. The Diploma is recognized by County Councils and other important Educational Authorities as the highest possible testimony to a Teacher's ability and its possession is, therefore, of the utmost value to Teachers seeking appointments. The Diploma is specified as a qualification by the Department of Technical Instruction for Ireland. Full particulars of the examination, together with a copy of "HINTS TO CANDIDATES," may be had, post free, from the

EXAMINATIONS SECRETARY, PHONETIC INSTITUTE, BATH.

NATURE STUDY AND BOTANY.

Instructive Nature Study cases and specimens for class work, as supplied to the Universities, Colleges, and Higher Grade Schools. Birds, mammals, shells, crustaceans, butterflies, &c., carefully mounted for painting studies.

Lists from

A. FORD, Naturalist, South View, Irving Road, Bournemouth, Hampshire.

Ready August 15th, 1914.

Price 3s. 6d. net; by post, 3s. 10d.

ECONOMICS

FOR COMMERCIAL STUDENTS,
By ALBERT CREW,

Of Gray's Inn and the South Eastern Circuit, Barrister-at-Law; Examiner in Economics for the Union of Lancashire and Cheshire Institutes; formerly Lecturer on Economics to the West Ham Municipal Technical Institute.

ASSISTED BY

J. SWAIN, B.Sc. (Econ.), London, and C. E. HUTCHINS SPENCER, Lecturers on Economics at the Hugh Myddleton Commercial Institute, London, and H. B. WINDER, A.C.I.S., F.R.Econ.S., Principal, Kennington Park Commercial Institute, London.

This Textbook has been written by Lecturers of wide practical experience in Teaching Economics to Commercial Students, and contains a large variety of questions set by various Examining Bodies.

A BOOK ABOUT AUTHORS

Reflections and Recollections of a Book-Wright.

By A. R. HOPE MONCRIEFF,

Author of "The World of To-day," "The Highlands and Islands of Scotland," Black's "Guide to London," &c., &c.

A. & C. BLACK, SOHO SQUARE, LONDON.

(not, however, free of charge), but the view is generally expressed that if such institutions are suffering from the competition it is largely due to the mistakes of their past policy. Moreover, it is very doubtful whether the eminent men who have addressed us would be willing to give so much of their valuable time at the request of any institution less august than a University and doubtful again whether they will continue to be willing if all the Universities follow our example in asking them.

Two developments of our corporate life must be mentioned. The first concerns the students; it is the opening of the new athletic grounds. A recent extension of the tramways has rendered accessible new regions, and here the University has bought and laid out a ground with every advantage of situation, space, and amenity to take the place of the cramped and dismal field which they have occupied previously. The erection of a suitable pavilion awaits only the arrival of the generous benefactor.

The second concerns the staff. It has long been felt that it is one of the great drawbacks of a non-residential University that those of the staff who do not come into contact through their work have so few opportunities of making each other's acquaintance. Some opportunity is afforded by the University refectory, and the scheme of a University club has often been suggested, but not very favourably received. At the end of last term there was organized what, it is hoped, will be the first of a continuous series of meetings of the whole staff for purposes other than the discussion of their work. It was thought necessary that there should be some definite object for the meeting, and accordingly Prof. Gordon was induced to read a paper and open a discussion. He chose as his subject "Some Difficulties of Modern Expression"; he was wisely polemical and, attacking with vigour the linguistic barbarities of the "Scientists," drew so many spirited replies that the discussion eventually had to be closed. Another meeting is being arranged for next term, for all who attended the first were enthusiastic on its success for the purpose it had in view.

DURHAM.

Great changes have been effected at Durham University in the position of its women students. The University took a lead by opening its Senate—the supreme governing body—to women. Convocation, which confers degrees, has now been opened to women on the same terms as men, and there are now some dozen women graduates on that body. The opening of Convocation to women must be attributed to some extent to the efforts of a strong Union of the Women Graduates of Durham and Newcastle, which is doing much good work and promises to be a force of the future in the University.

In the Durham Division of the University a new Principal with high academic attainments was appointed to the Women's Hostel in the summer of 1913. As it is a hall of residence for women close to the heart of a progressive University, where women may attend lectures and take degrees, it offers advantages to those in the North in search of a University education at moderate cost and within easy reach. The Authorities are only waiting till the number of students is large enough to justify their building. We hope, in the course of the next few years, to see the opening of a fitting Hall to welcome our North country women students. There is a near possibility of a woman lecturer for the Durham colleges, the degree courses have been considerably altered and improved, and the number of scholarships open to women greatly increased. Three spacious rooms have been secured for a new women's Common Room, and on the social side—so important a factor in a residential University—women are taking an ever-increasing part in University life. The fact that the June number of the *Durham University Journal* is edited for the first time by a student of the Women's Hostel speaks for the advance they are undoubtedly making and the new responsibilities they are taking up. Much of this has only been possible through a tactful and sympathetic leadership which, besides guiding socially, is making the Hostel live again for those who have "gone down."

VICTORIA UNIVERSITY OF MANCHESTER.

Miss M. A. B. Herford, M.A., who held the Oliver Heywood Scholarship in 1909-11 and a Graduate Scholarship in 1912, has been appointed Assistant in Classics in the University. Miss Herford spent the session 1912-13 in archaeological research at Somerville College, Oxford. Miss Laura Lomas, M.A., late Faulkner Fellow and John Bright Fellow of the University, has been appointed by the Council of Newnham College Assistant Lecturer in Medieval and Modern Language for the session 1914-15. A Fellowship was recently offered to Miss Lomas by the Council of Bryn Mawr College, Pennsylvania, U.S.A. Miss Lomas was resident at Ashburne Hall during part of her University course, and has since studied in Paris and in Brussels. Miss H. B. Howarth, B.A., has been appointed an Assistant Inspector under the Health Insurance Act.

WALES.

The University College of Bangor, like many other Welsh educational institutions, is, unfortunately, face to face with a financial difficulty. At the last half-yearly meeting, the President, Lord Kenyon, directed attention to the deficit of £19,000 on the building fund. The Court had hoped that the new college would be opened free of debt, but they had been misled, and not only is the capital fund inadequate but the annual income will be insufficient for the upkeep. The subscriptions towards the building fund did not come up to expectations, and, so far, the Government grants for the Welsh colleges are far below the average for England. The Treasury grant, as already stated in these notes, in English colleges is £28.8, whereas Wales receives only £22.2 per student. This disparity should be remedied as the result of the quinquennial inspection of the University.

A Students' Representative Council of the University of Wales has recently been formed, with the object of promoting a closer union between the students of three University colleges. It is very desirable that students of the same University, following to a great extent the same courses of study and subjected to a common examination system, should have opportunities for discussion and so realize their unity. A definite constitution has been drawn up, and some suggestions have already been submitted on behalf of the Council to the Senate of the University.

Summer schools continue to be popular. For the month of August eleven have been arranged. The Workers' Educational Association meet at Bangor to discuss economic and social questions. The Welsh Language Society will hold its twelfth course at Christ College, Bangor.

Courses in rural science will be held at Madryn Castle Farm School, and at Welshpool County School. The Glamorgan County Council will have a school of mining, engineering, building, and science at Cardiff University College and Penarth Intermediate Schools, while manual work, Nature study, needlework, and hygiene will be studied at Barry County School.

The Welsh Department has issued a pamphlet strongly recommending the value of intensive study and the educative effect of contact with experts in various subjects at these courses, and urging upon Educational Authorities the desirability of offering as many scholarships as possible for the courses.

On July 28 and following days the Civil Service Commission will hold two special examinations for the purpose of selecting a number of Second Class Clerks and Assistant Clerks for the Welsh Insurance Commission. About thirty Assistant Clerks will be appointed, and six Second Class Clerks. The age limit for the former is seventeen to eighteen, and for the latter twenty to twenty-five, so that graduates of the University may compete.

The Welsh Insurance Commission are stated to be responsible for these new examinations as they are anxious to secure the services of the best boys in the Welsh schools. Unfortunately the commencing salary for the Assistant Clerks is low—£45 per annum—so that many suitable candidates may be deterred from competing. Welsh is an optional subject, though a knowledge of the vernacular should be extremely useful for work under the Commission in Wales.

This Association will meet at Bangor, from July 4 to August 22.

Workers' Educational Association.

The Association is under the auspices of some of the Northern Universities and of the University of Wales. The instruction is mainly by private tuition, and students are placed under the control of a tutor who advises a course of reading and generally supervises their work. The subjects include history, economics, literature, psychology, and philosophy, and well known experts in the different subjects have promised to deliver lectures.

SCOTLAND.

Prof. Musgrove, M.D., has resigned the Bute Chair of Anatomy, to which he was appointed in 1901. The appointment of his successor will be made in September.

St. Andrews.

The University Court has approved the report of a Committee, recommending that a fund of about £500 should be raised for the support of a temporary lectureship in music. It is proposed to redecorate the University Chapel, and Mrs. Robert Mitchell, St. Andrews, has offered £3,000 to the University for this purpose. The Senate has elected Prof. Scott Lang as one of its Assessors on the University Court. At the July graduation the honorary degree of LL.D. will be conferred on the following:—Mr. Lazarus Fletcher, F.R.S., Director of Natural History Department, British Museum; Mr. R. B. Greig, Scottish Board of Agriculture; Mr. Thomas F. Henderson, who has written much on Scottish history and biography;

A Handbook of Geography

By A. J. HERBERTSON, M.A., Ph.D.

Vol. I—General Geography, The British Isles
and Europe. 4/6

Vol. II—Asia, Australasia, Africa, and America.
4/6

This work is designed for the use of Students in Pupil Teachers' Centres, Training and other Technical and Professional Colleges, the Highest Classes of Secondary and Evening Schools, the Junior Classes of Universities, and also for Teachers. The work contains nearly 200 Maps and Diagrams.

NELSON'S School History of Great Britain and Ireland

By G. W. PROTHEROE, M.A.

2/6

NELSON'S SCHOOL HISTORY is the most complete History Text-Book ever published for Schools. It is a History not merely of England, but of the British Isles and the British Empire. Forty-eight historical pictures by well-known artists have been reproduced in this volume.

NELSON'S Cameos of Literature

Cloth, 1/- each.

Vol. I—Some English Essays. Selected and edited by RICHARD WILSON, B.A. 256 pp. Pott 8vo. Beautifully Illustrated.

Vol. II—The Harp of Youth. A Book of Poetry for School and Home. Edited by W. JENKYN THOMAS, M.A. 288 pp. Pott 8vo. Beautifully Illustrated.

Vol. III—The Gleeman. A Book of Stories in Song. Edited by RICHARD WILSON, B.A. 288 pp. Pott 8vo. Illustrated.

Vol. IV—A Book of English Prose. Literary Extracts arranged in chronological order from Malory to Thackeray. Edited by W. JENKYN THOMAS, M.A. Pott 8vo. Illustrated.

THOMAS NELSON & SONS, 35 & 36 Paternoster Row, London, E.C.

PARKSIDE WORKS, EDINBURGH.

Dr. Arnold F. Rolleman, Professor of Chemistry, University of Amsterdam; Baron F. von Hügel; and Mr. W. J. MacDonald, M.A., for thirty years Mathematical Master in Daniel Stewart's College, Edinburgh.

Glasgow. The tramway enterprise of the Glasgow Corporation has caused a good deal of anxiety to the University. It was proposed to run electric tramways in University Avenue, but the University succeeded in its opposition to this, on the ground of the inevitable disturbance of delicate magnetic and microscopic investigations by electric currents and vibration. On the other hand, the University was unsuccessful in its opposition to the building of a bridge for tramway traffic through the grounds of Queen Margaret College. It is not yet settled whether it will be necessary to remove the College to another site. Unfortunately it is hardly possible to find a suitable site in the neighbourhood of the University. As Sir Donald MacAlister remarked in his address at the recent graduation, the decisions of the House of Lords Committee in their present form can hardly satisfy either the City or the University: "So careful of Rob Roy they seem, so careless of the Royal Saint." Commemoration Day was celebrated on Tuesday, June 23. Emeritus Professor Sir Hector Cameron delivered an oration on Lord Lister, honorary degrees were conferred, and the Commemoration Dinner was attended by about two hundred members of the University. The Chancellor, Lord Rosebery, presided at all the functions. Mr. W. R. Halliday, Lecturer in Greek History, has been appointed to the Rathbone Chair of Ancient History at the University of Liverpool. Mr. John S. Armour, M.A., of Glasgow University, has been appointed to the Professorship of English in Patna College, Bankipur, India. Mr. John Shaw Dunn, M.A., M.D., has been appointed Director of the Clinical Laboratory in the Western Infirmary and Lecturer in Clinical Pathology in the University.

Aberdeen. The Medical School has suffered a severe loss through the death of Dr. George Dean, Professor of Pathology in the University. He was appointed to the Chair in 1908, on the resignation of the late Prof. Hamilton. Prof. F. R. Japp has intimated his resignation of the Chair of Chemistry, to which he was appointed in 1890. He has done admirable work both in teaching and in research, and there is universal regret that he has decided to retire. Lord Elgin is to be installed as Chancellor of the University on July 8, the day of the summer graduation. The University Court has approved the plans for the extension of the Library and the erection of an examination hall at King's College. On June 18 Mr. Andrew Carnegie presided at a dinner of the Aberdeen University Club, London. In course of his speech he discussed and defended the work of the Carnegie Trust in connexion with the payment of fees. He mentioned that the total sum granted by the Trust for fees amounted to £534,000, and he expressed great satisfaction that £2,813 had already been repaid to the Trust by beneficiaries.

Edinburgh. Prof. Donald Mackinnon, who has held the Chair of Celtic Language and Literature since 1882, and Prof. James Geikie, D.C.L., LL.D., who has held the Chair of Geology for over thirty years, have intimated their intention to retire at the end of the present academic year. A joint Advisory Committee of the University and the Heriot-Watt College has prepared a draft scheme for the institution of a B.Sc. degree in mining engineering. Sir John Simon, the Attorney-General, has been adopted at Liberal candidate for the Rectorship. Mr. James Drever, M.A., has been appointed Lecturer in Education, and Mr. James M. Graham, M.B., Ch.B., has been appointed Lecturer in Surgical Pathology.

Royal Technical College. An anonymous donor has offered to give £10,000 as an addition to the endowment of the Royal Technical College, Glasgow, provided that other contributions amounting to not less than £15,000, are promised within one year. The income of the endowment is to be devoted to the strengthening of the staff in order to enable the College to undertake more research work in aid of the development of local industries. The Governors of the College have resolved to institute a new chair of Geology, and they have approved a draft ordinance for the institution of a B.Sc. degree in applied chemistry at Glasgow University.

Provincial Committees. At the request of the Joint Committee of the four Provincial Committees, the Directors of Studies have prepared a report, in which the present system of training is compared with the pupil-teacher system, and suggestions are made for remedying some defects in the present system. The report points out that it is not yet possible to pass judgment on the merits of the new teacher, as teachers trained under the new system in the full sense did not begin to enter the schools in any considerable numbers until session 1912-13. But the Directors of Studies are of opinion that the new system is superior to the

old, except possibly in respect of skill in the exercise of discipline. Even in this respect "the evidence tends to show that the new teacher is likely to be more successful in the end. But it is not clear that he is more successful at the end of his course of training." The report recommends (1) that the fitness of candidates for admission to the teaching profession, in respect of health, character, and intelligence should be scrutinized more closely before they are admitted as junior students; (2) that the time given to practice in teaching during the junior student course should not be diminished and that the practice should include an adequate amount of responsible and continuous class teaching; and (3) that continuous class teaching for several hours daily during at least three weeks should be undertaken by students in full training, and that the session for two-year students should be extended to thirty-five weeks at least. The report has been approved by the Glasgow Provincial Committee. The Edinburgh and Glasgow Committees have prepared a joint report on the question of the salaries of the staff of the training colleges. There has been prolonged correspondence with the Education Department on this question, and the position of the Department is rather difficult to understand. In proposing the institution of scales of salaries, the Department stated that the size of the training centres should be taken into account in determining the scales. Afterwards the Department issued a uniform scale for all the centres, irrespective of their size; and finally, on remonstrances being made, declared that the "size of the departments had been taken into account." The Secretary of the Education Department is to be asked to receive a deputation from the two Committees.

Secondary Education Congress. The fourth Secondary Education Congress was held at Glasgow University, on May 22 and 23. Mr. Ramsay Macdonald, M.P., gave an address on "The Place of Secondary Education in a National System." He maintained that "elementary education only prepared for education." He believed that the great training ground for life was at the level of secondary education and not above it. Every school should have enough secondary work to do to make it a real educational institution. Mr. J. H. Jones, Lecturer on Social Economics at Glasgow University, dealt with "The Economics of Teachers' Salaries." He said that the result of the unrestricted operation of the forces of demand and supply was that the teaching profession was probably the worst paid of all. The case for a national minimum salary was overwhelmingly strong, and the method of securing it was to insist on a definite apprenticeship. Sectional meetings were also held in English, science, history, art, mathematics, classics, modern languages, and geography. Mr. Robert Dickson, M.A., Head Master of Dalry School, Edinburgh, has been elected President of the Educational Institute of Scotland.

IRELAND.

The Board of Trinity College met on June 8, for the purpose of electing a Fellow and Scholars. The Fellowship was awarded to Mr. James Maxwell Henry. Mr. Henry, a former pupil of Campbell College, Belfast, distinguished himself both in Mathematics and classics throughout his college career, and gained the Mathematical Studentship at his graduation in 1909, with a double Senior Moderatorship in Mathematics (large gold medal) and Logic and Ethics. The Madden Prize and a special premium of £60 fell to Mr. Henry Wilkins Burd, while the remaining four candidates received Fellowship Premiums. Fourteen Scholarships (one non-foundation were awarded, five for mathematics, six for classics, one for experimental science, and two for modern literature. The second place in modern literature fell to a woman student.

The students celebrated the occasion with their usual high spirits, both inside and outside the College; but on this occasion the fun overstepped due bounds. Although the College Authorities had taken the wise precaution of locking the gates, a large number succeeded in getting out. In their progress through the streets they raided the offices of the Women's Social and Political Union in Clare Street and carried off a flag; then they forced an entrance into the Mansion House, and hoisted the suffragette flag on the roof there, where it floated for over an hour—a good omen, let us hope. There were similar raids on the Theatre Royal and the offices of the Irishwomen's Franchise League. As a consequence of these pranks ten of the ringleaders were arrested and had to pay fines and damages in the Police Courts, and one was rusticated.

The annual Festival Service was held in the College Chapel on Trinity Monday afternoon, when the Rev. Canon Hannay delivered an address on the life of the eighteenth century divine, Philip Skelton, who was an alumnus of Trinity.

On June 12, Mr. Birrell's Bill for improving Irish intermediate education was read a second time in the House of Commons, and its author made an interesting speech, in which he showed sympathy with the difficulties of Irish secondary education, and acknowledged

(Continued on page 504.)

MILLS & BOON'S NEW BOOKS.

MILLS & BOON will be happy to receive applications for Specimens from Heads of Schools and Teachers of special subjects. Applications should state the number of copies that will be required if the book asked for is introduced.

EXAMPLES AND TEST PAPERS IN ALGEBRA.

By W. J. WALKER, M.A., Head Master of Woodhouse Grove School, Apperley Bridge, Bradford. With Answers, 3s.; without Answers, 2s. 6d.; and in two volumes each 1s. 6d. with Answers, or 1s. 3d. without Answers.

A new Algebra which is far more than a mere book of exercises, and contains many features that will interest teachers of algebra by modern methods.

THE MERCHANT OF VENICE.

With revised Text, Questions, Notes, and Appendices. By G. H. BALL, M.A., Head Master of King Edward School, Camp Hill, Birmingham; and H. G. SMITH, B.A., English Master at the same School. 1s. Text only, 6d. net.

This edition has been based on the recommendations of the Board of Education, and will be found suitable for students preparing for the Oxford Local, Cambridge Local, and College of Preceptors Examinations.

OUTLINES OF APPLIED PHYSICS.

By H. STANLEY, B.Sc., Lecturer in the Merchant Venturers' Technical College, Bristol. With 75 Diagrams. 2s. 6d.

This book is intended as a companion to a lecture course and contains a résumé of the leading principles of physical science, omitting purely descriptive work. Worked examples, varying in standard from Upper School to Intermediate degree work, are given throughout; a set of questions is appended to each chapter, and a collection of over 300 miscellaneous examples is added at the end of the volume. Answers are supplied.

A REFORM FIRST GERMAN BOOK.

By J. STUART WALTERS, D. ès L., Modern Language Master at Wilson's Grammar School, London, S.E. With 5 Pictures by Hölzel in colour and 2 in monotone. 3s.

A REFORM FIRST FRENCH BOOK.

Especially written for the use of Adult Students. By J. STUART WALTERS, D. ès L.

Although necessarily somewhat more restricted in its scope than is its German confrère, this book will be found to meet the requirements both of the New Method and of the various examining bodies.

Here again especial stress has been laid on the vitality of language as applied to **daily life**. The pupil is taken to France and made to realize some at least of those interesting minor differences of habit and custom which underlie the great essential similarities of the two countries.

DIRECT METHOD FRENCH TEXTS

Edited by R. R. N. BARON, M.A.

"We welcome another publisher starting a series of Direct Method French Texts, and congratulate him on his editor, who has performed his task in a way which will please every reform teacher. They are well suited for use in schools. We wish success to this new Series."—*School World*.

TAMANGO and JOSE MARIA LE BRIGAND. By PROSPER MÉRIMÉE. Second Edition. 1s.

PIERRILLE. By JULES CLARETIE. Second Edition. 1s. 6d.

BUG JARGAL. By VICTOR HUGO. 1s. 6d.

LA BELLE NIVERNAISE. By ALPHONSE DAUDET. 1s. 6d. (Set Book for the Middle Grade Irish Intermediate Examination, 1915.)

EXERCISES IN FRENCH FREE COMPOSITION FOR UPPER CLASSES.

By R. R. N. BARON, M.A., French Master Cheltenham Grammar School. 185 Exercises. Fourth Edition. 1s. 6d.

POETRY FOR BOYS.

By S. MAXWELL, M.A., Head Master of Manor House School, Clapham Common. 1s. 6d.

A collection of poems of established literary merit and of such a kind as will naturally appeal to boys. Printed in large type to meet the requirements of the British Association Report.

"Such is the superiority of Mr. Maxwell's collection over every other similar kind of work we are acquainted with, that not the least apology is due for its appearance. The selections have been made with a fine discernment of what will appeal to the interest of boys."—*Secondary Education*.

NOTES ON THE GOSPEL ACCORDING TO ST. MATTHEW.

With Questions and Concordance for the Use of Schools. By the Rev. C. R. GILBERT, M.A. With 3 Maps and an Illustration. Crown 8vo. 1s.

FIRST SCHOOL BOTANY.

By E. M. GODDARD, B.Sc., Science Mistress, Girls' Secondary School, Colchester. With 207 Diagrams. Crown 8vo, 2s. (Union Series.)

This book is designed to provide a sound scientific training in Botany for the Middle Forms. The life and structure of the plant are dealt with side by side, and the experiments which can be performed by ordinary classes follow one another in logical sequence.

The book covers the syllabus of the Oxford and Cambridge Junior Local Examinations.

MEISTER MARTIN.

Edited, with Introduction and Reform Method, Notes, by L. HIRSCH, Ph.D., German Master, Allevn's School, Dulwich. 1s. 6d.

The first volume of a new series of Direct Method German Texts.

FRANCIS CHANTREY: DONKEY BOY AND SCULPTOR.

By HAROLD ARMITAGE, Author of "Sorrelsykes." Illustrated by Charles Ashmore. 1s.

A wholly delightful reader, giving a sketch of the life and work of Sir Francis Chantrey, the milk boy who modelled the statue of the Duke of Wellington opposite the Royal Exchange, and the Sleeping Children in Lichfield Cathedral. Mr. Armitage writes with spirit, and he is a master of vigorous phrase-making. He gives many romantic details about his boyhood, and tales about him and his donkey that are particularly attractive to children.

LATIN EXTRACTS FOR SIGHT TRANSLATION.

With Hints to Beginners. By G. H. BALL, M.A., Head Master of King Edward's School, Camp Hill, Birmingham. 1s.

These passages are arranged so as to present examples of various grammatical constructions in regular sequence. Part II contains parallel passages to illustrate and amplify the constructions that pupils meet with in their ordinary reading.

THE NEW PRELIMINARY GEOGRAPHY.

By H. B. WETHERILL, M.A., Head Master of Allahabad High School. Third Edition. With Illustrations and 19 Diagrams. 1s. 6d.

New Educational Catalogue, with portraits of Authors, post free from

MILLS & BOON, LTD., 49 RUPERT STREET, LONDON, W.

that it did not get its fair share, or any share, of the grants which went to secondary education in other parts of the United Kingdom. The chief points in the Bill are noted by you elsewhere.

The part of the scheme which has been modified, no doubt in order to secure its acceptance with the Catholic head masters, is that relating to minimum salaries. As it originally stood the minimum was fixed at £120 for men, £80 for women. Now Mr. Birrell has found that though "it may be desirable to fix a minimum salary, it is practically impossible." It seems, however, to an outsider as if the fixing of a minimum salary would be the most effective guarantee that the money did ultimately find its way to the pockets of the teachers; and surely the modest sums named ought not to be impossible under any circumstances.

The Report of the Committee of Inquiry into National Education continues to receive attention, and was discussed at some length in the General Assembly of the Presbyterian Church, which was held during the month in Belfast, by the newly elected Moderator, the Rev. Dr. Bingham. According to Dr. Bingham, Presbyterian managers in the North are prepared to give favourable consideration to any equitable system of local public control. Dr. Bingham also spoke of the necessity of a chair of education in the University of Belfast and a training college in the City for primary and secondary teachers.

Irish education has lost an active worker through the death of the Rev. Canon Andrew Murphy, Parish Priest of St. Munchin's, Limerick, on June 18. Canon Murphy was a student and a teacher and deeply interested in all questions relating to education. He was secretary to the Association of Clerical Head Masters and editor of the *Irish Educational Review*. He was also a prominent member of the Classical Association, with the inception of which he had a good deal to do.

SCHOOLS.

DULWICH COLLEGE.—Mr. Gilkes has sent in his resignation of the Head Mastership, to take effect at the end of the term. Mr. Gilkes was educated at Shrewsbury School, and, after taking his degrees at Oxford, where he gained a First in Classical Moderations and Greats, he was appointed by Mr. Moss to an assistant mastership in his old school, a post which he held for twelve years, till in 1885 he succeeded Dr. Welldon as Head Master of Dulwich. His whole life

has been devoted to his school, and eschewing educational politics he has endeared himself to generations of Dulwich boys. His sole relaxation has been literary composition. In Socratic dialogues and other romances he has given to the world his ideals of public-school life.

ELTHAM COLLEGE.—Mr. George Robertson has been appointed to the head mastership in succession to Mr. W. B. Hayward. Mr. Robertson, after a distinguished career at Oxford, where he gained the Craven and Ireland Scholarships, was appointed Professor of Classics in the Grey University College, Bloemfontein.

HARROW COUNTY SCHOOL.—The summer camp has commenced, and already fifty or sixty boys have had a week under canvas on the school field.

REPTON.—The Rev. Geoffrey Francis Fisher has been appointed to the Head Mastership in succession to the Rev. W. Temple. Mr. Fisher was educated at Marlborough, whence he obtained a scholarship at Exeter College, Oxford. He took a First in Classical Moderations, Greats, and also in Theology. In 1908 he rowed in the winning boat of the trial eights. Since 1911 he has been an assistant master in Marlborough College.

RUGBY.—Speech Day on June 20 was abandoned in consequence of an extensive outbreak of mumps.

SUNDERLAND, BEDE COLLEGIATE BOYS' SCHOOL.—Numbers are growing, in spite of the inadequate premises. A new site has been purchased, and plans of buildings to accommodate six hundred boys are now being advertised for. Two additional masters—Mr. Nicholas Back, B.A., late Foundation Scholar of Downing College, Cambridge, and Mr. H. R. Clement, B.A., late Scholar of University College, Aberystwyth—have recently been appointed. Mr. A. E. Hodgson, B.Sc., for twelve years a most efficient master in the School, died suddenly on Christmas Day. His successor is Mr. S. A. White, M.A., late Mathematical Scholar of University College, Oxford. Mr. H. B. Widdows, Senior Classical Master, after nine years' excellent service, will leave at midsummer, having been appointed (from among 302 candidates) Head Master of Whitley Bay and Monkseaton High School for Boys. The Governors last month improved the Salaries Scale framed in 1905, raising the maximum salary of assistant masters from £200 to £250.

WINTERSDORF, BIRKDALE LADIES' COLLEGE.—G. D. Mason, a pupil of the Birkdale Ladies' College, has been classed as a Wrangler in the Mathematical Tripos, Part II.

STORIES BY PROF. A. J. CHURCH.

"The Headmaster of Eton (Dr. the Hon. E. Lyttelton) advised his hearers, in a recent speech at the Royal Albert Institute, to read Prof. A. J. Church's 'Stories from Homer,' some of which, he said, he had read to Eton boys after a hard school day, and at an age when they were not in the least desirous of learning, but were anxious to go to tea. The stories were so brilliantly told, however, that these young Etonians were entranced by them, and they actually begged of him to go on, being quite prepared to sacrifice their tea time."

THE SCIENCE OF EDUCATION.

THE FUTURE OF EDUCATION. By S. CLEMENT

C. EGERTON. Crown 8vo, 3s. 6d. net.

In this volume Mr. Egerton reviews the pressing educational problems of the day, and endeavours to forecast the probable development in the near future.

WHAT IS EDUCATION. By STANLEY LEATHES,

C.B. Crown 8vo, 2s. 6d. net.

Mr. Stanley Leathes, formerly Fellow and Lecturer in History at Trinity College, Cambridge, and one of the editors of the *Cambridge Modern History*, is now engaged in directing public examinations. He here uses his long and wide experience to treat of education as a whole, physical, moral, spiritual, intellectual: education for business, education for life: education by life, education by the State: the education of all, of the many, of the few.

MONTESSORI PRINCIPLES AND PRACTICE.

By E. P. CULVERWELL, M.A., Fellow and Senior Tutor, Trinity College, Dublin: Professor of Education, University of Dublin. Crown 8vo. With many illustrations and a Portrait of Dr. Montessori. 3s. 6d. net.

"Professor Culverwell has approached his task with sympathy and understanding, but always in the scientific spirit. His book shows us the physiological basis upon which the Montessori psychology is constructed in a clearer and more scientific manner than the authoress herself. It forms an important contribution to Montessori literature, and to pedagogics in general."—*Morning Post*.

THE PATH TO FREEDOM IN THE SCHOOL.

By NORMAN MACMUNN, King Edward VI School. Crown 8vo, 2s. net.

An application of Montessori principles to the needs of secondary education, in which Mr. MacMunn gives details of a system of teaching by Partnership between pupils which he has found to be very successful in his own classes. He has already applied his system to the teaching of French with marked success, and other textbooks are in preparation.

JUST OUT. 260 pages. 2s. net. JUST OUT.

—A NEW—
GEOMETRY
 for **SCHOOLS.**

BY **GEORGE LAWSON,**
 RECTOR,
 WAID ACADEMY, ANSTRUTHER.

The book presents the ordinary modern school course in Plane Geometry.

The introductory work on Concepts and Definitions, and the section at the end of Book I on Constructions, use of squared paper, heights and distances, field work, and on parallels in Geography and Astronomy, together make up an experimental and intuitional course, intended either to precede the theoretical course or to accompany it.

The difficulties of the learner are kept in view throughout. A notable feature of the volume is its admirable collection of riders and deductions.

The book suggests two changes:—

The first is a new proof of the 3-side congruence, simpler than the ordinary proof.

The second change is that new proofs, easier than the ordinary ones, are given of the fundamental theorems in ratios of lines, angles, and areas.

CORRESPONDENCE.

THE TEACHERS' SERVICE AT ST. PAUL'S.

To the Editor of The Journal of Education.

DEAR SIR,—It was with keen delight that I anticipated taking part in the service held in St. Paul's Cathedral for members of the teaching profession on May 21. The idea of all grades of teachers, young and old, meeting in common fellowship to express the feeling of aspiration, and so gather further inspiration, in the pursuit of their work appealed strongly to me, and I looked forward to a bright service breathing forth thanksgiving for the blessings which had come to the veterans in their store of happy memories, and for the novices a glimpse of the joy which should be theirs in after years, with hints of difficulties to be overcome by the way.

But I must confess to grievous disappointment. In the place of bright, hearty singing the slowness became increasingly insupportable; although seated among training-college students, from whom one would expect to hear a large volume of sound from their fresh, youthful voices, a subdued "mewing" was all that could be heard. The chosen hymns seemed wide of the purport—one calling the workers to their high ideals and another begging for continued blessing would have been more appropriate. The service, to be joined in by teachers of various modes of thought, should not include the "Belief," while the omission of the General Thanksgiving suppressed one of the best prayers for the occasion. The address was suitable only to students in Church of England training colleges.

Surely this should have been an occasion quite apart from all doctrinal theology, and the service such as could be joined in heartily in its general spirit by every teacher, Jew or Gentile, in London.

But, on leaving the Cathedral and moving westwards, I paused with a friend to take in anew the truth of Watts's vision of reality clothed in glorious colour: the figure of Justice with flaming sword following inevitably in the wake of man's path through life, judging his thoughts and deeds as long as Time and Death hold sway. And, finally, through the western doors streamed in the clear light of sunset sky, filling one's mind with its calm beauty; and there followed the thought of another of Watts's pictures—"Love Triumphant over All"—and one felt that words were but poor, and did not matter.—I remain, yours faithfully,

A LONDON TEACHER.

PRIZE COMPETITIONS.

The Translation Prize for June is awarded to "Dane."

The winner of the Translation Prize (Verse) for May is H. E. G. Evans, Esq., St. Mary's House, Tenby.

The winner of the Translation Prize (Prose) for May is Miss Annie J. Arnott, Clydesdale Bank House, Airdrie.

Cromwell mourut dans la plénitude de son pouvoir et de sa grandeur. Il avait réussi au delà de toute attente, bien plus que n'a réussi aucun autre des hommes qui, par leur génie, se sont élevés, comme lui, au rang suprême, car il avait tenté et accompli, avec un égal succès, les desseins les plus contraires. Pendant dix-huit ans, toujours en scène et toujours vainqueur, il avait tour à tour jeté le désordre et rétabli l'ordre, fait et châtié la révolution, renversé et relevé le gouvernement dans son pays. A chaque moment, dans chaque situation, il démentait avec une sagacité admirable les passions et les intérêts dominants, pour en faire les instruments de sa propre domination, peu soucieux de se démentir pourvu qu'il triomphât d'accord avec l'instinct public, et donnant pour réponse aux incohérences de sa conduite l'unité ascendante de son pouvoir. Exemple unique peut-être que le même homme ait gouverné les événements les plus opposés et suffi aux plus diverses destinées. Et dans le cours de cette carrière si forte et si changeante, incessamment en butte à toute sorte d'ennemis et de complots, Cromwell eut de plus cette faveur du sort que jamais sa vie ne fut effectivement attaquée; le souverain contre lequel était écrit le pamphlet, *Tuer n'est pas assassiner*, ne se vit jamais en face d'un assassin.

By "DANE."

Cromwell died at the zenith of his power and greatness. He had achieved his ambitions beyond all expectation—far in advance of those who, like him, attained the highest rank by force of their genius, in that he essayed and carried out with uniform success schemes utterly opposed to each other. For eighteen years he was the central figure on the stage, conquering and to conquer. He overthrew and again restored order; started and quelled the Revolution; overturned, and again re-established, the government of his country. At every step, in every crisis, he disentangled, with won-

ALBEMARLE STREET, LONDON, W.

derful judgment, the threads of dominating passions and interests, using them to secure his own supremacy: careless whether his acts were contradictory so long as his triumph was assured in accordance with public sentiment, and meeting all charges of inconsistency in his conduct with the unchecked progress of his ascendancy. He is, perhaps, the sole example of a man who could control events of such diverse import, and stand fully equipped to fulfil the most contrary destinies. Though he was, throughout his great and ever-varying career, constantly exposed to all manner of foes and intrigues, Cromwell had the crowning good fortune to escape any serious attempt on his life. The ruler who was the object of attack in the pamphlet, "Killing is no Murder," never found himself face to face with an assassin.

We classify the 210 versions as follows:—

First Class.—Which? Town, Dane, Emil, Menhir I, Gigadibs, Eod, Wiccamicus, Sorrel, Spero, Ancilla, Oðdels, Gaudeamus, Menevia, Allobroge, Jane.

Second Class.—Sirach, Ardeonaig, S.M.M., Fortes et Fidelis, Jo-Ker, Aiglon, Kennanmore, Iverna, Aquae Solis, W.H.S., E.A.B., W., Chingleput, Ellis, Keblah, J.P.S., Outis, Cabra, Boz, Nancy, Special, Woodlands, H.M.M., In Utrumque Paratus, Swinford, Nessko, St. Pierre, Galway, Horatio, Soufflet, Asor, E.A.B., Chislehurst, Clodoald, J.S., Evansdale, Buntie, Respite finem, Fortune le veut, M.S.C., B'ham, Nil desperandum, San Sebastian, Remus, Hebrew, Aurelius, Felicia, Beltrees, Yvetot, Maj, S.W.L., Pointdextre, Spitzbergen, Gustave, A.R., Gothicus, E.W., K.M., Noll, Nibtidard, T.J.P., X.Y.Z., Campitello, Mergy, Clova, Artegall, Competitor, Weston, Laure Bourzès, H.M., Torquillstone, J.S.G., Belvesee, M.G.Q., K.D.F., Melton, Katharine Ken, Sportsman.

Third Class.—Zéolide, Laddie, Einsam, Groarto, S.P.B., L.D.C., E.W., B.T.D., Perrichon, M.A., W.E.M., Thistle, Travailleur, M.A.H., Beowulf, Poggi, H.J.C., M.P., Hilika, Ultimus, M.C.R., Piocheuse, M.E.F.R., Worplesdon, Sirach 2, Postcard, Robin, W.N., E.M.M.D., A.M.C., E.C.D., Johnny, à sec, E.A.P., Moriendo vivo, Langdon, Studierende Frau, La Bohème, Barbe-Bleue, Rowena, Délirée Caudeille, Mirabelle, Omega, Megalith, Kidi, Enterprise, E. de J., A.B., Karl, Morekill, A.M.N., Aylmer Strong, Audax, X., Saxone, B.K.B., Viscountess Buttevant, Institutrice, Eglise, T. J.

Fourth Class.—Oakthorpe, Glockenblume, E.S.S., D.G.P., L.H.W., H.C.S., Fairfax, P.Z. 122, Constante, F.W.J., Homo, Nishur, Sunbeam, D.E.H., Paresseuse, Excelsior, Bandello, Chissleumchookies, M.P.S., C.M.D., C.F., C.H., Ann, Conata, Konstanz, M.O.—R, Carrots, L.D.M., Cherry, Sweet Mam'selle, Une bonne Bouleuse, L.M.L., Astyanax, Lyra.

Fifth Class.—Dr. G., Bagan, Jason, Carrig, R.F.H.W., H.W.M., Penton, M.M.H., Rissole, Libra, O.P., J.P.T., Cuna, Lulu, Ripon, Parachute, Merlin, L.L.A., Puella.

This passage from Guizot was set in the last examination of the Scotch Education Department for Higher School Certificates. What the candidates made of it we cannot tell, but it proved sufficiently difficult to test the powers of our adult candidates, unlimited for time and able to consult dictionaries. As in last month's comments, the figures indicate the line of the text. 1, "When he died, Cromwell was at the zenith of his power and greatness." This is better than "Cromwell died in the fullness," &c. Not his death, but his greatness, is the point to be emphasized. 2, "His success had surpassed all expectations—a success unapproached by any one of his rivals for fame, the men of genius, &c." This avoids the cumbrousness of "much more than any of those men had done." 5, "Conflicting" rather than "contradictory" or, worse, "adverse." 6, "To the fore," "before the public" are weak, and "in the limelight" is too modern a phrase. "In the van" matches best with "victorious." 7, "Sown broadcast," "spread abroad," "fomented." The context should have shown that "cast down" cannot be the meaning. "Made a revolution and then held it in check," not "punished the rebels." 9, "In every critical situation he could diagnose with marvellous sagacity the trend of public opinion and the passions of the hour." 13, "In answer to the charge of inconsistency he could point to the undeviating path by which his supremacy had been attained." It is only by a paraphrase that the full force of *l'unité ascendante* can be given. *Ascendante* expresses not only the upward progress, but the ascendancy, and *l'unité* not only the consistency of his policy, but the autocracy to which it led. This was the crux of the passage, and my solution does not pretend to be more than an *à-peu-près*. 19, "Seriously." "With any great success" is absurd. Sexby's tract, "Killing no Murder" was not known by all.

(Continued on page 510.)

PROSE PASSAGES

Chosen by JAMES BROADBENT MARSHALL, B.A.,

Honoursman in English.

Crown 8vo, 176 pp. ... published 1s. 6d. (Postage 3d. extra).

The compilation of this book was primarily suggested by the fact that, for some time past, a number of examining bodies have regularly set prose passages from standard English authors for reproduction as exercises in **Composition**, or to be taken down from **dictation** as tests of Spelling. The book provides, in convenient compass, an ample supply of just the right material needed for preparing pupils to pass such examination tests successfully.

It is designed also to serve as an **aid to the study of English prose literature** from the sixteenth century to the nineteenth; and, to this end, the one hundred and sixty-three passages, here put together in approximately chronological order, have been chosen as typical of the styles of their several authors. The range of authors—from Sir Walter Raleigh to George Borrow—and also of subjects is a fairly large and representative one; and pupils intelligently using this book will obtain a **first-hand acquaintance with a goodly number of the best English prosewriters.**

DUSMO

The Dustless Sweeping Powder

By Appointment

to H.M. The King

AN OFFICIAL TRIAL,
in any School throughout the Empire, for one month, free
of cost or obligation to purchase, will be granted.

DUSMO COMPANY, LTD.,

11 QUEEN VICTORIA STREET,
LONDON, E.C.

THE accompanying illustration of Dusmo B (Lydus), in use in a leading London Warehouse, clearly shows the small quantity necessary.

The line of powder was sufficient to sweep three gangways 40 feet long.

The floors of the above Warehouse have not been scrubbed for 18 months, and are perfectly smooth and clean.

There is now a very marked absence of that stuffy dusty smell.

There is every reason why you should use "DUSMO"—no reason against it, for it is cheaper and far better than damp sawdust.

A Prize of Two Guineas is offered for the best translation of the following passage from Novalis :—

Einst da ich bittre Thränen vergoss, da in Schmerz aufgelöst meine Hoffnung zerrann, und ich einsam stand am dürrn Hügel, der im engen, dunkeln Raum die Gestalt meines Lebens barg; einsam, wie noch kein Einsamer war, von unsäglicher Angst getrieben, kraftlos, nur ein Gedanke des Elends noch:—wie ich da nach Hülfe umherschaute, vorwärts nicht konnte und rückwärts nicht, und am fliehenden verloschnen Leben mit unendlicher Sehnsucht hing:—da kam aus blauen Fernen, von den Höhen meiner alten Seligkeit ein Dämmerungsschauer, und mit einemmale riss das Band der Geburt des Lichtes Fessel. Hin floh die irdische Herrlichkeit, und meine Trauer mit ihr, zusammen floss die Wehmuth in eine neue, unergründliche Welt; du Nachtbegeisterung, Schlummer des Himmels kamst über mich: die Gegend hob sich sacht empor, über der Gegend schwebte mein entbundener, neugeborner Geist. Zur Staubwolke wurde der Hügel, durch die Wolke sah ich die verklärten Züge der Geliebten. In ihren Augen ruhte die Ewigkeit; ich fasste ihre Hände, und die Thränen wurden ein funkelndes, unzerreissliches Band. Jahrtausende zogen abwärts in die Ferne, wie Ungewitter. An ihrem Halse weint' ich dem neuen Leben entzückende Thränen.—Es war der erste, einzige Traum, und erst seitdem fühl' ich ewigen, unwandelbaren Glauben an den Himmel der Nacht und sein Licht, die Geliebte.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by July 16th, addressed "Prize Editor," THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C."

Those in the First Class are entitled on application to a copy of "Essays, Mock Essays, and Character Sketches."

Translations sent with an addressed and stamped envelope and six penny postage stamps will be returned corrected. Foreign postage stamps are not accepted.

Translations will not be returned unless both these conditions are complied with.

HOLIDAY COMPETITIONS.

Prizes to the amount of Ten Guineas are offered for the following competitions:—

DRAWING.

1. A black-and-white illustration of any ballad.
2. A landscape in water-colours, with motto "Divini otia ruris."

PHOTOGRAPHS.

1. A set of five kodaks representing "Our Village" or "A Day in the Country."
2. A group of children.

LITERARY.

1. Critical notes on Gray's "Elegy." Limit, 250 words.
2. "An overworked Assistant Mistress has been ordered by her doctor rest and change. If some kind lady will supply the means for a month's travel on the Continent (say £30) she will in return furnish her benefactress with a series of racy letters describing her adventures."—[Advt.] A specimen letter. Limit, 400 words.
3. A dialogue between a Froebelian and a Montessorist. Limit, 400 words.
4. A translation into English of five (or fewer) epigrams in Greek, English, French, or German. Limit for the whole, 50 lines.
5. A recipe for "A Faultless Dominie." (The well known recipe for "A Blameless Prig," ending "Keep in a cool barge for future use," may serve as a model.)

All competitions must reach the Office not later than September 16. Photographs, except of prize winners, and drawings will be returned if accompanied by a stamped and addressed envelope or wrapper.

An Indispensable Handbook for Parents.

CAREERS FOR OUR SONS.

A PRACTICAL HANDBOOK TO THE PROFESSIONS AND COMMERCIAL LIFE.

BY

GEORGE H. WILLIAMS, M.A. (Oxon.).

Fourth Edition, Revised throughout and Enlarged, and now issued in Black's Series of Reference Books.

PRICE 5/- NET. (By post, 5 5.)

"Careers for our Sons" has already met with a gratifying reception from a large number of parents, guardians, and schoolmasters, who by means of it have been enabled to solve that ever difficult question, "What to do with our Boys"?

It cannot be denied that the surest path to success is a special training with a definite object in view: granting this, the parent is again confronted with the problem of expense, and it is especially important to him to have exact information in this respect. It was to help him to meet such difficulties that Mr. Williams compiled this book, which has been hailed by those competent to judge as by far the best publication of its kind. Within its covers may be found the fullest information as to training, cost, and remuneration in all branches of activity.

A. & C. BLACK, Soho Square, London.

HORLICK'S MALTED MILK

MALTED BARLEY, WHEAT, and MILK in Powder Form

The wholesome nutrition of pure rich milk and choice malted grain, supplying strength and vigour, with little tax on digestion. Instantly ready for use by stirring briskly in hot or cold water.

NO COOKING REQUIRED.

Equally useful to both

TEACHERS AND SCHOLARS.

A glass of "Horlick's" is an ideal lunch, as a delicious and nourishing food-drink may be easily prepared in a moment. **Keep a bottle in your desk.** Horlick's Malted Milk will be found to supply the strength and energy so necessary during the long hours of study, and its use will prevent lassitude.

An efficient corrective of insomnia, taken hot before retiring.

HORLICK'S MALTED MILK LUNCH TABLETS.

A delicious food confection, to be dissolved in the mouth. Especially useful during study for exams.

In Glass Bottles, 1/6, 2/6, 11/-, at all Chemists and Stores. Liberal Sample, either in Powder or Tablet Form, for trial free by post on request.

HORLICK'S MALTED MILK CO., SLOUGH, BUCKS.

GEORGE PHILIP & SON, Ltd.,

will be most happy to submit any of the following for inspection if desired.
Lists of Wall Maps, Globes, Geographical Apparatus, and Text-Books on Application.

Comparative Wall Atlases

Europe, British Isles, Asia, Africa, N. America (others in preparation).

Edited jointly by J. F. UNSTEAD, M.A., D.Sc., and E. G. R. TAYLOR, B.Sc. Arranged in sets of eight for COMPARISON: to show the chief facts of geographical phenomena—Relief of Land, Winds, Rainfall, Temperature, Vegetation, &c. Size, 43 by 33 in. Unmounted, singly, **2s. 6d.**; on cloth, dissected and eyeletted, singly, **3s. 6d.**; cloth, rollers and varnished, singly, **4s.** Sets **21s.** and **27s. 6d.**

The Europe and Africa sets are particularly useful for OXFORD LOCALS work.

Miniature Coloured Facsimile of the Europe set free.

Wall Atlas of Modern History

Eight attractively coloured Wall Maps designed to illustrate those great changes in Political Geography which have characterized the main periods in the modern history of Europe.

The Wall Atlas forms a supplement to the School and Students' Editions of **Phillips' Historical Atlas**.

COUNTY OF LONDON.

THE LONDON COUNTY

COUNCIL invites applications for the position of ASSISTANT MISTRESS to teach German and either History or Mathematics at the County Secondary School, S. Hackney.

Commencing salary £120 to £170, according to previous experience, rising to £220 by yearly increments of £10.

Candidates must have passed a Final Examination for a Degree held by a recognized University and have had experience in Secondary Schools.

The candidate appointed will be required to start work if possible in September 1914, but in any case not later than January 1915.

Applications must be on forms to be obtained, with particulars of the appointment, by sending a stamped addressed foolscap envelope to the Education Officer, London County Council, Education Offices, Victoria Embankment, W.C., to whom they must be returned by 11 a.m. on Wednesday, 8th July. Every communication must be marked "H 4" on the envelope.

Canvassing, either directly or indirectly, will disqualify. No candidate who is a relative of a member of the Advisory Sub-Committee of the School is eligible for appointment.

LAURENCE GOMME,

Clerk of the London County Council.
Education Offices, Victoria Embankment, W.C.

COUNTY OF LONDON.

THE LONDON COUNTY

COUNCIL invites applications for the positions of ASSISTANT MISTRESSES at the County Secondary School, Sydenham:—

- (a) ASSISTANT MISTRESS to teach Classics and English.
- (b) ASSISTANT MISTRESS to teach History; subsidiary subject English.
- (c) ASSISTANT MISTRESS to teach English; subsidiary subject History.

Candidates must have obtained Honours in a Final Examination for a Degree held by a recognized University, and must have had good Secondary School experience. Ability to take part in games will be an additional recommendation. Any of these Mistresses may be required to give part of her time to the County Secondary School, Forest Hill, which is under the same Head Mistress and is to be amalgamated with the County Secondary School, Sydenham.

Applications are also invited for the position of—

- (d) ASSISTANT MISTRESS at the County Secondary School, Clapham, especially qualified to teach English. Ability to teach History would be an additional qualification. Candidates must have obtained Honours in English in a Final Examination for a Degree held by a recognized University.

In each case the commencing salary will be from £120 to £170, according to previous experience, rising to £220 by yearly increments of £10. Applications must be on forms to be obtained, with particulars of the appointment, by sending a stamped addressed foolscap envelope to the Education Officer, London County Council, Education Offices, Victoria Embankment, W.C., to whom they must be returned by 11 a.m. on Thursday, 9th July, 1914, in the case of (a), (b), and (c), and 16th July in the case of (d). Every communication must be marked "H 4" on the envelope.

Canvassing, either directly or indirectly, will disqualify for appointment. No relative of a member of the Advisory Sub-Committee of the School is eligible.

LAURENCE GOMME,

Clerk of the London County Council.
Education Offices:
Victoria Embankment, W.C.

The Training of a Working Boy. By Rev. H. S. PELHAM, M.A. With a Foreword by the BISHOP OF BIRMINGHAM. Illustrated. 3s. 6d. net.

SATURDAY REVIEW.—"Such a book as this was wanted, and should be carefully read by those whose inclination lies in the way of helping the boys of the town."

GEOGRAPHY.

A Junior Geography of the World. By B. C. WALLIS, B.Sc. (Lond.), F.R.G.S., &c. With Coloured Maps and Illustrations. 2s. 6d. *[Macmillan's Practical Modern Geographies.]*

THE GUARDIAN.—"... this, too, we can very heartily praise for the excellence and lucidity of its arrangement, and for the high quality of its colour maps and numerous illustrations."

The Pupils' Class-Book of Geography, England and Wales. By ED. J. S. LAY, Author of "Constructive Work," &c. With 20 Maps. Sewed 4d. Cloth 5d.

MATHEMATICS AND SCIENCE.

Exercises in Mathematics. By DAVID BEVERIDGE MAIR, M.A., sometime Fellow of Christ's College, Cambridge. With Answers and Hints, 4s. 6d.; also without Answers and Hints, 3s. 6d.

EDUCATION.—"The examples are some of the best we have seen for a long time. . . . We cordially recommend the book."

Practical Mathematics for Technical Students. Part I. By T. S. USHERWOOD, B.Sc. (Lond.), A.M.I. Mech.E., and C. J. A. TRIMBLE, B.A. 3s. 6d.

SCHOOL WORLD.—"We heartily commend this book to all teachers of practical mathematics."

Key to Hall's School Algebra. By L. W. GRENVILLE, M.A. Complete. 10s. Also Parts I, II, and III. 6s.

Test Papers in Elementary Algebra. By CLEMENT V. DURELL, M.A., Assistant Master at Winchester College. 3s. 6d.

THE A.M.A. CIRCULAR.—"The papers are in sets of ten, classified according to subject; they should prove very useful for revision work."

A Treatise on Differential Equations. By A. R. FORSYTH, Sc.D., LL.D., Math.D. Fourth Edition, thoroughly revised. 14s. net.

A First Book of Chemistry. By W. A. WHITTON, M.Sc., Illustrated. 1s. 6d. *[First Books of Science.]*

The Theory of Relativity. By L. SILBERSTEIN, Ph.D., Lecturer in Natural Philosophy at the University of Rome. 10s. net.

MUSIC.

Orchestration. By CECIL FORSYTH, M.A. Edin. 21s. net.

"Being a New Volume of 'Musician's Library,' which is issued in conjunction with Messrs. Stainer & Bell, Ltd."

THE TIMES.—"Mr. Forsyth gives us here a detailed treatise on the instruments of the orchestra, which is probably the largest in the English language. He discusses the instruments under the four headings of percussion, brass, woodwind, and strings, prefaces his discussion with a table showing the compass of every possible and impossible instrument . . . and, what is most important for students of orchestration, he illustrates their sound singly and in combination by innumerable examples from musical scores."

PHILOSOPHY.

Greek Philosophy Part I. Thales to Plato. By JOHN BURNET, LL.D. 10s. net. *[The Schools of Philosophy.]*

The History and Theory of Vitalism. By HANS DRIESCH, Ph.D., LL.D. Translated by C. K. OGDEN. Revised throughout and in part re-written by the author for the English edition. 5s. net.

MACMILLAN & CO., Ltd., ST. MARTIN'S STREET, LONDON, W.C.

NEW BOOKS.

Botany, Junior. By Prof. F. CAVERS, D.Sc., F.L.S.,
2s. 6d. [Ready September.]

For use in lower forms of schools.

German Course, Direct. By H. J. CHAYTOR, M.A.
2s. 6d. [Now Ready.]

For beginners of twelve and thirteen years of age.

History of England, Preliminary. By M. K.
ELLIOTT and M. S. ELLIOTT, B.A. 2s. [Ready July.]

For the use of beginners and pupils in schools of the ages of ten to thirteen.

Mathematics for Technical Students, A First Course in. By A. H. STUART, B.Sc., and P. J. HALER, B.Sc.
[Ready September.]

Suitable for use in Evening Continuation Schools and Technical Classes.

Plant and Animal Biology, First Course in.
By W. S. FURNEAUX. 2s. [Now Ready.]

For use in lower forms of schools.

Experimental Psychology in its bearing upon Education, An Introduction to. By C. W. VALENTINE, M.A., D.Phil., Lecturer in Experimental Psychology to the St. Andrews Provincial Committee for the Training of Teachers, and Assistant in Education to the University of St. Andrews. 2s. 6d. [Ready July 5th.]

University Tutorial Press Ltd.,

25 HIGH STREET, NEW OXFORD STREET, LONDON, W.C.

A DIRECTORY OF EDUCATIONAL ASSOCIATIONS

will be found in the MARCH issue of "THE JOURNAL OF EDUCATION," price sixpence, post free eightpence, a paper "indispensable to all school and college reading-rooms in these islands."—*Westminster Gazette*.

IS This "DIRECTORY," which extends over fifteen columns of the paper, has been corrected to date by responsible officials. It includes (a) number of members; (b) amount of annual subscription; (c) name of "organ"; (d) telegraphic address; (e) telephone number; (f) date and place of next annual meeting; (g) secretary's name and office address.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

THE PROBLEM OF EFFECTIVE SCHOLASTIC ADVERTISING — AND ITS SOLUTION.

Consult pages 513 and 534, or apply to

Messrs. J. & J. PATON, 143 Cannon St., London, E.C.,

for a Booklet, which will be sent post free to
Principals of Schools.

[Messrs. PATON'S Telephone Number is 5053 Central.]

LITERARY TEACHING IN FRANCE AND GERMANY.

By NOEL D. WILLIAMS.

MANY useful suggestions for English teaching can be gained from French and German schools, where literary training occupies an honourable place, and many pitfalls can be avoided from a study of French and German results. A glance must first be thrown at the school plan.

Secondary education at French *lycées* is divided into a four years' course, called the first cycle, from the sixth to the third class, for boys between the ages of about eleven and fifteen; a three years' course, the second cycle, from the third to the first class, ending in the first part of the examination for the *baccalauréat*; and finally a one year's course in Mathematics or Philosophy, ending in the second part of the *baccalauréat*.

French is the chief subject for boys in the first cycle. Whether their work is predominantly classical or scientific, at least six hours a week out of twenty-three are devoted to French teaching.

In the second cycle French remains one of the three chief subjects. There are at least four French hours a week out of twenty-eight. French is dropped after the first part of the *baccalauréat* has been taken, at the average age of seventeen.

In German schools the native language takes the third or fourth place in the school plan. Three hours a week out of twenty-five are given to German in the lowest form of a *Gymnasium* or *Realgymnasium*, and three out of thirty in the other forms. In *Oberrealschulen* one hour more is given to German in all classes.

The written section of the German *Arbiturientenexamen*—leaving-school certificate—contains a German essay, in which all candidates must pass.

In the written section of the first part of the French *baccalauréat* one-third of the total number of marks are given to the French essay. In the oral section, which is taken only if the written section has been passed, a passage, chosen at random from one of the standard authors read in the school, is given to the candidate, and he must criticize it from a stylistic and grammatical point of view. English examiners will notice one excellent feature in the *baccalauréat*: it tests the powers of analysis and of self-expression acquired by the boy through years of training rather than a knowledge of facts that could be crammed up in a short time.

The chief characteristic of French literary teaching is a passion for analysis, grammatical, stylistic, and psychological. Grammatical teaching is often characterized by conservatism of method, as Latin, Greek, and French are generally in the same hands. In the lower forms the master often takes a passage that has already been studied from a literary point of view, and asks the boys to separate it out into its various clauses, and to divide the latter into their component parts. Then follows an exercise in parsing, the formation of words with the same root or suffix as a word in the text, and the building up of clauses to contain given constructions and parts of speech. In the lowest class, containing boys of about eleven years old, the following exercise was set on the thirteenth fable of the sixth book of La Fontaine's fables:—

1. Write out the plan of the fable.
2. Explain the exact significance of *un manant*, *le loyer*, *le foyer* (give the usual sense of this word), *à l'entour de son héritage*, *de ce mérite*.
3. What shades of meaning do the words *d'hiver*, *transis*, *perclus*, *rendus*, add to the context?
4. Explain the etymological meaning of *ressuscite*, *l'âme*, and give five words of the same family as the latter.
5. Parse *le (prend)*, *quel (sera)*, *le chaud*.
6. Show how *charitable* and *peu sage* announce what follows.
7. What do you think of the moral of the fable?

But the most striking side of French teaching is the analysis of the word-painting of great stylists and of the rhythm of their speech, where each word is put in exactly the right place with supreme effect. Some notes taken of a

typical hour given in the Fifth Form to boys of about twelve years old will show the excellence of this method. The passage discussed was the last part of that terrible and dramatic description from "Les Misérables" of the engulfment of a man in the quicksands.

Le voilà dans le sable jusqu'au ventre ; le sable atteint la poitrine ; il n'est plus qu'un buste. Il élève les mains, jette des gémissements furieux, crispe ses ongles sur la grève, veut se retenir à cette cendre, s'appuie sur les coudes pour s'arracher à cette gaine molle, sanglote frénétiquement ; le sable monte. Le sable atteint les épaules ; le sable atteint le cou. La face seule est visible maintenant. La bouche crie, le sable l'emplit ; silence. Les yeux regardent encore, le sable les ferme ; nuit. Puis le front décroît, un peu de chevelure frissonne au-dessus du sable ; une main sort, troue la surface de la grève, remue et s'agite, et disparaît. Sinistre effacement d'un homme.

First, the boys had to read the passage aloud, for the master regards good reading as the most essential part of an explanation. Most of them read with expression, but all were criticized. One boy read the passage too monotonously. The master explained that the incidents from "il élève les mains" to "sanglote frénétiquement" form a progression. The man is becoming wilder and wilder, and the voice must be raised to express increasing desperation. "Then," said the master, "you must let the voice sink until the word *silence* is reached. If you have read the passage well, you will not have to speak this word at all, only to shape your mouth to it. Everybody will know what is coming ; they will all be waiting for the only possible word that could close the gradation. You must pronounce *le sable* in a slow and measured tone. The continued repetition of these two words gives an impression of inexorability that is often produced by monotony. Inexorable time is measured by the monotonous beats of the pendulum."

"We may compare the life of this man to a flame burning high on the sands. It sinks gradually, but flares up from time to time. The man's last look is the last spurt of flame. You must lengthen out *encore* in 'les yeux regardent encore,' in order that we may feel how the eyes are vainly searching the horizon for help. If we consider the passage 'Les yeux regardent encore, le sable les ferme ; nuit,' we shall see that these wonderful periods are stages in the life of a man. Each clause is shorter than the one before, according as less life remains above the sands, according as the flame sinks and is extinguished in the single word *nuit*."

When the boys had read the passage, the master illustrated his remarks by a perfect reading of it. Then followed a detailed analysis, from which a few points are given, the question and answer form being dropped, for the sake of shortness. The boys had to point out the emphatic words of each sentence. In the first clause *le voilà* and *ventre* are the most important words. *Le voilà* transports us to the Norman quicksand, and the whole scene takes place before our eyes. In a similar way Victor Hugo closes "Les Pauvres Gens," a poem in "La Légende des Siècles," by showing us two sleeping children. "Tiens, dit-elle, en ouvrant les rideaux, les voilà." *Ventre* explains the stage which the action has reached.

"Il élève les mains." The raised hands are signals of distress to a possible rescuer, and at the same time the expression of an impulse to keep as much as possible above the terrible sand. The man feels that, even if his head were covered, he could still live by his hands.

"Jette des gémissements furieux." *Gémissements* is the important word. A groan in contrast to a yell—the word *hurlements* had been used in a previous sentence—is a dull, despairing sound. Exhaustion has set in.

"Crispe ses ongles." The last effort of a man who is struggling for life. *Crisper* has the same root as the Latin *crispus*, which gives *frisé* (curly) in French. "Crisper les doigts" means to turn the fingers so as to resemble curly hair. The boys give other words with the same root—*crispation*, *le crépe*, *crépé*, *crépu*, and the connexion between them is explained.

"Veut se retenir à cette cendre." The effect of this sentence lies in the antithesis between *se retenir* and *cendre*.

"Sanglote frénétiquement." *Sanglote* marks a new stage in the action. A sob is hardly audible in comparison with a groan or a yell. A boy was asked to explain the exact sense of *frénétiquement*. He had to go to the board and write down a ladder of adjectives, each of which expresses a more violent degree of movement than the last. *Prompt, vif, violent, brutal, emporté, furieux, frénétique* was the result. *Frénétique* gives the most rapid and ill regulated degree of movement, akin to madness.

The analysis was continued on the same lines ; but enough has probably been given to show that the aim of the method is the comprehension of fine shades of meaning, of clever word placing, of the value of figures of speech ; in short, of the architecture of language. A knowledge of literature is subsidiary to this aim.

The point of view is illustrated by an incident. A Government circular on the dangers of consumption and on the precautions to be taken against it by the boys was brought to the form master. Finding it excellent French, he devoted the hour to its analysis.

This kind of criticism is the best mental training, and has a high practical value. It enables boys to distinguish thoughtful eloquence from platform oratory, the touches of poetic imagination from rhetorical ornament, and helps them to express their thoughts simply, clearly, and gracefully.

The effect of this teaching is seen in the French compositions that are written in the lower classes. On one occasion the same form master gave his boys a short outline of the arrival of a travelling acrobat in a village. They had to write the story in their best French, filling in the setting and the details from their experience or imagination. Most of the results were remarkable for clearness and simplicity of style. Many boys had evidently seen the acrobat's cart. Keen observation is responsible for the following description:—

La voiture était petite pour loger tout ce monde, ses petites perrières ne tenaient plus, le toit était troué en maints endroits. La porte, à laquelle il manquait un battant, restait ouverte à tous les vents. Le cheval, attaché à un platane non loin de la roulotte, faisait peine à voir ; ses os saillaient sur son dos et l'on voyait qu'il n'en pouvait plus.

Another boy writes in a more developed style ; he has evidently profited from his French reading :

Seule une roulotte, trainée par un vieux cheval, écopé et maigre, dont chaque pas semble être le dernier, s'avance lentement et grince lamentablement. Derrière ce triste attelage marchait d'un air morne et las une femme et des enfants nus pieds.

The conclusion of the story, which is quite wonderful for a boy of thirteen, shows the beginnings of psychological analysis :

Quand le soleil pâlit, et que les laboureurs, la pioche et la pelle sur l'épaule, reviennent des champs en devisant gaiement, le saltimbanque va prendre son vieux tambour, puis il s'en va tristement faire l'annonce du spectacle en pensant aux déceptions si fréquentes qui l'attendent ce soir. Sa famille habillée de ses défraîchies de représentation, est maintenant réunie au complet autour de la marmite et mange en silence le maigre repas. Triste préparatif pour une soirée de travail.

The last sentence, slightly emended to "Tristes préparatifs d'une soirée de travail," would have made a perfect ending. May it not have been inspired by Victor Hugo's "Sinistre effacement d'un homme" in the passage read by the boys a few weeks before ?

In the higher classes the temperaments of authors are examined by an analysis of their work, and they are classified into different schools. As it is impossible to read even the most important books of many authors, extracts characteristic of their style are discussed once or twice a week. The master gives a short account of the life of an author, and explains, with reference to a few extracts, his mental characteristics and the action and reaction between his ideas and those of his time. This method can easily degenerate into cramming, for the boy, having no real knowledge of the author, must take on trust much that the master says. A teacher who has a thorough knowledge of Mme de Sévigné can easily show, from a single passage, her love of Nature,

her affectionate disposition, her keen observation and powers of realistic description, but the boy cannot form a sound opinion of her temperament from a few carefully chosen extracts.

But the judicious use of the book of selected extracts does not impair the claim of French literary criticism to be a splendid logical training. That it may become hard and cold, however, is a danger inherent in the difficulty of producing enthusiasm in boys by rigid analysis. As the aim is to get at a writer's brain by dissection, sympathy and enthusiasm for a particular author is discouraged, and indifference is often the result. Many Englishmen's interest in literature dates from calf loves contracted at school, which no amount of unbiased analysis could have replaced.

The analytical school of French literary criticism is well represented by M. Lanson, who can distil the quintessence of any writer with diabolical skill, but is apparently indifferent to all. The best English critics, however, from Lamb to Chesterton, are full of prejudice and violence and power to inspire us with love for their favourites. Another danger in French education is the passion for abstract and general ideas, that helps us to explain the difference between English and French institutions. It explains "The Rights of Man," and the abstract and general principles of liberty, equality, and fraternity proclaimed by the Convention. How different were Cromwell's local and concrete reforms! It explains the universal nature of French literature. Anybody who knows French can understand Rostand's "Cyrano de Bergerac," or a novel by Anatole France; but "Kipps" and "Candida" are national and concrete. They require an intimate knowledge of English life. The French *lycées* to-day are managed on general principles. Each boarder receives a weighed portion of meat for dinner without reference to his particular appetite. Similar ideas inspire the teaching. In the Seventh Form, for example, "instruction civique," including "le sens des mots *citoyen, soldat, armée, patrie, commune, canton, département, nation*, et les idées morales qui s'y rattachent," is given to boys of ten and eleven years old. In the Fourth Form philosophical notions are explained to boys of thirteen. On one occasion the exact meanings of the words *pensée, image, idée* were discussed. Perhaps this teaching partly accounts for the good grasp of general principles possessed by many French boys. A premature introduction of abstract ideas into teaching is, however, most dangerous, as can be seen from the essays in the higher classes, which often form a sad contrast to the excellent little compositions already mentioned.

In Germany, however, there is a hopeful movement for leaving the choice of subjects to the boys. The German reformers do not set a theme to the whole class, but encourage the boys to write, whenever they are in the mood, on things that they have seen and been impressed by, or on subjects in which they are interested.

This system is said to work almost too well; the teacher is flooded with stories and essays to correct, of which an interesting collection is given in Jensen and Lamszus' "Der Weg zum eigenen Stil" (Alfred Janssen, Berlin). Most of the subjects are taken from everyday life: A Visit to the Dentist's, Washing Day, The Orange Woman. Though faults of grammar are not uncommon, nearly all the compositions are refreshing for their simplicity and realism. One boy gives us a faultless description of a house painter at work, of which a great novelist could be proud; another a charming conversation in dialect across a shop counter. A few of the older boys, who are interested in books and theories, put their ideas into good prose without padding or sententiousness. The contrast between German and French methods of teaching is the result of fundamentally different points of view on education. The best German teaching, with its passion for *Anschaulichkeit*, considers boys as temporarily complete. The fields of interest and experience at particular ages may be compared to concentric circles of varying radii. Nothing must be taught a boy that is outside the scope of his comprehension at the time. In France boys are regarded as imperfect beings, whose minds are like a spiral ending in

manhood. The best teaching, a little beyond their comprehension, accelerates the curvature of the spiral and makes them men as quickly as possible.

This study of literary teaching must be completed by a glance at the teacher himself. The French teacher of literature is generally far better fitted for his task than his English colleague. He has given more time to the study of his native language, and he realizes that literature is perhaps the most valuable and certainly the most difficult subject in education. In England literature is not taken too seriously. It is taken for granted that a classical man can teach it; in his absence it may be entrusted to the teacher of geography or geometrical drawing. None the less, our literature, at once so concrete and so fairly like, is essentially fascinating to boys. Many an underpaid and overworked master has taught it with love, and been rewarded by enthusiasm.

Without fear we may assert that, if four or five hours a week were given to English in schools, if English teachers had a thorough knowledge of their language, of its literature, and of the methods of teaching it: if they borrowed some of the French theories of literary analysis, avoided the dangers of excessive abstraction, and added love to their work; if, finally, examinations were constructed which abolished the necessity for cramming by testing critical ability and powers of self-expression rather than a knowledge of facts, English would become the most valuable and interesting subject in education.

ASSOCIATION OF HEAD MISTRESSES.

THE fortieth Annual Conference was held at the Redland Hill School, Clifton, on Friday and Saturday, June 12 and 13, by invitation of the Head Mistress, Miss E. Shekleton. Over 200 members attended. The afternoon of Friday was occupied with private business and the reception and adoption of reports of representatives and sub-committees. Miss GADESSEN moved a resolution welcoming the Report of the Departmental Committee on the Superannuation of Teachers, affirming that the pension therein proposed would prove of the greatest importance in organizing a national service of education, and urging the Government to lose no time in giving administrative effect to the scheme recommended.

Report of the Royal Commission on the Civil Service.

The following resolutions were proposed by Miss OLDHAM (Stratford Hill High School) and seconded by Mrs. BRYANT:—

1. That this Conference regrets the decision of the Royal Commission on the Civil Service to recommend—(a) the exclusion of women from the competition for higher posts (Class I examination); (b) the maintenance of the hard-and-fast rules as to (i) compulsory retirement in all cases on marriage, (ii) the segregation of women employed in Government Departments, (iii) rigid differentiation between the classes of Women Typists and Women Clerks.
2. The Conference also dissents from the statement that women are inferior to men in (a) power of sustained work, (b) adaptability to varying conditions of service, (c) continuity of service, save in so far as compulsory retirement on marriage (affecting only 3 per cent. of Civil Service women annually) renders continuity of service impossible.

The resolutions were supported by Miss BURSTALL (Manchester), Miss HANBIDGE (London), and other speakers. An amendment moved by Miss FAITHFULL (Cheltenham), expressing appreciation of the Commissioners' consideration for the work of women, and hoping that the case of married women would be treated individually, was lost, and the resolutions were carried with the deletion of the clauses referring to the inferiority of the work of women.

In the evening there was a Reception at the University of Bristol.

SATURDAY.

The PRESIDENT desired to give the Conference an opportunity of correcting the false impression conveyed by the vote of yesterday deleting those sections of the resolutions which challenged the Report of the Commission as regards the inferiority of women's work. Those who had voted in favour of the omission did so, not because they agreed with the report, but because they wished some positive statement substituted.

A resolution was then brought forward by Miss OLDHAM, and car-

ried unanimously, affirming that at present there were not sufficient data for a comparison, as women were not admitted to the higher posts of responsibility, and in the mechanical work allotted to them they had little scope for showing their capacity.

Miss ROBERTSON then gave her Presidential Address :—

What I purpose to do this morning is to take the most important happenings of the last year, and to try to set them in what appears to me to be their true perspective.

Local Associations.

For our Association the most important event has been the formation and recognition of local associations, to be henceforth an integral part of our organization.

The Teachers' Registration Council.

The establishment of the Teachers' Registration Council marks an era in English educational history. It is not only that it will give us before long a Register of men and women definitely acknowledged as qualified to teach, but that the making of the Register has been entrusted to teachers themselves, and that we may hope to see evolved a self-governing profession whose diversity should act as a wholesome antidote to professional narrowness. Can the profession rise to its opportunity? Is there a desire for unity and co-operation, or is the idea of unity a mere delusion, to be laid aside save on ceremonial occasions when conventional politeness demands that courteous words of little meaning should be used to conceal our divisions? Fundamentally, our reply will depend on the view taken of the task before us. Not a hundred years ago English education was mainly an education of groups, in the culture traditionally desired within the group. So far as it was in the public eye at all, it consisted of the training given to boys in the ancient public schools, and of the very simple elementary education undertaken by private or semi-private persons, landowners, clergy, and the like, for the benefit of tenants or parishioners. The State recognized no obligation in the matter; the great bulk of the nation either provided, or neglected to provide, its own education on entirely individual lines. Much excellent work was done—possibly we shall rarely touch the level reached by some early pathfinders—but the private practitioner, good, bad, or indifferent, was uncontrolled; there was no Board of Education to curtail his unchartered freedom, no public opinion to attribute all national shortcomings to schools and schoolmasters (or schoolmistresses).

All Fellow Workers.

Much water has run under the bridge since these days. Gradually the question, "What are we going to do with the children of the country while they are growing up?" makes insistent and ever more urgent appeal to statesmen, to politicians, to social workers of every kind. For all teachers it is literally their vocation—their call. Our collective task is nothing less than the training and education of the whole nation, from the poorest to the richest, from the ablest to the mentally deficient. It follows that unity among teachers is not only possible but essential.

Arrears to be Made Up.

In this work of national education it is obvious that we start late, and many of our difficulties arise from the haste inseparable from previous sluggishness. The Scotch in three hundred years have at least developed a respect for education and a real grasp of its meaning which is still rare in England. Germany learnt much a hundred years ago in a school of bitter adversity. We have not yet a clear conception of the problem, and the field is partly covered—I will not for one moment say cumbered—by vigorous and various growths innocent of any "town-planning" scheme, and not to be replaced by any cut-and-dried scheme without grievous loss.

Middle Class Education.

The education of the middle class, still meagre and uneven, was not systematically attempted until the close of the nineteenth century. This, a disaster in itself, is the more disastrous in that, poor and immature as secondary education has been, it has moulded the aim and the progress of elementary education. The educational ladder, of which we hear so much, has been set up from the primary to the secondary school, while the latter is still incomplete, the lobby obscured by dust and scaffolding. Elementary education itself has been planned from the outside without considered or philosophic basis, without distinct purpose. It is one of the most hopeful signs of the times that in the Workers' Educational Union we see at last an instrument slowly forging itself which should in the near future bring to bear on the training given in the primary schools the instructed opinion of the classes most nearly acquainted with their working and their output.

Early Leaving Age.

But, whatever the strength or weakness of our elementary schools, one grave fact cuts at the root of their service to the nation. It is estimated that three-quarters of the children educated therein receive no further education whatever after the age of fourteen. We must

grapple with this problem before we can call our education in any sense national. I do not believe that it will be solved along any one line, certainly not by the mere multiplication of secondary schools of any pattern yet evolved, nor by the indiscriminate transfer of boys and girls to existing schools. We must recognize in all humility that many growing boys and girls who are capable of making useful citizens, would be, and are, frankly bored by most of the existing forms of higher education. Our ideals of scholarship make no appeal to them at present. Are they therefore incapable of education? And is the work and welfare of the modern world to fall into the hands of men and women whose physical and intellectual training ended with their childhood?

Unity, not Uniformity.

There are signs that we are moving towards greater unity, though in saying so I do not for one moment believe that differences are likely to disappear. I, for one, do not believe in an artificial unity induced by suppressing peculiarities or by curtailing free development. If all teachers could be made to think alike, how dull and worthless their thoughts would be! If it be asked, "What common ground has the master of an East-end elementary school with the Head of an ancient foundation?" I would answer: This at least, that all alike are helping to fashion the citizen of the future, and that the narrow conception of teaching as the purely intellectual training of a group must give way to a wider and more catholic view of the training of whole men in a whole nation, and of teachers as instruments in this training. And if the further question be asked, "Why should we desire unity among teachers? How far will it help us in our daily work?" I would point to the absence in whole groups of schools of the very elements which other schools possess as a matter of course. Take, for instance, the public schools, with their traditions of scholarship, their disciplined *esprit de corps*; the technical and engineering schools, with their eager interest in new forces and modern developments; the elementary schools, with their catholic welcome to all comers, and their amazing success in imparting some measure of knowledge and training to all; our girls' schools, with their ideas of trained intellect, of refinement, of aspiration after beauty in literature, in art, in daily life. We can all think proudly of some schools at least where each of these ideals finds full expression. Why should they not be more widely shared and combined? Why should we expect (for instance) that interest in the things of the mind, in art, in the humanities, should be for ever arbitrarily confined to a small section of the nation or the race? Why not say with Browning:

"I like to know a butcher paints,
A baker rhymes for his pursuit . . ."

If teachers fail, whether in quantity or in quality, or in both, it will not be *wholly* because of poor salaries or hard conditions—men and women have thriven on both before now—but for want of vision, of faith and hope. And our schools will be doubly condemned if they send forth boys and girls with no desire to pass on to others what they themselves have received, no desire to be entrusted with work for the nation and the race. What social service can rank higher than that of training the citizens of the future? If the task of the teacher is belittled, it is partly because teachers themselves fail to realize the full scope of their task, and still more because they do not work as a "band of brothers." As tunnel workers hail their fellows working from the other side, so teachers of every kind should recognize and respect each other's work.

Good Auspices.

There are certain influences making for greater unity among teachers at the present time. (1) The increasing opportunities for collaboration and consultation due to the Act of 1902. On Education Committees or Sub-Committees teachers of all kinds have been co-opted, have heard each other's views, have joined hands in laying down conditions and in advising laymen. (2) The system of scholarships, particularly those for bursars and student teachers, has secured a steady stream of scholars passing from public elementary schools to secondary schools, with a "return flow" into elementary schools of young teachers whose training and experience has been dual. It is most important to maintain this interchange between the schools, yet so to regulate it that the intellectual standard in secondary schools shall not be lowered. (3) The Board of Education, and especially the Inspecting staff. Even though Elementary and Secondary Inspectors are differentiated, they are in constant touch with one another, and their unifying influence can hardly be overrated. We have sometimes had reason to dread the administrative, and still more the political, action of the Board, as tending to undue uniformity and the production of such tabular results as look best in a Parliamentary statement; but I think most Heads, both men and women, would bear grateful testimony, as I do, to the inspiring and sympathetic influence of the Inspectors, local and central, on the work and policy of secondary schools; and I would further express my special gratitude for that encouragement of the teaching of English which may serve the cause of unity by enabling scholars in every kind of school to use our common language with real intelligence. (4) And

lastly, a new influence, making, as we hope, for ever closer unity and co-operation, comes in the Registration Council and the Register.

It is much that a body of teachers acknowledged as representative should be working together, under the sanction of the State, for professional purposes; it is more that they should have agreed unanimously on conditions which shall admit to the profession in future. But I look upon the Registration Council and the Register as the finest weapon for the education of teachers themselves; and I hope we are in sight of better understanding, more goodwill in co-operation, more readiness to learn from and about each other than we have hitherto known. I do not for a moment suggest that the millennium has arrived. Much more remains to be done. What do most of us know, e.g., about the organization of elementary and technical schools? How far are students in training (and the training of teachers is one of the urgent questions of the hour) encouraged to study "what is and what might be" in our National Education? How far do we, as secondary teachers, realize the difficulties created in the upper standards of elementary schools by the continued exodus of the brighter and more promising scholars into secondary and technical schools?

These and other obstacles to unity still remain, and neither the Registration Council nor any other machinery will charm them away. Unity in the twentieth century cannot possibly mean uniformity. That extraordinary complex, the modern nation, cannot be educated according to any one formula. But unity of purpose—the single determination to accomplish a great and many-sided task—will yet form a bond among those whose conception of education grows and widens till it embraces all the forces that teach, as Dante said, how man may make himself eternal, and who are resolved, since teachers they are, that no form or mode of teaching shall be regarded as alien to their common end.

Papers were read on "Some Moral Problems in Education," by Miss KENNETT; on "Home and School Training during Adolescence," by Miss GHEV; on "The Direct Method in Language Teaching," by Miss PURDIE; and on "Homework and Over-pressure," by Miss BANCROFT.

In the afternoon there was a Garden Party at University Hostel, Clifton Hill House.

The following members were elected to serve on the Executive Committee until 1918:—Miss LEAHY (Croydon), Miss PAUL (Clapham), Miss WHITEHEAD (Wycombe Abbey), Miss C. T. YOUNG (Edgbaston), and Miss FRODSHAM (S. Saviour's and S. Olave's).

THE GERMAN MODERN LANGUAGE ASSOCIATION AT BREMEN.

THE biennial meeting of the German Modern Language Association ("Der Neuphilologentag") was held at the beginning of June at Bremen. It lasted the best part of a week, and was attended by over seven hundred members. It would be hard to imagine a more delightful place of meeting than Bremen. In spite of certain modern improvements the town still maintains a strong medieval aspect, with its double-spired Cathedral, its exquisite town hall, its famous Ratskeller, which Goethe has rendered illustrious, and its fine old houses, in which its merchant princes formerly lived. One of these, the Essighaus, a masterpiece of wood-carving and panelling, was nearly bought up and carried away by the South Kensington authorities a few years ago. At the same time the town has a curious English look. There are no skyscrapers in the place, and hardly any of those flats which form so prominent a feature of the ordinary Continental town. The ambition of every Bremer is to live in, and, if possible, to possess a house of his own, and this he generally succeeds in doing, even in the working-class quarters. In fact to him, as to the average Briton, his house is his castle, and perhaps it is not for nothing that the arms of Bremen are a key. Still more remarkable is the cult of the townspeople of gardens and greenery of all sorts. Practically every house, large or small, in the suburbs has a garden, which is exquisitely kept, and where there is no room for a garden the house is covered with creepers, and flower-boxes and plants are to be seen in the windows. Wherever possible, too, the roads are planted with trees. The general aspect of so much green is very delightful and reposeful to the eye. Bremen may in fact be regarded as the Garden City *par excellence*, and gives a splendid example of what may be done with a town whose inner kernel is centuries old. Needless to add, the town is a model of cleanness, and the air is remarkably free from fog and smoke.

In these days of international rivalry and suspicion it is a pleasure to chronicle the goodwill shown by the people of Bremen to the English. The ancient trade relations with England have left an indelible mark on the Bremer's attitude towards this country. One cannot help remarking their family likeness in build, behaviour, and way of looking

at things, and remembering that hereabouts was the cradle of the Anglo-Saxon race, as the *platt-deutsch* spoken by the working people further indicates. This spirit of genuine friendliness was again very noticeable among the professors of modern languages. Men who spend their lives in explaining the greatness of French or English literature to their pupils can hardly be extreme Chauvinists. The very nature of their subject forbids it. Their teaching cannot fail to have an important influence on the next generation in dissipating national prejudices and international ignorances. They are, in fact, the unofficial diplomacy of Europe, whose natural sympathies are on the side of peace and amity. This point was finely brought out by the General Director of the Norddeutscher Lloyd, Herr Heineken, in his speech at a lunch at Bremen given by the company to the delegates. Herr Heineken knows his England well, having spent seven years in this country; he is also a highly valued counsellor of the Emperor William.

Among the givers of addresses were Mr. Clouesley Brereton and Prof. Jones, of University College. In each case the audience filled the rooms, and the way in which their speeches in English were followed and understood was remarkable. English might, indeed, have been regarded as the second official language of the meeting. The opening sitting on the first day lasted from nine o'clock till past one, and on the second from nine till half-past two; yet the interest never flagged, and the afternoon sessions were also well attended. Of many important subjects discussed and debated, probably the most interesting for English people was that which ranged round the preparation of the modern language teacher, including the problem of the intensive study of one or two foreign languages, together with the position of philology in such studies. It would seem that even in Germany, the home of philological study, there is an uneasy feeling of the existence of too much specialization in the older portions of French and English by the future modern language teacher. Noteworthy also was the dissatisfaction displayed in some quarters with the old *allgemeine Bildung*. Complaint was made that certain subjects in which the pupil can never get beyond a certain point should, nevertheless, be kept up till the end of his school course, to the congestion alike of time-table and pupil. In fact, the whole discussion was most significant, considering that nowhere in the world has national education been so stratified and reduced to apparently so permanent a form of organization. The success of the Congress was due in no small degree to its able President, Prof. Hoops, of Heidelberg, one of the foremost English scholars in Germany, ably backed up by his wife, Frau Prof. Hoops, who did much to promote the *Gemütlichkeit* that pervaded the Congress. The foreign delegates appeared in great force: Great Britain, the United States, France, Holland, Russia, Austria, Serbia, were all represented, and one of the best greeting speeches was made by Mr. Urwick, the envoy of the Board of Education. Mention should also be made of the eloquent speech of Dr. Breul, who has served for so many years as the intellectual "go-between" to the two countries. All will wish him success in his great project to establish in London a German Institute as a centre and clearing-house of German culture and German ideas.

As for the hospitality of the town, it was truly Hanseatic. Every evening there was either a banquet or an entertainment of some sort at which good cheer abounded. One English speaker, in fact, after quoting from the essay of a London schoolboy that the mineral wealth of a country consisted of lemonade and ginger beer, said that if the definition held true then Germany, and especially Bremen, must be a poor place indeed, as he had had all the wine and beer he could desire, but that the only thing he found difficult to get was a glass of water.

Certainly the Hock and Mosel which flowed at a banquet in the famous Ratskeller were of a vintage rarely to be met with outside the Vaterland. It is in this famous cellar that are kept the vats, several over two hundred years old, containing Rudersheimer and other famous wines, of which samples are occasionally given to the crowned heads of Europe. These were respectfully visited by the guests. In conclusion, one would cordially recommend anyone who wishes to know more of his German cousins to pay a visit to Bremen. Its glorious past, still legible in its medieval houses and public edifices, its modern beauties, its interesting resemblances with England, its excellent shops, and its reasonable hotels, all combine in making it an excellent starting-place for a German tour, especially for those who would approach it by sea.

MESSRS CADBURY, of Bournville, in co-operation with the Birmingham Education Authority, have started an interesting experiment in the form of a continuation school. All girls employed in their factories between the ages of fourteen and seventeen are compelled to attend classes once a week, either from 8.30 a.m. to 12.30 p.m., or from 1.30 p.m. to 5.15. The subjects taught are non-technical: English language and literature, household accounts, general information, and physical drill. Home work is also encouraged, and in addition one evening a week is devoted to needlework. Last term 454 girls attended. Both day and piece workers are compensated for loss of time.

ASSOCIATION OF ASSISTANT MISTRESSES.

THE Annual Summer Meeting of the Association was held by permission of the Head Mistress, Miss Heron, at the Wyggeston School for Girls, Leicester, on Saturday, June 6. A resolution welcoming the Report was moved by Miss Laurie, seconded by Miss Ridley, and carried *nem. con.* The point that aroused most interest in the discussion was the superannuation allowance for existing teachers. Teachers in Welsh Schools were anxious to know if years of service before 1903 would be counted. Miss Laurie thought not, but undertook to make inquiries.

Miss Lees, on behalf of herself and Miss Laurie, then asked for an informal expression of opinion on the retiring age of sixty as compared with fifty-five. She pointed out that retirement at the age of fifty-five instead of sixty would involve, roughly speaking, a loss of one third of the annual pension as well as £5 a year of the superannuation allowance. On a show of hands the meeting voted unanimously that they would like the option of retiring at fifty-five instead of sixty if they so wished. Miss Lees gave a short account of the recent work of the Teachers' Registration Council. She urged members to register themselves while it was still an act of grace and not of necessity. Two alterations have been made in the regulations since the January meeting: (1) the years of grace have been extended from 1918 to 1920; (2) No. 1 in the appendix of qualifications for the permanent register now reads: "A certificate of having passed the final degree examination of any Universities approved by the Council for the purpose of Registration, under such conditions as to courses of study and preliminary examinations as may be accepted for the time being by such University."

In the afternoon Mr. Hartog, Academic Registrar of London University gave a delightful address on "Imitation, Sincerity, and Imagination in English Composition." That it was a stimulating one was evidenced by the number of questions asked afterwards.

The meeting closed with warm votes of thanks to Mr. Hartog for his paper and to Miss Heron and her staff for their generous reception.

Miss Heron then invited the members and friends to tea and to inspect the building afterwards.

HOUSEHOLD AND SOCIAL SCIENCE DEPARTMENT, KING'S COLLEGE FOR WOMEN.

H.R.H. PRINCESS CHRISTIAN laid the foundation stone of the Queen Mary Hostel and the Laboratories on Campden Hill on Thursday, June 11. The greater part of the endowment required for this department has already been subscribed by a few munificent donors, but a further sum of £50,000 is required to fulfil the conditions laid down by the University preliminary to constituting it a University Department.

Lord Rosebery, who presided as Chancellor of the University, dwelt on the importance of college life for students such as would be provided by the Hostel. In the course of his speech he observed: "I cannot help feeling in the bottom of my heart that college training and comradeship superadded to the University training are the really perfect kind of University teaching. It is that comradeship among students, that college training, that common life which teaches you what things to imitate and what things to avoid. It is the essence of a college. Without that I cannot believe that any student, however fortunate he may be in his University, receives the highest and truest seal of University life."

Sir Henry Miers, Principal of the University and Chairman of the Home Science Executive Committee, pointed out that the aim which had always been kept in view in the development of these courses was to secure a University standard. "It was the object," he said, "of those who initiated the scheme that the courses should be throughout of a University standard; that they should provide a real scientific education in the principles underlying the organization of home life, the conduct of institutions, and other spheres of civic and social work in which these principles are to be applied; and . . . it is our determination to maintain this as a real University course, and not to allow it to become in any sense only technical. Since the Senate have decided to transfer the Arts and Science Departments of King's College for Women to King's Col-

lege, Strand, there is all the more reason to widen the course, and to conduct it in such a way as to give a real University education." Amongst the donors whose aid had made this development possible Sir Henry Miers especially mentioned Lord Anglesey, Sir Richard Garton, Mr. Dewey, Mrs. Wharrie, Sir Carl Meyer, and Mr. and Mrs. Almeric Paget.

Miss Oakeley, Warden of King's College for Women, speaking of the place of the movement in the higher education of women and the needs which had led to the present departure, described it as in one aspect a contribution towards the solution of the problem of the right relation of knowledge to life. "The movement means no backward-looking, no break in continuity or charge of ideals, but a spreading or extension of their illumination."

Prof. Starling pointed out that this training prepared women not only for the management of the household, but for many of those positions under National and Local Government which are becoming increasingly open to them, and in which it is of the highest importance to have the kind of knowledge which is given in this Course. From this point of view the State may be regarded as an immensely enlarged household.

The Mayor of Kensington, in thanking Her Royal Highness for her visit on behalf of the Royal Borough, observed that he was particularly glad that this Institution was to be established in Kensington so near to districts which had great need of social work inspired by knowledge.

THE "ALCESTIS" AT BRADFIELD COLLEGE.

THE Greek play at Bradfield is a thing *sui generis*. One is not wont to approach a theatre by a zigzag path of interlacing verdure, and, when one has gathered the gifts of many eager hands and reached the bottom, the scene is one of startling beauty. Around you, climbing up the sides of a disused chalk pit, overhung with trees, are tier upon tier of seats hewn out of the chalk till they are lost in recesses of delightful shade.

But now all is stir and hum; nor may you linger till you have satisfied the last challenge of the insistent wand-bearers and are safely lodged in your appointed *bathron*. Then you may look around in peace. Below you is a paved orchestra, with an altar to Dionysus, on which burns the sacred fire, and in front a stage with an Athenian temple. Soon a trumpet is heard from without and the crowds cease to flow, for the gates are rigidly closed at 3 p.m. Then a herald, thrice in Greek, commands your best behaviour and summons the chorus to appear. Musicians, lightly robed in folds of pure colours, wreathed with laurel, and armed with Grecian lutes and lyres, troop across the stage; these are followed by a throng of greybeards bearing staves, who sing and argue of the present things—and the "Alcestis" has begun. Many have asked why the "Alcestis" is chosen, and they find their answer; for, whatever may be said of the plot, the scenic effects, at least as presented in the Greek theatre at Bradfield, are a lasting memory.

The motive of the play is much discussed. Some would treat it as a burlesque on the religion of the day. But surely without reason; for the key is to be found in the grand words of the closing chorale, as full of awe and reverence as those of the old hymn—

"God moves in a mysterious way
His wonders to perform."

It is rather the prophecy of a new religion, wherein the laws of fate are broken by the conquest of death, and the gods are become the gods of the plain and the friends of man. The principle of vicarious suffering is also foreshadowed, and in the death and resurrection of Alcestis it is possible to see prefigured the regeneration of woman. The presentation of the play, taken as a whole, is admirable; and the acting is simple and dignified, as becomes Greek tragedy. There is plenty of art, but nothing that seems artificial. The ample space for graceful movement, the light of day, the song of birds and whispering trees that mingle with the sound of flute and lyre, create an atmosphere that it is impossible to resist. One falls in love with it all, and forgets to criticize. It may be that Alcestis was lacking in feminine wiles and ways, and Admetus a little mechanical; but the maidservant, Pheres, and the Coryphaeus were excellent, and Hercules good at times. Occasionally emphasis was misplaced, and the cadence too monotonous; but these were faults that did not mar; and the great appreciation that the classics, when worthily treated, can still command is shown by the fact that the seats were full for each of the five performances.

OBITUARY.

GEORGINA KINNEAR.

THERE has passed away during the past few weeks one whose name is, perhaps, not so well known in the educational world south of the Tweed as it deserves to be, but who calls for more than a passing notice on account of the sound and admirable work which she accomplished, and of the mark which she has left on the education of women in Scotland.

Georgina, daughter of John Gardiner Kinnear, sister of Lord Kinnear, the second of a family of seven children, was born in Edinburgh in 1828. Her father moved to Glasgow when she was eight years old. She was by nature a student, and the earliest picture we have of her is as quite a little child getting up at 5 a.m. to sit rolled up in a shawl in an attic reading hard long before anyone else was astir. The habit thus formed of beginning her day at 5 a.m. she kept up until within a year or two of her death. She never went to school, and the ordinary superficial education which she shared with the girls of her time meant but little to her. From the tutors who taught her brothers she learnt languages, but to her own efforts and industry and instinctive knowledge of how to learn were due the accurate knowledge which characterized her powerful intellect and the trained accuracy of her mental perception. She learnt also to use her hands, and under her mother's guidance she became an accomplished needlewoman, and till near the end of her life her fingers were constantly busied with beautiful fine work. She was born with a genius for imparting knowledge and moulding character, but some years elapsed before she had an adequate field for the full use of her powers as educator.

The opportunity came in 1860, when her father's friend, Lord Napier and Ettrick, was appointed Minister at The Hague, and he and Lady Napier persuaded her parents to allow her to go with them, and to occupy herself with the education of their children. Her stay in Holland, though full of interest, was short, for rather more than a year later Lord Napier was transferred to St. Petersburg as Ambassador, and Miss Kinnear accompanied him and his family to the Russian capital. Before this time she had travelled in many parts of Europe, and she spoke French and German fluently. She now studied the Russian language, and learned all she could of the life of the people. When Lord Napier's sons went to school, she transferred herself to the family of M. Nicolai Milutine, the leader of the Russian Liberal Ministry, which not long before had passed an edict for emancipating the serfs. Just as Lord and Lady Napier had become her friends for life, so now M. Milutine made her the confidante of his far-reaching plans of reform, and thought so highly of her judgment that he frequently consulted her, and obtained from her information as to English political methods. She was an ardent Liberal and reformer, and keenly in favour of his proposals for representative government and universal education, which he hoped would be followed after an interval of time by manhood suffrage. The Tsar, Alexander II, reformer though he was, did not go so far as his Minister. He refused his consent to these drastic changes, which were put off time after time; M. Milutine's health broke down under the strain, and he was obliged to resign, leaving his plans to be still a dream of the future. Miss Kinnear was much with him during his illness, though she was in England at the time of his death. She went back to be with Mme Milutine till her daughters were grown up; they were devoted to her, and with them and their friends she passed several summers in the far interior of Russia or in the Crimea, and saw much of the life of the peasants, for whom she formed a high esteem. "They are a fine people," she used to say, "and only need education." Miss Kinnear returned finally to her own country in 1874, with her character and opinions greatly matured, having seen much of men and things and studied many subjects widely and deeply. A subject of paramount interest with her was that of the higher education of women, and from this time onward her life was devoted, with characteristic energy and thoroughness, to this cause.

She had an unusual grasp of the subject as a whole, but wished to become acquainted in detail with the practical working of a large school, and with that object she went to Cheltenham as a mistress under Miss Beale. She found that the women, who in this country had been studying the same problems, had on many points reached conclusions different from her own, to which she clung tenaciously. For instance, she distrusted the system of examinations, not merely as an unfair test of proficiency, but because she had a horror of anything in the nature of cramming. In her own school in Glasgow later on no special preparation for examination was ever allowed. If a girl had satisfied her class teacher as to her knowledge of the subject in general, she might if she chose enter for examination, and such girls nearly always did well. At Cheltenham Miss Beale once asked her to prepare a class of elder girls for a particular examination; she felt it right to conform to the rules of the school, and undertook to do so. When Miss Beale made her round of the classrooms she was so much struck by Miss Kinnear's brilliant teaching that "she swept in all the unoccupied mistresses in the house to listen to the lesson." One of the girls in her class passed with distinction, but Miss Kinnear's only comment was: "She did not really deserve it; she did her best, but she did not know her subject, only a small fraction of it."

Only once did she attend the Head Mistresses' Conference, and she took no part in the discussions; she differed from the majority on so many points that she felt she could do so to no good purpose. Her criticism afterwards was that we were far too much given to congratulate ourselves on our success, and on the progress of women's education, whereas we are only at the beginning of a great movement, and feeling our way and trying experiments, many of which are doomed to fail. As an illustration she said: "Compare the number of men and women students in the Universities; when there are more women than men, as there ought to be, we may begin to speak of progress."

From Cheltenham Miss Kinnear passed on to St. Leonard's School, St. Andrews, where Miss Lumsden was then Head Mistress and Miss Dove one of the staff. A well known lady, who in later years was Head Mistress of the school, and was one of her first pupils, writes:—"No one could have a deeper admiration than I have for Miss Kinnear; I loved her truly, and shall always feel proud of having known one of the most remarkable women of her age. I was at school at St. Andrews in the earliest days, and she must have taught me when I was thirteen. I have the most vivid recollection of her lessons and of her most delightful personality, and I remember her in later years as the intensely interesting and unfailingly humorous friend, whom it was always such a pleasure to meet."

In 1880 Miss Kinnear was chosen out of fifty candidates to be the first Head Mistress of the Park School in Glasgow, which was just being started by a local committee. She had not herself thought of applying, but was persuaded to do so by her friends, and she was very glad to have there an independent sphere of work and scope for carrying out her own methods and theories. Her Council wisely gave her a free hand, and trusted her absolutely. Her ideals and standards were high. To her education was never a mere question of imparting knowledge, but necessarily included the training of character, and she was not content without instilling into her pupils the strong religious and moral principles without which no education is worthy of the name. She inspired her children with her own ardent love of study and scholarship, and led them to form habits of diligence, concentration, and self-control. She had but little faith in modern methods of combining work and play, and wished recreation to be complete while it lasted. She would not allow children in the lower school to do any home work. Preparation was done in school, and the books left there; she said that children by themselves took an hour to do the work of twenty minutes, and thus acquired desultory habits of work; even for the upper school girls the home work was strictly limited. She preferred that little children under seven should not be made to work

at all, and was of opinion that information picked up unconsciously was the best foundation for future study, and that the immature powers of young children acquired and retained greater vigour when allowed to develop along their own lines, in a natural way, untrammelled by exterior methods of training.

Those who worked under Miss Kinnear are unanimous in their admiration for her. One former member of her staff writes: "It was a happy day for the new educational movement in Glasgow when the directors found Miss Kinnear willing to undertake the difficult work of pioneer, as both by character and intellect she was eminently fitted to deal with the situation. She was an inspiration to us all, and unsparing in the use of her powers. I always felt her mind was statesmanlike; she could grasp large questions and deal with them in a large way." Another writes of the deep and abiding influence of Miss Kinnear's rich and beautiful nature, and tells how her old girls love to recall her patience, her penetrating sympathy, her habit of seeing the good points and ignoring the defects. "We felt we were the better just from having known her; meanness and cowardice fled from her great personality. The school was not only begun by her; it was shaped for always by her large and noble genius, and I hope the impress of her mind and the impetus of her will will be the guiding force of many generations of school girls." A third recalls her generosity and disinterestedness in dealing with her staff; her thought was not solely or mainly what was good for the school, but also what was advantageous for the future career of the teacher; she never wished her mistresses to remain always with her, however valuable their work might be, but persuaded them to go for a time to other schools for variety of experience. Under her rule the Park School so prospered that the directors were able to open two other schools in the neighbourhood of Glasgow, and the Heads of both, as well as her own successor, were mistresses trained by her. She held strong views about adequate remuneration for teachers, and refused part of the salary offered to her in order that no one on the staff should be underpaid. Her unselfish devotion to the best interests of the school led her to remain in harness longer than she intended. She had always wished to resume her student's life again in the later part of her life.

She went on working for others too long; almost immediately after her resignation, in 1900, her health broke down, and she was never well enough to carry out the elaborate scheme of study she had drawn up for herself. "All my life," she said, "I have been working for other people; now I am going to work for myself." But, alas! it was not to be.

After her resignation she lived a retired, and latterly an invalid life in Edinburgh, and she passed away there on April 26, 1914, in her eighty-seventh year, leaving behind her a stimulating example of high purpose, strenuous work, and wide influence for good, inspired by the gentleness and simplicity of deep and true Christian faith. A surprising number of women now bear their testimony that to her they owe all that is best in their lives.

She had great social gifts, and was a brilliant talker, and many of her younger friends will recall the delight of a long walk and talk with her in the country, and of leading her to talk on one of her favourite topics, a period of history—notably the reign of Queen Elizabeth—or Russian politics, or the growth and structure of a language. Under such circumstances her powers of graphic description and keen analysis would be at their best, and she would illustrate her narrative with shrewd and humorous comments, her words flowing so rapidly that the listener's only trouble was to keep up with her. Walking was her only form of exercise, and gave her real pleasure, enhanced by her appreciative admiration of fine scenery and of all natural beauty.

THE Secondary Schools Association will hold its annual meeting at Caxton Hall, Westminster, on July 7, at 2.30 p.m. Mr. Cloudesley Brereton will deliver an address on "Fitting the Secondary School to the Needs of the Twentieth Century."

SCHOOL EXCURSIONS.

A BRIEF account of a typical School Study Excursion carried out in the last week of April by the Upholland Grammar School, near Wigan, may serve to increase interest in such enterprises, and to suggest means by which they can be made successful.

The locality chosen was Conway, in North Wales. This was an excellent centre, because the country around offers features of such varied interest. The geographical configuration of the mountains, valleys, and bays gave rise to continuous practical teaching, far more realistic than could be given in connexion with textbooks; and the history of hill formation and earth sculpture could be freely illustrated. The Conway valley, with its narrow stream and widely sundered scarped cliffs; the isolated mass of the Great Orme; Conway Bay issuing into the Menai Straits—such features as these abound in the neighbourhood, and afford an open textbook for the geographer and geologist. And, besides the grander illustrations, there are quarries and mines and mineral works, where pupils can find "specimens," those highly valued treasures that make a heavy bag so well worth carrying! The locality is also rich in historical remains. There is the fine Edwardian castle itself, and within easy reach its congener of Beaumaris;

at Deganwy close by is the ruin of a Norman motte-and-bailey structure; on Conway Mountain an excellent neolithic stronghold—and so on. Wherever the daily expeditions are planned such records of the human past can be visited; while the Church, Bangor Cathedral, and other buildings afford good examples of Medieval architecture of another sort. There are abundant subjects for sketching; and the variety of landscape and soil provides a wide field for the botanical and Nature-study classes.

For a school excursion such diversity of interest is invaluable; the object is to quicken the pupils' perception and activities in as many ways as possible within a brief space of time; to bring the real into practical connexion with book and class learning; and all books and classes should, if possible, receive the stimulus. Every member of the staff took part in this excursion, so that every subject was represented. The Head Master (Mr. C. H. Cox) assumed the general direction of the daily tours, his particular subjects being geography and geology; the Science Master was responsible for Nature study; the History Master dealt with places of archæological interest; the Art Mistress with Nature study and whatever sketching could be got in; and three others contributed help in various ways. A carefully drawn up guide and daily itinerary had been prepared beforehand, three of the staff having explored the ground. Each pupil carried a copy of this, so that no one was at a loss as to what was being done. Notebooks were also freely used, and half an hour had to be spent each evening in getting notes into good order for subsequent essays. Maps of the district had been exhibited in the schoolrooms, and some preliminary lectures had been given; the region was thus partly understood before the journey commenced.

The school is fortunate in possessing a Master (Mr. E. Stedman) capable of devising and carrying through the detailed arrangements of travel and accommodation. This side of an excursion is of the greatest importance; unpunctuality and discomfort may spoil an admirably projected scheme. One cannot appreciate even Mont Blanc if one has a cold or a toothache, and young people are peculiarly susceptible to physical conditions. Fortunately the weather was fine. But more than that, distances were correct, pace was regulated, stoppages for lunch came at the right time and place; meals, arrivals, departures were all carried out as indicated in the guide; consequently, none were weary or dissatisfied, and although the average daily walking amounted to about fourteen miles, all returned strong, healthy, and eager for more.

An important feature of such an excursion as this is the sense of comradeship that it engenders. Countless opportunities arise for mutual help, friendly conversation on interesting topics, and combined effort, so that a sense of the value and enjoyment of doing good things in company is developed, and teachers and pupils come to understand one another as they often do not at school. This aspect of the expedition was emphasized by having each evening a social hour, with singing, games, and recitations, followed by common reading and prayer before going to bed.

The cost to each member of the party was 30s. This included fares and all accommodation; not a penny more was necessary for full participation. On a previous occasion, when the distance was less, and the board and lodging rather cheaper, 20s. to 25s. was charged, according to age. The school is a secondary mixed school, and the boys and girls were housed separately. The excursions and the social gatherings were, of course, shared by all. Just half the total number of the school took advantage of the opportunity; the rest stayed back for various reasons—largely, of course, financial. This is, perhaps, a weak point; many who were best qualified to benefit were debarred from joining. It is hoped that the formation of a school bank will remedy this defect next year.

Should any reader desire to see a copy of the guide, or to make inquiries with a view to organizing similar excursions, communications could be sent to Mr. Stedman at the school.

METHUEN'S
NEW BOOKS.

ANCIENT AND MEDIEVAL ART: A

Short History. By MARGARET H. BULLEY. With 40 Illustrations and a Chart. Crown 8vo. 5s. net.

This book, which is the first of its kind, contains thirteen lessons on ancient, classic, and medieval art; an introduction which discusses the methods and the necessity of teaching the history of art in schools and homes; and a chart illustrating the great art periods of the world. The first part of each lesson consists of elementary instruction in the form of a story, suitable for children from eight to thirteen years, and the second part of a summary of the art of the same period for use in preparing lessons for older classes. Although the book is intended primarily for schools, it should be found useful by all who want a short account of the growth and development of art.

PRACTICAL APPLIED PHYSICS.

By H. STANLEY, B.Sc., F.I.C., Lecturer in the Merchant Venturers' Technical College, Bristol, Author of "Practical Science for Engineering Students." With many Diagrams. Crown 8vo. 3s.

This book is for the use of engineering students and others who are doing laboratory work beyond the elementary stages, particularly in heat, mechanics, and electricity. The earlier section deals with some graphical methods leading up to the calculus and the solution of some differential equations which are employed later.

PRELIMINARY PRACTICAL SCIENCE.

By H. STANLEY, B.Sc., F.I.C., Author of "Practical Applied Physics." With 120 Diagrams. Crown 8vo. 1s. 6d.

This little handbook is intended for use in the lower forms in trade schools and for technology students in all branches who are entering on a course of science study with a view to a better understanding of their work.

A TEXTBOOK OF ELEMENTARY BUILDING CONSTRUCTION.

By ARTHUR R. SAGE, Chief Lecturer in Building Construction and Mechanics of Building, L.C.C. School of Building, and WILLIAM E. FRETWELL, Chief Lecturer in Plumbers' Work, Sanitary Engineering, and Heating and Ventilating, L.C.C. School of Building. With many Diagrams. Crown 8vo. 3s. 6d. net.

This book is intended for students of Elementary Building Construction as a first year's course, leading up to the Lower Examination of the Board of Education. It should also be useful to students preparing for the various professional examinations, of which building construction and sanitary engineering form part.

A THIRD-YEAR COURSE OF ORGANIC CHEMISTRY.

By T. P. HILDITCH, D.Sc. (Lond.), F.I.C., Author of "A Concise History of Chemistry." With many Diagrams. Crown 8vo. 6s.

This book combines a systematic survey of the important class of heterocyclic substances, with a summary of various groups of bodies (notably the alkaloids, purines, polypeptides, carbohydrates, and terpenes) which have formed the subject of the more important research of modern times.

HISTORY AND GEOGRAPHY.

A CLASS BOOK OF GEOGRAPHY. By A. W. ANDREWS, M.A. 5s.

Nature.—"Mr. Andrews' textbook is particularly important from three points of view. He has paid special attention to climate, to maps, and to typical physical conditions. From the data which he supplies in reference to climate, the student who works through the exercises provided will have a definite and precise knowledge of the climatic facts of the world arranged in a systematic way. The numerous maps are appropriate and useful."

School World.—"A mine of information. Teachers should see this book."

ARNOLD'S JUNIOR GEOGRAPHY. By W. MACLEAN CAREY, M.A., B.Sc., Second Master of Rutlish Secondary School, Merton, S.W. 1s.

FOR RESIDENT AND DAY STUDENTS.

MICHAELMAS TERM BEGINS THURSDAY, OCTOBER 8th.

LECTURES are given in preparation for all Examinations of the University of London in Arts, Science, and Preliminary Medicine; for the Teacher's Diploma, London; the Teacher's Certificate, Cambridge; and for the Cambridge Higher Local Examination.

There are special courses of Scientific Instruction in Hygiene (designed to furnish training for Women Factory and Sanitary Inspectors and Teachers of Hygiene) and in Horticultural Botany.

A single course in any subject may be attended. There are Boating, Swimming, and Hockey Clubs; the College gardens, with lawn tennis courts, hard court, and net ball ground, are available for the use of Students.

ENTRANCE SCHOLARSHIPS in Arts and Science will be offered for competition in June next. A few residence bursaries are given under special conditions.

SECONDARY TRAINING DEPARTMENT.

The Course includes full preparation for the Examinations for the Teaching Diplomas granted by the Universities of London and Cambridge.

Students are admitted to the course in October and in January.

One Free Place (value £26 5s.), one Scholarship of the value of £20, and a limited number of grants of £10 are offered for the Course beginning in January, 1915. They will be awarded to the best candidates holding a degree or its equivalent in Arts or Science. Applications for Scholarships or Grants should be sent in on or before December 1st.

For further conditions apply to the HEAD OF THE DEPARTMENT.

MADAME

BERGMAN ÖSTERBERG'S
PHYSICAL TRAINING COLLEGE,
DARTFORD HEATH, KENT,
FOR RESIDENT STUDENTS.

The College, the first of its kind in England, was opened in 1885, with the view of training educated women as Teachers of Scientific Physical Education.

The Course of Training conducted by a large and competent staff of teachers, extends over two years. It includes the study of Anatomy, Physiology, Hygiene, Anthropometry, and Theory of Movement. In practical subjects instruction is obtained in Ling's Swedish Gymnastics, Dancing, Outdoor Games, and Medical Gymnastics and Massage. At the end of the Course, examinations are held and certificates of theoretical knowledge and practical efficiency in teaching are awarded to successful students.

The College, which provides 50 separate bed-sitting rooms and several large studios, is situated on very high ground, gravel soil, on the confines of an extensive heath, half an hour from town. It stands in its own fine grounds of fourteen acres, which contain an Outdoor Gymnasium, Running Track, Cricket and Hockey Grounds, Lawn Tennis Courts. The Indoor Gymnasium, 70 ft. by 35 ft., and the Medical Gymnastic Room, 30 ft. by 25 ft., lofty and well ventilated, are fitted up in the most perfect style, all the apparatus having been designed and executed in Stockholm.

The immediate neighbourhood offers over one thousand children for the students' practice as teachers. Hundreds of posts have been obtained through this College, a list of which is to be obtained with the Prospectus.

Students admitted in September.

For particulars apply—THE SECRETARY.

MADAME

BERGMAN ÖSTERBERG'S
UNION OF TRAINED GYMNASIUM TEACHERS.

Ling's Swedish System.

Aim of the Union: To advance the cause of Physical Education on scientific lines.

In placing members of this Union as Teachers in Schools, careful and discriminating choice is exercised, and the exact requirements of each School specially considered.—**PHYSICAL TRAINING COLLEGE, DARTFORD HEATH, KENT.**

Transfer and Pupils' } F. C. NEEDES, B.A.
Department: }

The following are a few properties, amongst others, which Messrs. NEEDES & BULL have been instructed to negotiate:—

Dorset, Seaside.—Old-established Girls' School. Vendor retiring through advanced age. 10 boarders, 2 day, and 25 to 30 day pupils. Receipts over £900 p.a. Good house and grounds. **Sound genuine investment.** Goodwill £300. School furniture at valuation.

Home Counties.—Successful Girls' School. 11 boarders, 60 day. Receipts about £950 p.a. Good house and grounds. Splendid chance of working up a large school. School furniture at valuation. Goodwill to be arranged. **We can thoroughly recommend this.**

Midlands.—One-third or two-thirds Share for Sale of a most successful and flourishing Boarding and Day School. Income over £2000. Accountants' report shown to all bona fide buyers. Price £400 and £600 respectively. **Highly recommended.**

Near London.—High-class Day for Daughters of Gentlemen. 40 pupils. Receipts £1200 about. Excellent premises, detached gymnasium, field, &c. Accommodation for boarders. **Capitation fee accepted. School well known to, and recommended by, us.**

Bucks.—High-class Ladies' Day. 25 pupils. Receipts nearly £500. Beautiful premises (specially built) with good grounds. 15 Terms capitation fees. Excellent chance of developing a good school.

East Coast.—Flourishing Boarding and Day Girls with little boys. 5 boarders, 40 day. Receipts £400. Good house and grounds. Rent £60. Others entertained for house and school furniture and goodwill.

Messrs. NEEDES & BULL have numerous small schools and Partnerships in and near London. Capital from £50 to £150.

No commission charged to Purchasers.

The BRITISH & FOREIGN SCHOOLS AGENCY

Principal—Mrs. POYNTON,
62 King Street, Manchester.
(WITH LONDON AGENTS.)

(1) **Yorks. Coast.**—Old-established School for Girls (1866). Only one other school of the kind in the town. Rent £45 per annum, taxes under £20. Gross receipts about £450 per annum. £200 will be taken for Goodwill and all school furniture; no house ditto on sale.

(2) **Yorks. Well-known Inland Health Resort.**—Old-established High School for Girls in flourishing condition. Transfer on account of health. Full particulars to *bona fide* enquirer. Small amount of capital only required.

(3) **Cheshire.**—Small Day School, with accommodation for boarders, about 30 day girls. Boarders have been refused on account of ill-health of Vendor. Rent £22 per annum, rates £6. 10s. No opposition; living cheap. £65 for Goodwill and school furniture to an immediate purchaser, as Vendor's illness compels retirement.

(4) **Cheshire.**—Third Partner in old-established School showing good profits. About £200. Kindergarten teacher *not* required.

(5) **Salop.**—Boarding and Day School for Girls. Established 35 years. Expenses low; large house with good schoolrooms. £36 per annum *only*. Gross receipts just over £300. Capitation fee one term as Goodwill.

(6) **Near London.**—Two Shares (out of three) in a first-rate Boarding and Day School for Girls. Goodwill about £400 per share. Purchasers should either undertake the domestic side or the upper school. Full particulars as to income, balance sheets, and every detail will be supplied to likely enquirer. Very satisfactory reasons for disposal. School has about 150 day girls and 12 to 14 boarders, with ample accommodation for more. Established 11 years; past two years show an increase of £500 per annum in the income. Profits exceedingly good.

WANTED.—Prep. School (Boys' or Girls'), within 60 miles of London; must be in flourishing condition. Ample capital at disposal.

WANTED.—Two Schools for Girls, Lancs. or Yorks. Capital at disposal £400 and £200 respectively. Must bear investigation.

WANTED.—School for Girls any locality, income between £250 and £400. Good house, with gardens. Purchaser experienced teacher with capital.

Full particulars of above and others will be supplied on application to SECRETARY.

NORTH OF ENGLAND COLLEGE FOR TRAINING KINDERGARTEN AND JUNIOR FORM TEACHERS. CRIMSWORTH, UPPER CHORLTON RD., MANCHESTER. President: The Rt. Hon. Sir WILLIAM MATHER, LL.D. Hon. Secretary: Miss E. NEDHAM, M.A. Principal: Miss FLORENCE SUTTON, N.F.U.

The house stands in two acres of ground, and has accommodation for Resident Students. A Kindergarten and Preparatory School is attached. Fuller information from the Hon. Sec., 4 Lancaster Road, Didsbury.

A limited number of Scholarships will be offered.

OPEN ON OCTOBER 1st.**

The HOSPITAL is the largest in England, and the only large general Hospital for the whole of East London: 922 beds are in constant use. Last year: In-patients, 17,096; Out-patients, 173,774; accidents, 10,363; major operations, 6,751.

The MEDICAL COLLEGE is essentially modern, with large laboratories equipped with the latest and most approved appliances.

The DENTAL SCHOOL, which is fully equipped on the most modern lines and with the latest appliances, is an integral part of the College and Hospital, and is admirably adapted for the purpose of teaching. The School provides a full course for the Dental Diploma.

The STAFF is so large as to permit of individual attention being paid to all Students.

SPECIAL TUTORIAL COURSES are held for all Examinations.

RESEARCH FUNDS of over £21,000 give unrivalled facilities for Medical Research.

APPOINTMENTS.—141 Appointments are made annually from Students of the College recently qualified.

SCHOLARSHIPS AND PRIZES.—Thirty-four Scholarships and Prizes are awarded annually. Five Entrance Scholarships are offered in September.

Clubs' Union, Athletic Ground, College Dining Hall, Students' Hostel.

For prospectus and particulars apply to the Dean (Prof. WILLIAM WRIGHT, M.B., D.Sc., F.R.C.S.), who will be glad to make arrangements for anyone wishing to see the Hospital, College, or Dental School.

Mile End, E.

**THE HOME SCHOOL,
GRINDLEFORD, DERBYSHIRE.**
BOARDING SCHOOL FOR BOYS AND GIRLS.

Principals: Mr. and Mrs. W. PLATT.

This School aims at giving an all-round education. Much work is done in the open air, for which the surrounding woods and moors and streams furnish ideal material. Special attention to children who require a healthy out-of-door life in bracing air.

Further particulars from the PRINCIPALS.

PRIFYSGOL CYMRU.

UNIVERSITY OF WALES.

Rector—His EXCELLENCY THE RT. HON. THE EARL OF ABERDEEN, K.T., G.C.M.G., LL.D., D.C.L.

Principal—Sir JAMES DONALDSON,
M.A., LL.D., D.D.**OPENING OF SESSION 1914-1915.****UNITED COLLEGE.**

(ARTS, SCIENCE, AND MEDICINE.)

This College will be formally opened on Monday, 12th October, and the Martinmas Term will begin on 6th October for Students of Medicine, and on 13th October for Students of Arts and Science.

The Preliminary Examinations, with which the Competitions for Entrance Bursaries are combined, will commence on 11th September. Schedules of application for admission will be supplied by the SECRETARY up to 29th August.

The Subjects of Examination are:—English, Latin, Greek, Mathematics, French, German, Italian, Dynamics. Candidates may enter for five of these in the Bursary Competitions.

For Entrant students there are twenty-nine Bursaries open to Competition. Eighteen are tenable by men only (including the following:—Tenable for four years—1 of £50, 1 of £20, 2 of £13, 1 of £9, 10s.; tenable for three years—1 of £50, 2 of £40, 1 of £30, 7 of £20; tenable for one year—1 of £14). Nine are open to women only; they are tenable for three years, include 3 of £25, 1 of £20, and 5 of £15, and students who intend to enter the medical profession have a preference. There is one Bursary of £25 open to men or women students of any Faculty. One Malcolm Bursary of £25 for 5 years, restricted to Medical Students, is tenable by men or women. In addition to open bursaries there are twelve presentation and preference bursaries vacant.

For students of the Second year there are vacant:—Two Spence Bursaries of £30 each for the first year and £10 for the second year of tenure, for which women are eligible as well as men; and a Bursary of £30 for three years, another of £23, 10s. for three years, and another of £16 for two years, tenable only by men.

Two Bursaries—one of £46, and one of £20, each tenable for one year—will be awarded to fourth-year Honours students. Grants, not exceeding £20 each, may be assigned to Honours students (men or women) during their fourth or fifth year, and six grants of £20 each (attached to different departments of study) may also be assigned to students who, after completing a Degree curriculum, wish to train for Secondary School Teacherships.

In the course of the Session nine Scholarships for advanced study will be competed for, five of which are open to women students as well as to men. They include 1 of £80 for four years; 2 of £50 for two years; and 6 of £80 for one year.

ST. MARY'S COLLEGE.
(DIVINITY.)

This College will be opened on Tuesday, 13th October. The Examination for Bursaries will begin on Friday, 16th October. Intimation of candidature is not necessary. There are five competitive Bursaries vacant (including 1 of £40, 1 of £30, 1 of £24, 1 of £20, and 1 of £17, tenable for three years). There are also 4 presentation bursaries vacant. At the close of the Session one Scholarship of £50, one of £21, and one of £14 will be open to competition.

The Classes in the Colleges are open to Men and Women Students alike, and include Latin, Greek, English, French, German, Hebrew, Arabic, Aramaic, Syriac, Assyrian, Logic and Metaphysics, Moral Philosophy, Political Economy, Education, Mathematics, Applied Mathematics, Natural Philosophy, Chemistry, Zoology, Botany, Geology, Agriculture and Rural Economy, Modern History, Ancient History, Economic History, Sociology, Anthropology, Physiology, Anatomy; Systematic Theology, Biblical Criticism, and Church History.

Specimen Examination Papers and full particulars respecting the Courses of Instruction, Fees, Examinations for Degrees, &c., will be found in the CALENDAR OF THE UNIVERSITY, published by Messrs. WILLIAM BLACKWOOD & SONS, 45 George Street, Edinburgh.

Specimen Examination Papers for the Preliminary and Bursary Competition Examinations are published in separate booklets, and may be had from the SECRETARY, or from Messrs. HENDERSON, Booksellers, St. Andrews.

A general prospectus, as well as detailed information for the coming academic year regarding any department of the University, and particulars of the Bursary Competition, 1915 (which will be held in June, and embraces a new range of subjects) may be obtained on application to the SECRETARY.

ANDREW BENNETT,

The University, Secretary and Registrar.
St. Andrews, August, 1914.

UNIVERSITY OF EDINBURGH.

Chancellor: The Right Hon. A. J. BALFOUR, M.P., D.C.L., LL.D., &c.

Rector: Vacant.

Principal and Vice-Chancellor: Sir WILLIAM TURNER, K.C.B., D.C.L., LL.D., D.Sc., M.B., &c.

Secretary of Senatus: Professor Sir LUDOVIC J. GRANT, Bart., B.A., LL.D.

The **Winter Session** begins about the beginning of October and closes about the middle of March.

The **Summer Session**, except in Law, extends from about the middle of April to the end of June.

The University embraces **Six Faculties**, viz.: **Arts, Science, Divinity, Law, Medicine and Surgery**, and **Music**, in all of which full instruction is given and Degrees are conferred. There are many different avenues to the **Arts Degrees**, the graduation subjects embracing English, History, Modern Languages, Science, &c., besides Ancient Languages, Philosophy, Mathematics, &c. The wide scope of the Arts Curriculum permits of the Combination of Arts, Science, Medical, or Special Studies, and it has been shown by successes of Edinburgh students in the Civil Service Examinations that it is possible to combine study for Degrees in Arts, Science, or Law with preparation for this and other Special Examinations. In addition to the Ordinary and Honours Degrees in Arts, the Higher Degrees of D.Litt., D.Phil., and D.Sc. are conferred. Education in Military subjects is given in connexion with the Scheme of allotment of Army Commissions to Graduates of the University. Degrees in **Science** (B.Sc. and D.Sc.) may be taken in **Pure Science, Engineering, Public Health, and Veterinary Science**; and the Degree of B.Sc. in **Agriculture and Forestry**. There are fully equipped Science Laboratories, and other necessary appliances, in all these Departments. The curriculum in **Divinity** affords a thorough training in Theological subjects, and the Degree of Bachelor of Divinity (B.D.) is conferred. The **Law Faculty**, besides furnishing the professional equipment necessary for those intending to practise in Scotland, contains Chairs in Jurisprudence and Public International Law, Constitutional Law and Constitutional History, Roman Law, and Political Economy, as also Lectureships in other important branches of the Law, and is thus adapted for students preparing for the Civil Service Examinations, and for legal, political, and administrative appointments generally. The Degrees of Bachelor of Laws (LL.B.) and Bachelor of Law (B.L.) are conferred. The Faculty of **Medicine** has a full curriculum in Medicine and Surgery, and is equipped with very extensive Laboratories, and all other necessary appliances for Practical Teaching. Ample facilities are afforded for Clinical Instruction at the Royal Infirmary, Maternity Hospital, Royal Hospital for Sick Children, Hospital for Infectious Diseases, and Royal Asylum for the Insane. Four Degrees in Medicine and Surgery are conferred by the University, viz.: Bachelor of Medicine (M.B.), Bachelor of Surgery (Ch.B.), Doctor of Medicine (M.D.), and Master of Surgery (Ch.M.); and these Degrees qualify for practice throughout His Majesty's dominions, and for admission to the Naval, Military, and other Public Medical Services in the United Kingdom. A **Diploma in Tropical Medicine and Hygiene** (D.T.M. & H.) is conferred on Graduates in Medicine of the University, and specially approved Medical Practitioners who have resided abroad. There is also a **Diploma in Psychiatry** (Dipl. Psych.). A University **Certificate in Tropical Diseases** is conferred on qualified Medical Practitioners who have attended Courses in the University on practical Bacteriology and Tropical Diseases. In **Music** there is a full course of study for graduation, and the Degrees of Mus.B. and Mus.D. are conferred.

The University Staff consists of 43 Professors, over 90 Lecturers, and about 60 Assistants and Demonstrators. The annual amount available for Fellowships, Scholarships, Bursaries, Prizes, &c., is about £19,790. Facilities are afforded for research in scientific and other subjects.

Women may attend the Classes in Arts, Science, Divinity, Law, and Music, and they are admitted to graduation in Arts, Science, Law, Medicine, and Music, the training for Degrees in Medicine being afforded by well equipped extra-academical Schools.

Information regarding Matriculation, the Curricula of Study for Degrees, &c., the Examinations for Fellowships, Scholarships, &c., may be obtained from the DEANS OF THE FACULTIES, or from the CLERK OF SENATUS; and full details are given in the University Calendar, published by JAMES THIN, 55 South Bridge, Edinburgh—price 3s. 5d. by post. The Preliminary and Degree Examination papers in each of the Faculties are also published by Mr. JAMES THIN, viz.:—Arts and Science Preliminary papers and Bursary papers, 1s.; Medical Preliminary papers, 6d.; Degree papers: Arts, 1s.; Science, 9d.; Divinity, Law, Medicine, and Music, 6d. each. 1914.

By order of the Senatus.

L. J. GRANT, *Secretary of Senatus*.

SOUTHPORT PHYSICAL TRAINING COLLEGE.

Beautifully situated near the Sea in healthy surroundings.

President:

Admiral Lord CHARLES BERESFORD, K.C.B., M.P.

Principals:

A. ALEXANDER, F.R.G.S.; Mrs. ALEXANDER.

The Staff consists of Medical Lecturers and experienced teachers in every branch of Physical Training, including a Swedish Mistress from the Royal Gymnastic Institute, Stockholm.

GIRLS of good education are trained as scientific teachers of Physical Training to qualify them for appointments as Gymnastics, Games, and Health Mistresses in schools and colleges. The course, extending over two years, includes:—Physiology, Anatomy, School Hygiene, First Aid and Sick Nursing, Remedial Exercises and Massage, Swedish Educational Gymnastics (Ling's System), Outdoor Games (Hockey, Net-Ball, Cricket, Tennis, Badminton, &c.), Dancing (including Old English and Morris Dances), Swimming and Rowing, Organized Recreative Games for School and Play-Ground.

Diplomas and Gold Medals are awarded to successful students.

The demand for capable teachers of Physical Training is steadily increasing, and students of this College frequently obtain appointments before completing their training.

HEALTH STUDENTS.

Cases of spinal curvature or general physical weakness are received in residence, and treated under medical supervision.

REFERENCES

permitted to Lord Kinnaird, the Right Hon. Viscount Gladstone, the Hon. and Rev. E. Lyttelton, D.D., and others.

French Holiday Courses BY THE SEASIDE.

SAINT-SERVAN, near Saint Malo (Brittany),

AUGUST, 1914 (12th year),

BY
FRENCH UNIVERSITY LECTURERS.

1. Higher Course.
2. Intermediate Course.
3. Elementary Course.

COURSE OF ELOCUTION AND PHONETICS FOR ALL STUDENTS by an Actor of the National Theatre of the Odéon.

DIPLOMAS AND CERTIFICATES.

For Syllabus, apply to

Professor F. GOHIN,
Directeur des Cours de St. Servan,
Avenue Trudaine 12, PARIS.

HOLIDAY COURSES.

INTERNATIONAL GUILD,
6 RUE DE LA SORBONNE, PARIS.

JULY. AUGUST. SEPTEMBER.

PHONETICS every day, Conversation, Grammar, French History and Literature. For prospectus, apply to the SECRETARY.

OXFORD UNIVERSITY TEACHERS' DIPLOMA SCHOLARSHIPS FOR WOMEN STUDENTS.

THE Oxford University Delegacy of

Secondary Teachers offer a remission of the Tuition Fees for 1914-15, and the Council of the Girls' Public Day School Trust offer a remission of half the Tuition Fees for the year 1914-15 to two Women Students in need of assistance to enable them to take the Training Course. Applications should be made in writing not later than August 15th to Miss HAIG BROWN, Oxford High School, Banbury Road, Oxford

MRS. CURWEN'S PIANO-FORTE METHOD.

EAR TRAINING AND SIGHT SINGING FROM SOL-FA AND STAFF.

Training Classes for Music Teachers are held on Saturdays and Wednesdays at Bechstein Hall Studios, Wigmore Street, by Miss SCOTT GARDNER and Miss MARGARET KNAGGS, A.R.C.M. Further particulars can be obtained from the Secretary, Miss J. E. MURRAY, Bechstein Hall Studios, Wigmore Street, W.

FOREIGN Ladies requiring to learn English will be received as PAYING GUESTS—25s. per week with some tuition—by lady (B.A. London University) residing at Windsor. Address—No. 9,835.*

MASTER of Science (Lady) desires Post as LECTURER or DEMONSTRATOR in a University or School. Has had teaching experience in both School and University work. Holds Certificate in Principles, Method, and History of Education. Special subjects—Physics, Mathematics, and Chemistry. Apply—Miss M'ALISTER, M.Sc., Ballycastle, Co. Antrim, Ireland.

SINGING and PIANO MISTRESS

requires post, visiting or residential. Certificates—Solo Singing, A.R.C.M. (Double Diploma); Class Singing, R.A.M. (Professional Diploma); Tonic Sol-fa College (Honours Prof. Diploma). Additional Subjects—Piano (good), Theory, German, French, Cookery (chef cert.). Accustomed to prepare for all exams. Highest references. Address—No. 9,836.*

* Replies to these advertisements should be addressed "No. —, The Journal of Education, 3 Broadway, Ludgate Hill, E.C." Each must contain a loose stamp to cover postage on to Advertiser. Post Cards will NOT be sent on.

WANTED.—“THE JOURNAL OF EDUCATION” Volume for 1885. Complete, in Publisher's Binding, by John Davis, 13 Paternoster Row, London.

CONNEXIONS. HOW TO INCREASE.—See PATON'S advertisements on pages 584 and 585.

Coaching,

Lessons by Correspondence, &c.

CORRESPONDENCE LESSONS.

MISS A. W. GREGORY, L.L.A., Coaches orally and by correspondence in History and Literature, Early English, French, and German for the Matriculation, Cambridge and Oxford Higher Locals, and other University Examinations. School Examinations undertaken.—3 Ickburgh Road, Upper Clapton, N.E.

Patent Rights for Sale.

THE Proprietor of Patent No. 20230 of 1910, and 27740 of 1911, for "Improved means for displaying pictures and the like," is desirous of disposing of the Patent Rights, or of negotiating for the grant of licences to work thereunder. For particulars apply to G. F. REDFERN & Co., Chartered Patent Agents, 15 South Street, Finsbury, London, E.C.

Partnership.

PARTNERSHIP wanted in good-class Boarding School for Girls, or post as ART MISTRESS with view to Partnership. Address—No. 9, 837.*

LADY (Cheltenham and Newnham) seeks Partnership in first-class School with view to succession. Would invest £1,000 at once. Apply, in strictest confidence, to Mr. J. H. PATON, 143 Cannon Street, London, E.C.

Sale or Transfer.

FOR SALE.—SWEDISH GYM-NASTIC, MASSAGE, DRILL, AND DANCING PRACTICE. Near London. Income £360, net £280. Exceptionally good locality. Goodwill and necessary plant, £250. Address—GRIFFITHS, POWELL, SMITH & FAWCETT, School Transfer Agents (established 1833), 34 Bedford Street, Strand.

LONDON SUBURB.—Old-established GIRLS' COLLEGE (with Ladies' Boarding House) for disposal or Partner entertained. About 70 day pupils, besides boarders. Gross income, £1,560. Goodwill, School and household furniture, £500.—1790 S. Hooper's, Educational Agents, 13 Regent Street, London. No charge to Purchasers. Expert advice gratis. Established 1881.

SCHOOL FOR SALE.—GARTLANDS, BROUGHTY FERRY, High-class DAY AND BOARDING SCHOOL FOR GIRLS. Present number of Pupils 30. Ideal situation, Southern exposure, excellent house and garden. Principal retiring to take up very desirable post, will accept moderate sum for goodwill, furniture, and fixtures, and give advantageous terms for purchase of house. (School required; favourable opportunity.)

PRINCIPALS OF

High-class Girls' School in London

WISH TO

JOIN ANOTHER SCHOOL

WITHIN 40 MILES OF LONDON,

OR AT THE SEASIDE.

Can bring 10 to 12 Boarders.

Prepared to join next term.

Principals willing to negotiate, please communicate with—

READY SEPTEMBER 1, 1914.

A NEW READER FOR JUNIOR FORMS.

The Oxford and Cambridge Edition.

GREEK AND ROMAN GODS AND HEROES.

With 8 full-page reproductions of world-renowned pictures and numerous other illustrations 9d.

By P. C. SANDS, M.A., late Fellow St. John's College, Cambridge.

A Classical Reader intended for Junior Forms. The aim of the writer is to introduce to Junior Students the stories of the Greek and Roman Gods and Heroes, and some account of Greek and Roman beliefs, and so not only to bring them into contact with a most beautiful series of legends, but to enable them to understand allusions to classical lore in their later reading.

The style is of course simple. The first four chapters deal respectively with Heaven or Olympus, the Earth, the Sea and the land of darkness below the Earth, and the stories are introduced according as they concern the kingdom of Zeus, that of Poseidon, or that of Hades. Pains have been taken to avoid too many names, and where the same story is repeated in the legends in different connexions, the most interesting version of it has been selected.

OXFORD AND CAMBRIDGE LOCAL EXAMINATIONS, 1915.

The Oxford and Cambridge Edition

The Publishers will be glad to forward specimen copies as an aid to the selection of the most suitable Textbooks for Examination Preparation and General Class Use.

List of books included in the Oxford and Cambridge Edition prescribed for the 1915 Examinations post free.

The Oxford and Cambridge **LAY OF THE LAST MINSTREL.** Edited by Rev. F. MARSHALL, M.A. Introduction and Cantos I–III (*Prescribed for Cambridge Preliminary Local, 1915*). With the necessary Notes for the Examination. 8d.

London: GEORGE GILL & SONS, Ltd., 13 Warwick Lane, E.C.

MACMILLAN & CO.'S LATEST LIST.

ENGLISH.

If—. By RUDYARD KIPLING. Sewed. 1s. net per dozen. Also on Card, 3d. net each.

The Children's Rossetti. Illustrated **Junior.** Nursery Rhymes, &c. Sewed, 4d. Cloth, 5d. **Intermediate.** Nature Poems for all the Year and Poems for some Holy Days. Sewed, 5d. Cloth, 6d. **Senior.** Selected Poems, Lyric and Narrative. Sewed, 6d. Cloth, 7d.

The Wanderings of Rama Prince of India. With Introduction, Notes, &c., by WALLACE GANDY, Author of "A Persian Hero," &c. 1s. [English Literature for Secondary Schools.]

A First Book of English History. By F. J. C. HEARNshaw, M.A., LL.D., Professor of History in King's College, University of London. Illustrated. 1s. 6d. [First Books of History.]

A.M.A. CIRCULAR.—"Professor Hearnshaw gives, in easy, readable English, a clear and interesting statement of the great movements in English History to the triumph of democracy, and the dawn of a new age with the Twentieth Century."

Irish History for Young Readers. By Rev. H. KINGSMILL MOORE, D.D. Illustrated. 1s. 6d. [First Books of History.]

SCHOOLMASTER.—"In this work on the little understood country of Ireland, the writer has admirably succeeded in being at once brief and interesting, impartial and sympathetic."

A First Book of English Literature. By GEORGE SAINTSBURY, M.A., D.Litt., LL.D., &c., &c. 1s. 6d. [First Books of Literature.]

THE SCOTTISH CLASS TEACHER.—"No teacher of English should fail to see this book. It will surely recommend itself."

Shakespeare. Julius Caesar. Edited with Introduction and Notes by the Rev. J. C. SCRIMGEOUR, M.A., Professor of English Literature, Scottish Churches College, Calcutta. 2s. 6d.

Oral Composition. A Textbook for High Schools. By CORNELIA C. WARD, A.M. 4s. 6d. net.

FRENCH.

Histoire d'un Conscriit de 1813. Par ERCKMANN-CHATRIAN. With a Selection of Poems on Napoleon I. Adapted and edited by OTTO SIEPMANN, Head of the Modern Language Department at Clifton College. 2s. 6d. Word and Phrase Book, sewed, 6d. KEY, 2s. 6d. net. [Siepmann's Advanced French Series.]

EDUCATION.

The Thinking Hand, or Practical Education in the Elementary School. By J. G. LEGGE, Director of Education in the City of Liverpool. Illustrated. 8s. 6d. net.

CATHOLIC TIMES.—"Mr. Legge has given us a beautiful volume, one which to managers and teachers of elementary schools will be welcome and inspiring. May it be known in every schoolroom in the land."

The Schools and the Nation. By Dr. GEORG KERSCHENSTEINER (Director of Education in Munich). Translated by C. K. OGDEN. With an Introduction by Viscount HALDANE. Illustrated. 6s. net.

SCHOOL GOVERNMENT CHRONICLE.—"To Mr. Ogden's able and sympathetic translation, he (Dr. Kerschesteiner) contributes an English preface; and Lord Haldane has written a chapter of introduction. The book abounds in passages which one would be glad, at this time, to quote in the hearing of English educationists and public men; and it contains many things that one would wish to have read and pondered by English people of whatever sort and condition, whose thoughts are, or ought to be, turned towards educational matters. Better than hearing them in isolation, it will be to find them in their own context; and it must be hoped that Lord Haldane's recommendation will be influential to that effect with many."

THIRD EDITION. THOROUGHLY REVISED.

The State in its Relation to Education. By Sir HENRY CRAIK, K.C.B., M.P., formerly Secretary to the Scotch Education Department. Third edition, thoroughly revised. 3s. 6d. [English Citizen Series.]

THE TIMES.—"We heartily commend this instructive book to those who do not know it, and hardly less to those who have studied the former editions of it."

GEOGRAPHY.

A Junior Geography of the World. By B. C. WALLIS, B.Sc. (Lond.), F.R.G.S., &c. With Coloured Maps and Illustrations. 2s. 6d. [Macmillan's Practical Modern Geographies.]

NATURE.—"The book possesses many merits; its language is always clear, its accuracy, so far as can be judged, unimpeachable."

The Pupils' Class-Book of Geography. By ED. J. S. LAY, Author of Constructive Work, &c.

England and Wales. With 20 Maps and over 200 Exercises. Sewed 4d. Cloth 5d.

The British Isles. With 32 Maps and over 300 Exercises. Sewed, 6d. Cloth, 7d.

MATHEMATICS AND SCIENCE.

Exercises in Mathematics. By DAVID BEVERIDGE MAIR, M.A., sometime Fellow of Christ's College, Cambridge. With Answers and Hints, 4s. 6d.; also without Answers and Hints, 3s. 6d.

THE TECHNICAL JOURNAL.—"This is a book which every teacher of elementary Mathematics should possess; he will find it a veritable gold mine."

Practical Mathematics for Technical Students. Part I. By T. S. USHERWOOD, B.Sc. (Lond.), A.M.I. Mech. E., and C. J. A. TRIMBLE, B.A. 3s. 6d.

NATURE.—"It is pleasant to read such a practical book as this one. The authors have dealt only with those parts of Mathematics which seemed to them to be of real value in practical work, and the whole book is pervaded by the spirit of Prof. Perry."

FOURTH EDITION. THOROUGHLY REVISED.

A Treatise on Differential Equations. By A. R. FORSYTH, Sc.D., LL.D., Math.D. Fourth Edition, thoroughly revised. 14s. net.

Key to Hall's School Algebra. By L. W. GRENVILLE, M.A. Complete. 10s. Also Parts I, II, and III. 6s.

A First Book of Chemistry. By W. A. WHITTON, M.Sc., Illustrated. 1s. 6d. [First Books of Science.]

A Manual of Practical Physical Chemistry. By FRANCIS W. GRAY, M.A., D.Sc., Lecturer in charge of the Physical Chemistry Department, Aberdeen University. 4s. 6d.

THE SCHOOLMASTER.—"This book should prove helpful both in day and evening classes, particularly as the subject matter covers a very wide sphere."

SECOND EDITION. COMPLETELY REVISED AND ENLARGED.

Principles of Metallurgy. By ARTHUR H. HIORNS, late Head of Metallurgy Department, Birmingham Municipal Technical School. Second Edition, completely revised and enlarged. 6s.

The Theory of Relativity. By L. SILBERSTEIN, Ph.D., Lecturer in Natural Philosophy at the University of Rome. 10s. net.

OCCASIONAL NOTES.

IT seems certain that the Defective and Epileptic Children Bill and Mr. Birrell's little Irish Bill will be the only pieces of educational legislation of any importance turned out this Session.

Parliament. The Education Bill will not be even introduced. Mr. Denman's School Attendance and Employment Bill, as we indicated in June, is doomed. Small additional grants only can pass Parliament this Session, but the early commencement of the next Session gives some hope that the larger grants which have been promised may become payable at the beginning of the next financial year. A cry of "Free Education in Danger" has been raised, but we cannot believe that there is any very serious peril. Section 5 of the Elementary Education Act, 1891, which the Northern Counties Education League regards as the charter of free education, was repealed by the third schedule of the Act of 1902, and the right to such education has since rested on the substituted clause, which made it the duty of the Local Authority to provide "a sufficient amount of public school accommodation without payment of fees." We agree with the League, however, that this clause is unsatisfactory. Some definition is needed. Does "sufficient" mean "sufficient for all who demand it," or "sufficient in the opinion of the Local Authority or Board of Education"? The statutory right of every parent to free schooling for his children, and the duty of every Local Authority to provide such schooling, ought certainly to be placed beyond all doubt and cavil.

MR. FRANK ROSCOE, we learn from the A.M.A., has been addressing the teachers of Durham on the Register. Doubtless he is imperfectly reported (he

**The Secretary
on the Register.**

can never have given Mr. A. D. Acland a knighthood), but, as he offered himself for a target, we should like to question some of his facts. As the pioneer of the movement for registration, the College of Preceptors alone is mentioned, but the College contemplated only the registration of secondary teachers, and it was the Teachers' Guild, in co-operation with the N.U.T., that first agitated for a Register of the whole profession, and it was on the initiative of the Teachers' Guild that Mr. Acland introduced "the former Registration Bill" (there were several). It is not the fact that "in 1906 the old Teachers' Register was declared to have been illegal from the start." It failed, moreover, not by reason of the composition of the Council, imperfect as that was, but because that Council had not a free hand, and could not alter, or even amend, the cast-iron conditions under which it worked.

BUT we will gladly leave the dead to bury the dead, and look only to the future. Mr. Roscoe assures us that the Register is alive and supported by every branch of the profession, but so far the elementary teachers, who must constitute two-thirds of the total, have contributed only some 16 per cent. of the 3,500 applicants. A vital point which the Council have yet to determine is when and in what form the printed Register is to appear. Mr. Roscoe calculates that ultimately it should include no less than 150,000 names, and that if such particulars were given as appear in the certificates issued to Registrars, this would require a volume or volumes of 4,300 pages, half as large again as the London Directory. But the Council may leave its successors to deal with a consumption not likely to be reached in this century, and Registrars will be disappointed, not to say aggrieved, if less appear than the bare record of attainments, &c., which in the certificates averages six lines. We cannot see what use it would serve to print a bare list of names.

**The Printed
Register.**

ON June 29 and the two following days the thermometer touched 90°, or nearly, in the shade, yet in the elementary schools work went on without any change. It is true that any intellectual effort became almost an impossibility, and that in most cases the children lounged through the afternoon at least. Still the pretence of teaching was maintained. It was heroic, no doubt, but it was not education. There is a limit to the principle that children should be taught to work under difficulties, and in this case we hold that the limit was passed. Here is one of the things which is managed better in Germany, where schools are dismissed when the mercury attains a certain level. This rule might well be copied in England. But why should we not go farther and alter the school hours during the summer term? Why should children always begin work at 9, whether the sun has been up for four hours or for one? In summer, schools might well open at 8, have a morning session till 12, with half an hour's play in the middle, and go on again from half-past 1 or 2 till 3, this afternoon period being devoted as far as possible to swimming, manual work, and organized games. In elementary schools at least, which draw nine-tenths of their pupils from within a radius of half a mile, early opening could cause no inconvenience.

**Schools in
Hot Weather.**

BUT it is not the elementary schools only which evoke our admiration or our pity. Secondary schools deserve a like tribute to their heroism. They too endure

Holidays in
July.

our fiercest heats magnificently—and to all appearance needlessly. July is certainly the worst month of the year for work, except perhaps August. Yet not only is the school term continued to the very end of July, but our chief school examinations are put in the same month. With a splendid indifference to external conditions teachers and scholars undergo the severest strain in the hottest weather. There is no particular reason for this. Schools might very well put their terms forward three weeks, and break up for the summer holidays about the end of the first week in July. Three weeks of September would be worth far more than three of July from the point of view of work. There should be no difficulty about the transference of External Examinations to the beginning of July. The only serious objection to the change is that it would entail a loss of three first-rate cricketing weeks. A heavy drawback, no doubt, but it really ought not to be allowed to outweigh the gain to work.

SCIENCE MASTERS and mistresses are the silent branch of the profession. They have to deal with things, not words, and they are not much given to the

Science and
Politics.

use of words. We are all the more glad, therefore, when a distinguished science master lifts up his voice in defence of his own subject. It is quite right that there should be schools where science occupies the first place. One such school is Oundle, which has just opened a new block of science and engineering buildings. The Head Master, Mr. F. W. Sanderson, to whose "inspired ideals" the Master of the Grocers' Company paid a tribute, is a believer not only in science for itself, but in science as formal training. In his speech he said that its correct study would enable boys to use intelligent methods when grappling with the social and political problems of the nation. This brings us face to face with the question we raised in these columns in June—the question how far training "spreads." Do people think more carefully about social and political questions because they have been trained to think carefully about chemical and physical problems? We believe that all intellectual discipline helps more or less to form habits of exact thought, but we see no reason for the view that the discipline of science is more helpful for the purpose mentioned than the discipline of literature and history. The gulf between chemistry and politics is too wide for training in the one to be very useful for the other. The methods of the exact sciences are of little value to the man who has to estimate the influence of laws on conduct or judge whether the season has come "to set the bounds of Freedom wider yet." The most that can be expected is that the boy brought up on science will think more exactly about the material and economic side of social questions.

MR. CHAMBERLAIN'S work for education in connexion with the Birmingham School Board and the foundation of Birmingham University would justify a reference to his death in an educational journal. But it is not of Mr. Chamberlain as an educationist, but of Mr. Chamberlain in himself that we are thinking. The

Prime Minister in the House of Commons spoke of him as a "new type of personality." Now "a new type of personality" is a rare figure in politics. In the nineteenth century there were, we think, six such in the first rank—Cobden, Bright, Gladstone, Beaconsfield, Parnell, and Chamberlain. These are the men who brought new ideas and new principles into politics; saw new visions; founded new schools; held up new ideals. The remarkable thing about these six original forces is that only one of them sprang from the great public schools, and he was the least original of the six. The great schools have sent a long succession of able men into politics, some of first-rate talents, but they have not produced original political geniuses or "new types of personality." The same phenomenon has been noticed in literature. The men who make a breach with the past and strike out for themselves into unknown country—the Carlyles, Brownings, and Merediths—are not the product of the public school.

WHY our geniuses turn up from any quarter rather than from our public schools is too wide a question to discuss in a note. Yet one remark we

Education and
Genius.

will venture to make, suggested partly by Mr. C. H. P. Mayo's article on the public-school Sunday, to which we referred in our last number. Mr. Mayo has a horror of loafing, and most schoolmasters, especially housemasters, share his horror. But genius needs to loaf; it wants some spaces of time when it can go its own intellectual way, wholly unchecked. If you stop loafing, you stop dreaming, and genius cannot develop without dreaming. Young men who are playing or working all day and every day cannot see visions. As Goethe said, character is fashioned in the stream of life, but genius is formed in solitude.

IN our last number we remarked that the practice of singing in schools seems to have little influence upon the practice of singing in the community. As it is with

Open
Windows.

singing, so it is with ventilation. Children have lessons in hygiene, and are carefully instructed in the evils of a vitiated atmosphere. They learn all about oxygen and carbonic dioxide. But this has but little influence on their habits in after life. The working classes have no active belief in the value of fresh air. At the meeting of the Association for the Prevention of Consumption this was the burden of many of the speeches. We do not blame the teachers; we have small belief in the value of mere instruction where hygiene is concerned, unaccompanied by the formation of habit. That instruction was forced upon elementary schools by the Board of Education acting under pressure from the doctors, as were, we may add, the generally condemned "physical exercises." But mere instruction does not influence the will. Much more hopeful than lessons in hygiene is the Women's Health Association, which is getting children to pledge themselves to keep their windows open at night. In the same way, the schoolmaster who can induce even half his class to use the toothbrush regularly is more useful than his colleague who can only give admirable lessons on dentition.

WE trust some means will be found to save the Mary Datchelor School from the threatened loss of the Clothworkers' Company's grant of £400 a year. The

**Mary Datchelor
School.**

history of the matter is this: the Board of Education has required the school to carry out a building scheme which will cost £15,000. The County Council has agreed to provide half of this, but the Clothworkers' Company, who manage the school, do not see their way to furnish the other half, and have consequently announced their intention to withdraw from the management. The position savours of comic opera. A school has poor buildings; therefore its income is to be reduced, so that it will have to engage inefficient teachers at inadequate salaries. Some way must be found out of the impasse. No doubt the school needs new buildings, but £15,000 seems a rather large sum. Certainly such a demand shows how much more highly bricks and mortar are valued in the work of a school than flesh and blood. Who ever heard of a school being threatened with extinction because it paid poor salaries?

THE Lancashire Education Committee is taking seriously the question of the falling off in the standard of "the three R's." They have approved a report of some length dealing with the subject, and making some important suggestions. Of these, perhaps the most far-reaching is the proposal that science, Nature-study, and colour-drawing should be taught only in those schools where a member of the staff is qualified to teach them, which is equivalent to saying that they should be taught only if they can be taught well. We do not know why the recommendation should include only science and art; history might well be added. Some drastic measures will certainly have to be taken with the curriculum; it is hopelessly overloaded. Subjects are taught by men and women who have only the most superficial knowledge of them. The result is sometimes cram, but probably far more often mere "chalk and chatter." The Lancashire report is valuable as a recognition of the facts that our elementary education is becoming too pretentious, and that the first duty of the schools is to lay a solid foundation.

WE have just passed "the roaring moon" of examinations, and many good teachers are feeling sore and angry. They resent examinations as an interference with their *Lehrfreiheit*. When-

Examinations. ever an enthusiastic schoolmaster reads a paper at an educational meeting on his pet subject, he demands two things as absolutely necessary to progress; the first is the abolition of books and the second the abolition of examinations. We sympathize with the ardent teacher, but we can only advise him to possess his soul in patience. It is not likely that examinations will be swept away, and it is not desirable that they should be. They give point and aim to school work, and they supply a much-needed stimulus to the many children who are not possessed with a thirst for knowledge. The absence of a definite objective for school work would be a heavy handicap to both teacher and taught. For one form that would gain ten would suffer, and in too many classrooms aimless talk would take the place of solid work. The abolition of examinations in elementary schools has been by no means an unmixed gain. Let secondary teachers aim at improving the popular tests rather than doing away with them.

THE pamphlet on Greek at the Perse School issued by the Board of Education gives us a picture—not always very clear in outline—of how the language

**Greek at the
Perse School.**

is there taught by means of oral work—reading, paraphrase, summary, and other free composition. The boys begin Greek at fourteen, after having learnt French and Latin on the same system for about four and two years respectively. They have at first a lesson of three-quarters of an hour every day; later on they get some seven hours' Greek in the week. Some remarkable results are achieved. Of five boys who formed the Remove in one particular term, four won open scholarships, two of them at the age of seventeen. The specimen compositions reach the level of the best public school Sixth Form. At the same time, we are told very little about the achievements of the rank and file. Under the old system it is no uncommon thing for able boys who begin Greek late to reach scholarship standard in three or four years; it is the average boy who so constantly fails. The Report certainly shows—though even this is no new discovery—with what ease boys learn a third language when it is taught by the same methods by which they have already acquired two. In one point the pamphlet is disappointing. We read nothing about the study of Greek history or of Greek thought. We are told, indeed, that one of the aims of the school course is to help boys "to appreciate and enjoy the literature," but that does not tell us very much. The impression left upon our minds—perhaps a wrong one—is that *Sprachgefühl* is what is aimed at, almost to the exclusion of everything else.

A STRONG appeal on behalf of the Art for Schools Association is being made by the President, Sir Sidney Colvin, Mr. Lionel Cust, and Miss Lyttelton.

**Pictures for
Schools.**

Subscribers have fallen off, doubtless under the impression, partly justified, that the work which the Association initiated is now adequately performed by commercial firms who cater for schools. But a new and important phase of the Association's work has since been brought into being. Thanks to the friendly offices of the Victoria League and other sympathizers, school managers and teachers in the dominions beyond the seas, the Colonies, and even in India, have begun to consult the A.S.A. as to suitable prints and wall-pictures, and to plead for donations for poor schools. Such applications have been received from the Transvaal, Rhodesia, Cape Colony, Canada, Australia, and New Zealand. Unfortunately, the finances of the Association are wholly unable to meet these new demands, and it is in urgent need of £500 to clear off liabilities and pursue its work of educating the children both of Britain and of Greater Britain by familiarizing them with works of art and beauty. Subscriptions and donations should be sent to the Secretary, A.S.A., The Settlement, Tavistock Place, W.C., where the Association's pictures are on view daily from 11 to 4.

THE Fourth International Congress on Home Education will be held in Philadelphia from September 22 to September 29, under the patronage of the President of the United States. Secretaries have been chosen in most of the countries of Europe. The Honorary Presidents include M. Lavis, Director of L'Ecole Normale, Paris; and M. Liard, Rector of the Academy of Paris. Sir Robert Blair, Educational Officer of the L.C.C., is a vice-chairman.

LOCAL AUTHORITIES.

It is gratifying to reflect that, after disregarding the physical condition of children compelled to attend school for many years, we have at last awakened to the fact that it demands serious attention. It is not to be supposed that this new development of

public service can be inaugurated without difficulties, disappointments, and mistakes; on the other hand, it is probably wise to recognize that it is a service capable of the widest extension, and that such extension is inevitable. If it is to be worth doing it must, ultimately, be done thoroughly, for it is a case where half-hearted measures must prove almost entirely unproductive. These observations are suggested by the able report of Dr. George A. Auden, the School Medical Officer to the City of Birmingham Education Committee. The year under review, he says, has been marked by two notable advances in the direction of treatment—viz. the initiation of dental treatment and of a scheme for operative treatment of tonsils and adenoids. Further, the treatment of certain minor external ailments has been tentatively begun in various sub-centres. These developments, Dr. Auden suggests, may be said to mark the close of the first phase of the evolution of the school medical service.

REVIEWING the development of the School Medical Department

since its inception in September, 1908, it is shown that the staff, excluding the School Medical Officer, has increased from three assistant officers and three school nurses to six of the former and nine of the latter, and the service is now organized to secure a regular sequence of effort—viz. (1) medical inspection of children on entering and leaving school; (2) following up of individual children found defective and facilities for special examinations at the clinics and in the schools; (3) the special recording of tuberculous, epileptic, physically handicapped, and ringworm cases; (4) treatment of eye defects, teeth defects, tonsils and adenoids, ringworm and external minor ailments; (5) the general guidance in the choice of a suitable work on leaving school. As Dr. Auden says, while there exist gaps and weak places in the scheme as outlined, the provisions form a framework which can be strengthened where experience shows the need. "The first stage of development has been constructive, the second must be co-operative, and every effort must be made to correlate the work of the school medical service, not only with the general march of educational administration, but also with all the ameliorative agencies which are already at work in dealing with child life."

THE report contains the results of a detailed inquiry into the

question of the employment of school children out of school hours. The returns show that 9,131 children were employed: 5,748 in running errands, 1,825 as domestic helps, and the remainder in various other occupations; while 2,012 children were employed under 10 hours a week, 2,585 were working between 10 and 20 hours, 2,145 between 20 and 30 hours, and 1,725 between 30 and 40 hours; the remainder being at work (in addition to the 27½ hours a week in school) for still longer periods. This condition of affairs, it is pointed out, renders nugatory much of the ameliorative effort of the Education Committee. It is suggested that if by-laws are proposed to regulate this employment the question of the systematic carrying of heavy weights by children and young persons merits very careful consideration. Regarding the difficulty of enforcing a by-law on this point, owing to the variation in physical development of children of the same age, Dr. Auden proposes, as a satisfactory basis, a standard proportion between the body weight and the weight permitted to be carried. A convenient proportion would be, he says, one-third of the body weight for boys and one-fifth of the body weight in the case of girls.

IN a prefatory note to the Report of the School Medical Officer

for Leeds, the Secretary for Education points out that, during the past five years, the medical inspection of school children in Leeds has entailed an expenditure of £9,611, towards which the Government contributed a sum of £873. This condition of affairs, which is not, of course, peculiar to Leeds, is a standing grievance of Local Authorities. Dr. Algernon Wear, the School Medical Officer for Leeds, is able to report that the number of cases treated as the result of the routine medical inspection are, on the whole, satisfactory. The total percentage, however, is not quite equal to that of the previous year, being 69.9 as compared with 72.2. He regards as the most unpleasant feature of his record that 28 per cent.

of the children examined were in a dirty or verminous condition, a state of things which is not only deplorable, but preventable, and one from which much ill-health and consequent loss of mental efficiency result.

THAT medical inspection is of little value unless the children who

West
Sussex.

are found to have defects are treated is generally recognized, and in cities and urban areas it is not difficult to organize the necessary facilities. It is, however, a much more troublesome and costly business to provide remedial opportunities in administrative counties. The West Sussex Education Committee has devoted some attention to this question, and has adopted a comprehensive scheme providing for the further examination of defects of eyesight, the operative treatment of adenoids and enlarged tonsils, dental treatment, the X-ray treatment of ringworm, and of minor ailments such as common skin diseases, discharging ears, minor external diseases of the eyes, and uncleanness associated with pediculosis. The scheme provides for the appointment of an additional whole-time medical officer, a whole-time school dentist and six school nurses, and for the establishment of five school clinics. It appears, however, that the Committee proposes to utilize private surgeries as well as school clinics—an arrangement which is not favoured by the Board of Education. The Board is also of opinion that the proposed rate of payment of £2. 7s. per case for operative treatment in cases of adenoids and enlarged tonsils is excessive, and they decline to sanction it. At the meeting of the Committee the Chairman of the responsible Sub-Committee thought it was most unfortunate that the Board of Education should object to the payments to the doctors and hospitals, and their intervention in arrangements carefully considered by responsible people fully acquainted with the local circumstances appears to be untimely and ill-advised.

AT a recent meeting of the Truro and Falmouth Education Com-

Elementary
Education.

mittee there was some discussion on the results of the national system of elementary education. One of the members said he had met a family of seven brothers not one of whom could read or write. Another witness said that, of eleven boys who had passed the seventh standard, three only were able to spell "Jeremiah." The Chairman related that, on the bench where he presided, he frequently had the shame of seeing witnesses unable to read the terms of the oath printed on a big card. A representative of the teaching profession who, presumably, spoke as an apologist, said he had a boy in his school whom it took two years to teach to count 20. He also knew of a boy who took seven years to learn the alphabet, but who turned out to be one of the greatest men in America. By way of summing up the debate, the Rev. F. F. Savage is reported to have remarked: "I think this is a strong argument in favour of the reduction of teachers' salaries."

AT the June meeting of the Lancashire Education Committee a

The Lancashire
Inquiry.

further report was presented concerning the curriculum of elementary schools and the educational progress of children. It will be remembered that a report was issued on this question about twelve months ago and referred to a Sub-Committee. The Sub-Committee has conferred with head teachers of elementary and secondary schools, H.M. Inspectors, and has also addressed inquiries to a number of employers. It is pointed out that on January 31 there were 151,260 children in the elementary schools maintained by the Authority. Of these 4,727 (3.13 per cent.) were thirteen years of age, 346 (.23 per cent.) were fourteen, and 23 (.01 per cent.) were fifteen years of age. Put in another way, there were about 17,000 children of eleven years of age. If none had previously left school this number would have left at, say, fourteen years of age. Instead of 17,000 there were 369. This is due to exemptions under the attendance by-laws, and, it is stated, no resolution has been received from any Local Area Committee in favour of the abolition of the exemption certificates, but some recommendations to make them more easy of attainment have been rejected by the County Committee.

THE evidence before the Committee leads them to the conclusion

General
Conclusions.

that children have a more general interest in their lessons than formerly, possess a wider outlook, and are consequently more intelligent. The introduction in the upper standards of woodwork and gardening for boys, and of domestic subjects for girls, has been, it would seem, an undoubted advantage. It, however, appears to be the opinion of a considerable number of those who are qualified to give a sound opinion that there is not the degree of thoroughness in

reading, handwriting, spelling, and arithmetic which it is necessary the scholars should possess when they leave the elementary schools. Irrespective of the question whether there has or has not been deterioration, it seems to the Committee to be desirable that greater stress should be laid upon the need for a high standard of efficiency in these essential subjects. The Sub-Committee makes a series of recommendations regarding teachers, time-tables, school methods and reports, which will no doubt prove of assistance in securing the object in view.

THE deputation representing the Association of Chambers of Commerce, which was received privately by the President of the Board of Education, voiced the opinion of the resolution passed at the Annual

To revive Examinations. Meeting, to the effect that all elementary schools, where the work is on inspection found to be unsatisfactory, should undergo a full examination by the Board's inspectors in the year following, and yearly until the Board is satisfied with their work. It is doubtful whether the Board would be prepared to adopt this stimulus to effort, but it is stated that in his reply to the deputation Mr. Pease "fully reviewed the position," and that his visitors were satisfied with the response made to their representations.

AN interesting report on the after careers of County Council University Scholarship holders, 1894-13, has been issued by the County of Salop Education Committee. It is recorded that the award of scholarships commenced in 1891, when a modest sum of three guineas was given for dairy instruction. The sum has now grown to an average of £4,600 per annum. Since 1894 the County Council has awarded 58 scholarships and 15 exhibitions, each of the value of £50 per annum, tenable for three years at some approved University. Regarding the professions adopted by the scholarship holders, 33 per cent. were scholastic, while engineering, chemistry, and agriculture have each taken 8 per cent.; medical and clerical are both credited with 7 per cent., and the Civil Service 4 per cent. One of the former County scholars is one of H.M. Inspectors of Schools and another an Inspector of Factories.

SCIENCE NOTES.

THE Annual Report of the Director on the work of the Science Museum and of the Geological Survey and Museum has just been issued, and it is of interest to note the increasing usefulness of the "Teaching Collections." The records for 1913 show that, while many class visits called for no help from the Museum staff, special services were given in connexion with 2,822 school pupils in 155 classes. It may be mentioned that some of the objects may be removed from their cases for demonstration either in the galleries or in one of the small classrooms attached to the Museum. From our own observation, recent discussions among science teachers appear to favour an extension of the small classroom method, but without superseding the general survey, which is possible only in the gallery itself.

WE believe that in the medical profession it is regarded as a sin against professional ideals and practice for a new treatment to be successfully adopted without publication in medical journals or societies; thus individual experience is brought into the common stock, to the benefit of all. We think that science teachers would show equal readiness to share with their *confrères* the advantages of new methods of demonstration if more facilities for publication and criticism were easily accessible. Perhaps the Education Society recently founded by the Teachers' Guild will take up this question, which, of course, affects all branches of the curriculum, although the need is most evident in science.

THE current issue of *Science Progress* contains a variety of articles, and is of special interest to geologists and bio-chemists. Mr. Arthur Holmes discusses the distribution of radium and other radioactive elements, and it is interesting to note that thorium is probably as effective in warming the earth-crust as radium, in virtue of the greater abundance of the former metal. It has long been known that, if the whole interior of the earth were as radioactive as the

outer layers, the earth would be rising in temperature—indeed, it could never have cooled. The existence of radium emanation has been demonstrated in the sun's chromosphere and in certain stars, so that there is fairly strong evidence that radioactivity is not inhibited by a temperature of 6,000° C. Mr. Holmes favours the view that the percentage of radium, uranium, &c., diminishes as the depth below the surface increases.

THE Royal Society of Edinburgh, and Prof. C. G. Knott individually, are to be congratulated on the response made by educational institutions and by individuals in all parts of the civilized world to their appeal for a worthy celebration of the tercentenary of John Napier. By exhibits of historic apparatus and relics, including "Napier's Bones" (numbering rods), and by demonstrations of the latest calculators, the advance made in three centuries was shown in a striking manner. The number of foreign savants present testified to the importance of the celebration.

SIR CLIFFORD ALLBUTT has done well to publish an account of the influence of Bernard Palissy in promoting by brilliant example the method of inquiry by inductive reasoning, experiment, and observation. After the Greeks, the real founders of the experimental method of inquiry were Roger Bacon, Bernard Palissy, Gilbert, and Galileo. While ranking high as a literary artist, Francis Bacon has no claim to respect as a man of science. Palissy's triumph as a potter is one of the dramas of human history: it is realized by few that this great artist was a discoverer and teacher of quite the first rank in chemistry, mineralogy, geology, and agriculture. Born in 1519, he was cast into the Bastille as a dangerous heretic at the age of eighty. He endured a year's imprisonment before death effected his release.

THE July number of *The Illuminating Engineer* contains the interim report of the joint committee founded by the Illuminating Engineering Society. This Committee reported in 1913 on the Artificial Lighting of Schoolrooms, and now deals with the more complex question of the Daylight Illumination of Schools. The report contains much careful work, and we hope will be widely read. First in a summary of suggestions is "No place is fit for use as a schoolroom when diamond type cannot be read easily by a normal observer at a distance of half a metre (20 inches)." In connexion with this and other suggestions, the Committee desire considerable numbers of confirmatory tests. The subject is one to which we would again direct the attention of science teachers, especially of those desiring to undertake useful research in a subject connected with physics on the one hand and school hygiene on the other.

THE TEACHING OF CIVICS FOR THE FUTURE CITIZEN.*

By CLAUDESLEY BRERETON, M.A.

THE late Michel Bréal, in one of his lectures on "Semantics," indicated the wide range of meaning that the word *civitas* and its derivatives have undergone. Originally signifying the individual inhabitants of a town, or the body of citizens, it has successively denoted the community, the State, citizenship, the franchise, the city (French *cité*) in all its metaphorical, cultural, and material senses, including that of a mere collection of buildings. Now it seems to me, if we are to avoid the not uncommon mistake of making the teaching of civics to mean mainly instruction in the mere machinery of government, we must interpret it in the largest sense of citizenship, whether local, national, or even imperial. We want, in a word, to foster in our schools some sort of local, national, and even imperial patriotism, and, when I use that much abused word "patriotism," I use it essentially in its positive signification; that is, of feeling a pride and interest in one's locality, or in one's country, which does not necessarily connote a contempt, or even a dislike, of one's neighbour's. A Devon

* A paper read at the Conference on "The Next Steps in Education," at London University, on June 19, 1914.

who is proud of Devon need not necessarily, and does not as a rule, despise other Englishmen. There is no harm in thinking one's native place the finest in the world, or at least in loving it the best, provided one thinks that others are also fine. Such comparisons are not odious so long as they do not deepen into contrasts. A Frenchman once said to an Englishman, "If I had not been born a Frenchman, I should like to have been born an Englishman"; and the Englishman replied, "If I had not been born an Englishman, I should like to have been born one." These two sayings illustrate in a nutshell the proper pride I am advocating here, and the pride which all teachers of true patriotism should avoid.

At the present time the need of civic instruction seems on the increase. No country is more sensitive to coming world-changes than France, and civic instruction has for some time been a branch of moral teaching in that country. At the first it was far too abstract, dealing mainly with such subjects as the machinery of government, the *suffrage universel*, the ballot, and the political organization of the country. Now, as moral instruction in France has become less individualistic and more social in character, civic instruction has, I believe, been largely absorbed into the general teaching of morality, which itself has been shifted on to the more secure basis of solidarity as its fundamental doctrine.

I should be the last person to wish to see a wholesale copying of the French program in England. What is important is the spirit of the matter. A Japanese once said to me, when explaining the extraordinary tolerance shown by the Japanese to Shintoism, Buddhism, and Christianity, "We do not trouble much what dish we eat off provided the food is to our taste." I think we should be equally tolerant towards the dinner service employed in education. So, while some Local Authorities may desire a definite scheme of moral and civic instruction, others might very well prefer to leave it to the class teachers to incorporate it in their simple Bible teaching, in which the teacher has by tradition established to a certain extent the right of having heart-to-heart talks with the children, which is not always so easy in other subjects. Not that the spirit of civism should not penetrate to other subjects, but in many cases the traditions are not ready to hand as in the case of the Scripture lessons. Civics is, in fact, no novelty in our schools. And I should like here to emphasize our great, our enormous, debt to the elementary teachers in our big towns. It is thanks to them, and them in the main, that our lost ends and slum lands in general have not become Bowerys and Alsatias.

One or two secondary schools throughout the country are giving their pupils definite courses in social science and civics, notably the William Ellis and the Northern Polytechnic, and I would mention that the Head Master of the former is about to publish the results of twenty-five years' teaching of the subject. I cannot help feeling that many of our large secondary schools would be all the better in their upper classes for certain definite discussion of social and civic questions, such as figure in the philosophy program of the second year of the French *baccalauréat*. That the younger generation in England are evidently athirst for such knowledge is shown by the fact that the history schools in the two Universities of Oxford and Cambridge contain in each case nearly double the number of students compared with those in any of the next most popular schools, the Classical, Science, and Mathematical.

And now let me come back to my first thesis, the need of fostering local as well as national patriotism. There are many reasons for such a policy. First, because the citizen should not be merely a voting machine. He should take an intelligent interest, if not an active part, in the civic life of his locality. We have somehow got to restore to a far higher degree the sense of *community* in this country. We cannot expect, even in these days of scientific labour-saving, to get our citizenship duties entirely done by deputy. Again, I am more and more convinced that, with the average pupil of only average imagination, the astounding ignorance he shows after leaving the secondary or elementary school is due to the fact that the knowledge which he is supposed to have acquired has never really been *realized* by him. By memorizing, he retains portions

of it for awhile, but, having no abiding root in his experience, it drops out more or less completely. Our problem in the future is to make the pupil realize his knowledge, and this is best done by linking it, when possible, to the concrete surroundings of his daily life, or by making it appeal to his sense impressions by objects, pictures, and diagrams.

To take an extreme instance, it is little good giving a lesson on the river system of India to a child who has never seen the Thames or any other river. A very skilful teacher—and only those who have seen our teachers at work know how skilful they can be—may very well interest the children in the subject at the time; but the average child, even if he has understood for the moment, soon forgets unless there is some concrete underpinning of his knowledge.

It is just this concrete underpinning that, in the earlier stages, is so essential to the teaching of civics. Nearly every locality has, at some time or other, had its glorious moments in history, and to bring these home to the children I know of no better means than the school pageant when based on local history, which also possesses the inestimable benefit of getting the children who take part in it to co-operate for a common aim. Only two years ago, one of the Council's secondary schools in Hackney gave a pageant dealing exclusively with Hackney. I am not ashamed to confess, as a non-Londoner, that I had no idea that Hackney, whose name suggests rather the dull and the trite, had had such an illustrious past. In every child who acted in that pageant—entirely, be it noted, composed and designed by the school staff—the civic spirit, that draws not a little of its strength from a conscientiousness of the past, must have been inevitably quickened. For remember there are two communions almost equally important to the civic spirit—the communion with the past, whether it be with saints or with heroes; and the communion with the present, with our fellow citizens.

This communion with the past may be further fostered by visits to places of historic interest within the area, or if subsequently a larger area like London itself be taken, it should embrace visits to the principal public buildings and also to the museums and picture galleries which are at length being treated as treasuries of historical documents instead of as national lumber rooms and curiosity shops. Perhaps one day we may see in our schools, whether in Leeds or Liverpool, a Leeds day or a Liverpool day according to the area in which the schools are situated. If Empire day is supposed to be so productive of good, why should not a Leeds day or a Liverpool day within their respective areas be equally efficacious? What the young imagination conceives, abides as a memory in the old.

Visits to places of public interest, and history—and to a less extent literature—should help to form, with or without direct lessons on civics, that larger patriotism known as national. Here, again, the history, by means of simple dramatizations or *Realien* facsimiles of original documents, pictures of costumes, events, &c., should be made as real to the child as possible. It is, in fact, just in such matters as the illustration of history that the much abused cinematograph might be utilized for reproduction of historical scenes and pictures. There are, however, some real lions in the path as far as history is concerned. It is, I feel convinced, whether for good or ill, likely in the near future to lose its present somewhat rigid stratified form and assume the far more difficult and unstable aspect of past politics, as Lord Acton called it.

We are beginning to see that the last word does not rest with the Whig historians, who dominated the seventies and eighties of the last century, and to whom Parliamentary history seemed nearly the end-all and the be-all of national history. Sociology is more and more coming to the front. Again, there is a growing feeling that history has been written too much from the point of view of the *classes dirigeantes* rather than of the working classes. I could imagine, for instance, that a history of England as issued by the Fabian Society would be somewhat different in tone, spirit, and conclusions from that of Macaulay or Gardiner. The day that democracy demands that the history taught in our schools should take a larger account of democratic movement, I fore-
